FROM the way in which huge American railway bond issues are over-subscribed as soon as they are offered, to say nothing of the avidity with which the investment market is eating up domestic bond issues of all sorts and of the readiness with which American capital is supporting foreign loans, it might be thought that the United States was in an excellent position to finance her own development and to have something left over to finance undertakings in foreign lands. British readers might very well receive such an impression from their perusal of the cable dispatches from New York. But so eminent a representative of London financial opinion as *The Statist* tries to assure any Britishers who may be worried about New York's increasing importance as a financial center, that this is a case where appearances are extremely deceiving. In fact, *The Statist* goes so far as to assert that America hasn't even the capital requisite for the proper development of her own resources, and is far from being in a position to offer vast sums for the development of foreign states. The fact that American financiers are ready to lend millions to Holland and Peru is taken not as a sign of the healthiness of American finance but rather of the unhealthiness of American trade. As *The Statist* sees it:

The country which came out of the War in a better position than any of the belligerents, that is to say, with her resources strained to only a very moderate extent, has an abnormal number of unemployed, and the capital in the hands of the banks and trust companies which is usually employed in financing the international trade of the country, is seeking employment in investment to an unprecedented extent. So far as the financing of the railroads is concerned, in a sense it is good; but it is by no means evident that the United States is as yet in a position to finance her own transportation facilities, in addition to financing her trade, to the mutual advantage of herself and her customers.

When it comes to financing Holland and Peru, it is significant rather of the state of American trade than a healthy sign of the development of American finance. In a sense, the financing of Holland to the extent of only ten millions sterling should work out in a highly satisfactory manner. Holland can readily pay the interest in the form of European exports; and, in addition, she will be able to acquire means whereby she should, in due time, be able to purchase the loan. A loan to Peru, moreover, for ten millions should be advantageous to Peru and to the United States. Peru, or that part of it which has so far been opened up, is a mineral zone of extraordinary richness. Assuming that the money is used for the purposes of opening up Peru's mineral zones, the United States should acquire on exceedingly reasonable terms valuable supplies of minerals with which she could not supply herself on equally favorable terms from her own resources, assuming that she possesses the particular minerals which it is proposed to open up in connection with those loans.

Finally, however, the reader will bear in mind that neither the present popula-

"I Want These Checks because they are positively safe"

"I can't carry a check protector around in my pocket, and, anyway, if I could, their ingenuity would not give me the positive protection against loss through fraudulent alteration that insurance will. Insurance beats ingenuity. That is demonstrated every time a fireproof building burns or a check is raised."

Go get these checks, today. Tell *your* banker you want this positive protection.

Thousands of progressive bankers all over the country have provided these checks for their depositors without any charge for the added protection. Ask your banker for the positive protection of these *insured* checks or write for the name of one in your locality who will gladly accommodate you.

Banks providing Super-Safety Insured Checks give depositors, on request, a vest-pocket insurance policy as illustrated in the circle.

What is the Value of Balance in a Ball?

A BALL only ten one-thousandths off balance may twist to one side enough to miss the cup entirely on even less than a six foot putt—and not be the fault of the player at all!

Until this year about 80% of all balls were enough off center to be the cause of multitudes of missed putts. But that dread need no longer bother those who play the Master Balanced Ball—it must putt true. It can't help it if the putter strikes it squarely.

That's what the balanced feature does—Master Balls are always the same—always accurate. The process that guarantees this accuracy is patented. Master Balanced Balls are \$1 each. Ask your Pro or Dealer. (MACGREGOR 1.62 Dimple and Mesh Marking now only 75c.)

Any one or all of the following booklets will be gladly sent free upon request:

1. "Golf, the Game of Games" (An introduction to golf).
2. "Stepping Stones to a Golf Course" (Helpful suggestions for laying out a new course).
3. Complete General Catalog.

"That wasn't your fault—the ball didn't run true. Try this Master Balanced Ball—it's bound to hold its line."

INVESTMENTS AND FINANCE Continued

tion of the United States, nor the development of the resources of her immense area, seem to indicate that she is in a position to offer vast amounts of capital for the development of the foreign states of the world, because she has already exhausted, so far as our present knowledge goes, her capacity for developing the resources at her own door.

In other words, London is still the world's investment center. To this much there are Americans perfectly willing to subscribe. A New York banker who has recently been studying financial conditions abroad is reported on the financial page of the *New York Times* as saying that on any investment business "which London really wants the bankers there can underbid New York by a full point." He attributes this, we read, "first, to the extreme easiness of money in London; second, to the splendid market for gilt-edged bonds abroad; and third, to the fact that the British investing public has had a longer and much more thorough investment education than American investors, altho it is added that the size of the field here, as compared with that of England, largely offsets the last-named advantage."

WE TOOK OUR TIME TO REPAY OUR WAR DEBT TO FRANCE

THOSE Americans "who are impatient for France to pay her debt to the United States forthwith are not controlled by the spirit of leniency which that country showed the United States when France was America's creditor," observes the *New York Tribune*. Besides lending valuable and essential military assistance, the French Government loaned the infant Republic of the Western World a large sum of money and also underwrote a Dutch loan to the United States. And, instead of pressing the United States for payment when the money was due, "France spread the payments of the principal over a period of many years and voluntarily remitted the interest for the first five years. Recognizing frankly the inability of the United States to comply with the original terms, she generously changed them and adapted her policy to the financial capabilities of her creditor."

In view of the fact that our Allied Debt Refunding Commission is now at work, *The Tribune's* review of the history of the repayment of our loan to France is most timely:

During the period from 1778 to 1782 the French King loaned a total of 18,000,000 livres [equivalent to francs] to the United States. In the original convention it was agreed that this money should be repaid with 5 per cent. interest by January 1, 1788. In a subsequent treaty made by Benjamin Franklin in 1782, however, it was provided, "considering that the payment of so large a capital at the one stipulated

period may greatly injure the finances of the Congress of the United States, and it may perhaps be even impracticable on that footing," that the King of France should defer payment until three years after the signing of peace, and that it should then be made in twelve yearly instalments.

Furthermore, "His Majesty, being willing to give the said United States a new proof of his affection and friendship," was "pleased to make a present of and to forgive the whole arrears of interest to this day, and from thence to the date of the treaty of peace."

The French King also agreed to defer the payment on a loan of 10,000,000 livres from the Dutch which he had underwritten, and which he agreed to repay Holland and not require the United States to repay him for five years. A new loan in 1783 contained the stipulation that the principal should be paid, commencing in 1797.

The financial affairs of the United States, however, went from bad to worse under the Congress of the Confederation, and soon interest and principal alike went unpaid. Not until Hamilton reorganized the finances under the new Constitution was payment resumed. Then in 1783 Jefferson was able to write to the American Minister in France that "in the course of two years, by unceasing exertions, we paid up seven years' arrearage and instalments of our debt." Part of this was done in cash, part in kind and part in assistance to the French in Santo Domingo. "In the year 1795," wrote the Secretary of State, "the whole of our debt was discharged," altho the last instalments were not due until 1801, or twenty-three years after the first advances on the loan were made.

IS OUR STEEL-MAKING CAPACITY OVER-EXPANDED?

THERE are pessimists who are skeptical about complete industrial recovery this fall, because they feel so strongly that our productive capacity is overbuilt. "Purchasing power may increase," the Alexander Hamilton Institute in its May Letter represents them as saying, "but not enough to absorb the full production of the country's potential output." This, says the Institute, may be true of some lines, but not of others. For instance,

The steel industry has increased 100 per cent. in production capacity during the past decade. The copper industry has increased over 60 per cent. and rubber production 270 per cent. since 1913. Petroleum production has increased 76 per cent. and bituminous coal production 21 per cent. On the other hand, anthracite coal production has increased less than 10 per cent. and cement only 11 per cent. The production of lumber, brick and cotton is less than before the war. Grain production shows little change.

But another competent financial authority, the American Exchange National Bank of New York, flatly denies that steel is really overbuilt. "We are told that the steel industry as a result of war expansion is now far ahead of the consumptive capacity of the country." "This statement is simply not so," the bank replies in a current bulletin, and it goes on to support the statement as follows:

There was some over-expansion in the

Lithographing and Printing-from-Steel

YOU have a certain feeling of respect and admiration for the letterhead that is lithographed or printed from steel. The effect is so much finer, richer, more dignified. There is conveyed an impression of stability—reliability.

These processes are brought to their highest stage of perfection in the Mann factory. Many banks and fine business houses have been using Mann lithographed or printed-from-steel letterheads for more than half a century! One advantage of either of these two processes is that, in quantity production, costs are surprisingly low.

Specimens of Mann lithographed and printed-from-steel letterheads will be supplied on request, together with prices and other information. We will be glad, also, to submit special designs for your own letterheads, if desired.

Continued

character of equipment and facilities needed for the production of munitions, but there was no over-expansion at all in the fundamental processes of the industry, and the expansion in the particular fields has either been written off or converted to peace uses. Measured by the highest consumption of pig-iron in the war period, including 1919, the capacity of the steel industry of this country is to-day approximately what it would have been as a result of a normal rate of increase if there had been no war. Pig-iron consumption in 1913, the record consumption to that year, approximated 30,000,000 tons; in 1916, the peak year of the war period, consumption approximated 39,000,000. The normal annual rate of increase in consumption during the period between 1899 and 1913, according to the Harvard Committee on Economic Research, was about 1,130,000 tons. At that rate of increase the normal consumption for 1922 should call for approximately the maximum production reached in the biggest war year, 1916.

Like everything else, of course, steel consumption will be affected this year by general trade conditions, but it is apparent that there has been no important over-expansion in the steel industry, even when the destruction of productive equipment and resources in other parts of the world is left wholly out of account. The general acceptance of the idea that over-expansion had taken place in the steel industry illustrates our readiness to believe everything we hear without taking the trouble to question the knowledge or judgment of those whose conclusions we accept. We all ought to remember the rationing system set up during the war, under which only essential industries were able to obtain steel. That system forced the deferment of normal consumption of steel in many fields and made it possible for the industry to meet the extraordinary demands of the war. The war demand for steel was therefore at least partly met by forcing a decrease in the demand in other directions and was not wholly met by undue expansion in capacity.

The relation of steel to human progress is now fundamental. Steel contributes to our welfare in countless ways, of which most of us are not even cognizant. We use steel in everything from a battle-ship to a mouse-trap. But for the tools and machinery which are made of steel, the world would still be a wilderness.

"Old Town Canoes"

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. C. D.," Roanoke, Va.—"Kindly tell me what a native of Panama is called."

A native of Panama is a *Panamanian*.

"A. J. R.," Bloomington, Ill.—The name *Guitman* is pronounced *gi'tar-man*—i as in *police*, 's as in *final*.

"F. T.," New York, N. Y.—"Is there any authority for *handkerchiees* as the plural for *handkerchief*?"

The Lexicographer can find no authority for the form *handkerchiees*. The correct plural of *handkerchief* is *handkerchiefs*.

"A. S.," Marysville, Mich.—"Can you tell me the origin or history connected with the famous and, nowadays, much mentioned remark made by the Governor of North Carolina to the Governor of South Carolina?"

The story goes that the Governor of South Carolina had made a requisition upon the Governor of North Carolina for a prisoner which the Governor of North Carolina refused to honor. Some time later the two gentlemen met on a neutral estate and spent a congenial time together. In the course of the conversation, the Governor of South Carolina, seeing an opportunity to bring up the subject, remarked, "Governor, how about that req—?" which immediately prompted the Governor of North Carolina to say, "Governor, it's a long time between drinks," and thus he headed off all further discussion of the requisition.

"J. J. K.," Uniontown, Pa.—"To decide a matter, please advise how the United States acquired the Philippine Islands."

The *Philippine Islands* were ceded to the United States as a result of the Spanish American War. The *New International Encyclopedia* says: In the treaty signed Dec. 10, 1898, Spain ceded the entire archipelago to the United States, and that country agreed to pay Spain \$20,000,000, five Spanish ships and merchandise admission to the islands on the same terms accorded to American ships and goods for a period of 10 years, and transport to Spain the Spanish soldiers captured at the surrender of Manila. The treaty was submitted to the Senate of the United States Jan. 4, 1899, and it was ratified February 6."

"C. W. N.," Jackson, Mich.—"Please give me the meaning and pronunciation of '*persona non grata*.'"

The phrase means "one who is not thus acceptable," and is pronounced *persona, per-so'na*—as in *over*, o as in *go*, a as in *final*; *non*, non—o as in *not*; *grata*, gra'ta—first a as in *art*, second a as in *final*.

"R. W. V.," Philadelphia, Pa.—"In the dictionary a *mechanic* is defined among other things as 'An unintelligent workman.' Please explain this."

A *mechanic* is primarily "one who exercises a mechanical employment." He is an artisan; a handicraftsman, and in this sense he is recognized as a skilled workman. But long ago the term was used in a derogatory sense in English literature to designate an unintelligent workman, a low or vulgar fellow, and is to be found in such sense in Shakespeare, "*Coriolanus*," 1607; in Horne's "*Discovery*," 1768; and in Scott's "*Fair Maid of Perth*," 1828. An English Dictionary, dated 1700, by "B. E.," defined the term *mechanic* as "A mean, contemptible fellow."

Because the word *mechanic* was used in this way, the meaning to which you direct attention was recorded in the dictionary.

"F. J. K.," Savannah, Ga.—"Please give me the meaning and pronunciation of the word *peripatetic*."

The word is defined as follows: "I. a. 1. Walking about; moving from place to place. 2. Pertaining to the philosophy of Aristotle, who taught in the Lyceum gymnasium of Athens, walking among the youths who resorted thither. II. n. 1. One given to walking about. 2. A disciple of Aristotle." The word is pronounced *per'i-pa-tet'ik*—c's as in *get*, i's as *habit*, a as in *final*.

Use any kind of water with Williams' Shaving Stick

Some men have to use cold water for shaving, especially in Summer. Others prefer it. In some sections the water is hard. These conditions and many others were allowed for in determining the Williams' formula.

Use any kind of water with Williams' Stick. Use it your own way. Rub it in or not—just as you like. You are rule-free if the stick is Williams'.

See how quickly the Williams' lather forms and how it piles up on the face—how immediately it begins the work of softening the beard—how it softens the skin and prepares it for the razor. See how supple, smooth and refreshed the skin feels afterward. See how glove-like it remains all day.

A perfect soap in a perfect holder. Williams' that *holds*—metal to metal. It cannot wobble loose. It cannot fall out.

When you're ready for a Re-Load, a push of the finger releases the wafer of soap from the patented ring. No jamming—no mashing of soap in the Williams' Holder Top. Williams' Re-Loads are instantly ready to insert and always cost you less than the complete package.

Send 10 Cents

THE • SPICE • OF • LIFE

Where the Fighting Lingers.—With the withdrawal of the American troops from the Rhine, it would seem that the war is over for all except those who married to avoid the draft.—*Our Navy (Washington).*

Information Needed.—A woman was seeking advice in the selection of magazines for which she intended to subscribe. Her attention was directed toward the LITERARY DIGEST. She looked at it dubiously and, shaking her head, said: "No, I think not—I never was interested in doctor books."—*Contributed by a Subscriber.*

Curing Johnnie.—"Tom," said his wife, "I don't believe you smoked one of those cigars I gave you on your birthday."

"That's right, my dear," he replied. "I'm going to keep them until our Johnnie wants to learn to smoke."—*Boston Transcript.*

Sold!—An Englishman walked into a Berlin bank, laid down a sovereign and said, "How many marks can I get for this?"

"Hi, there!" cried the manager, addressing his staff, "clear out, the lot of you. This gentleman's bought the bank."—*Boston Transcript.*

Partly Furnished.—For Sale—Sacrifice 7-room California house partly furnished, lot 40x160. Price \$3000 (including 4 lady boarders). \$1000 cash, bal. easy terms. ——— St., take Garvanza car, off York Blvd. —*Classified Ad. in the Los Angeles Times.*

No Escape.—One can not evade the clutches of the advertising manager of the Muskogee (Oklahoma) *Cimeter*. Says he in an announcement on the first page of that journal, "If your business isn't worth advertising, advertise it for sale in the *Cimeter*."—*Nation.*

Unnecessary Violence.—"Yes, I'm continually breaking into song," said the cheerful one.

"H'm! If you'd once get the key you wouldn't have to break in," replied the dismal one.—*Presbyterian Witness.*

When a Father Is Not a Father.—Dispatch from Albion, Michigan—

"'Father' Clancy dead at 91; left twelve children." The "Father" Clancy mentioned was an Episcopalian minister. That brings to mind a "true" story told us by a Protestant pastor of a neighboring town. He was rather new in the place, and his clerical dress resembled that of a priest. As he passed several little Catholic boys on the street, some of them tipped their hats and said in a chorus: "Good evenin', Fader." The minister had hardly passed when one of the youngsters who had not touched his hat turned on the others in disgust with: "Fader! he's no Fader; he's got tree kids."—*The Witness.*

Sounds Bad.—

**MAN ACCUSED OF
STEALING FLEES
FROM POLICEMAN**

—*Headline in San Francisco Chronicle.*

Mistaken Identity.

In Paducah there was a husky negro named "Bull" Shackleford who ruled the black belt by a combination of brawn and intimidation. One day there got off a boat a little yellow ducky, a stranger, who had

A Careful Wife.—"And her mean husband thinks she's extravagant!" "Why?"

"Just because she insists on having Fido's monogram stamped on his dog biscuits!"

One Safe Bet.—WEATHER EXPERT—"When I say it's going to be fine, it's wet; and when I say wet, it's fine! They'll sack me next!"

COLLEAGUE—"Stick to local showers, old man; there must be some local showers somewhere."—*The Passing Show (London).*

A Double Scoop.—WESTERN EXCHANGE—Yesterday we were the first newspaper to publish the death of John J. Parker. To-day we are the first to deny the report. The *Morning Bugle* is always in the lead.—*Boston Transcript.*

All Said and Done.—The speedometer said sixty miles an hour.

The constable said it was ninety.

The natives said it was a crime. He said it was the life.

His friends said it with flowers.—*The Monetary Times.*

Always Under Suspicion.—"I often wonder why Jenks is not more popular, for he's the politest man I know."

"That's just the trouble. He's so confoundedly polite he gives the impression that he wants to borrow money."—*Boston Transcript.*

Getting It Straight.—"I taught school among my own people in the Tennessee mountains for several years after I graduated from college," said a Southern lecturer. "Funny things happened. Hearing a boy say, 'I ain't gwine thar,' I said to him,

'That's no way to talk. Listen: "I am not going there; thou art not going there; he is not going there; we are not going there; you are not going there; they are not going there." Do you get the idea?"

"'Yessur, I gits it all right. They ain't nobody gwine.'"—*The Outlook.*

Whence the "Kee-Wee."—During the late war, officers in the Army Air Service were classified as flying officers or ground officers, the latter being used for administrative work and for all other duties not actually requiring flight. Much jealousy existed at some fields between the flyers and the non-flyers.

It was a naturalist among the flyers who aptly exprest for his fellows a title fitting their mortal enemies. He dubbed the ground officers as "Kee-Wees." The name spread, yet few know the reason for the title. It was while looking up the word "aptitude" in the dictionary that an Air Service Officer stumbled on the right dope: "Apteryx"—A bird native of New Zealand without wings or tail. Can not fly; called by natives, "Kee-wee."—*Airco News.*

"THE SPRING IS COMING."

—From *The Black and Blue Jay*,
of Johns Hopkins University.

some reputation as a prize-fighter. Into a saloon he went and ordered refreshment. As he was pulling off a bill from an enormous roll to pay for it, Bull Shackleford laid a heavy hand on his shoulder. "Say, you little nigger," he bellowed, "you've got too much dough to take care of. You just pass over that roll and I'll give you back what you orter have. Dat's de way I takes care of de niggers round here." The little ducky did not raise his eyes, but he did raise his hand, and he flicked off Bull's hand very much as he would have swept off a fly. Bull squared off and glowered. "Do you know who I is?" he demanded. "I'se the bully of this town. When I gives orders, everybody obeys." Almost without moving his position, the little ducky let go an uppercut and Bull went down. When he recovered consciousness, he looked at the little fellow long and hard. Finally he said: "Dar's just one thing I want to know and dat's all, Mister Man: Who is you, anyway?" Very solemnly the little ducky replied: "I'se de pusson you thought you was when you come in dat door."—*Credited to Irvin Cobb.*

PERFECTED FOR YOU

The House of Squibb came into being for the purpose of furnishing to the medical profession chemical and pharmaceutical products of known purity and dependability.

Naturally, during more than half a century of endeavor, the variety of Squibb Products has increased. It was inevitable that physicians should request that Squibb knowledge and skill be directed also to the manufacture of finer household and toilet products.

If, in your selection of such important daily toilet requisites as talcum powder, cold cream and dental cream, you depend upon Squibb knowledge and professional skill, your confidence will be rewarded with products whose quality yields entire satisfaction.

SQUIBB'S TALCUM POWDER—To the woman who understands the true uses of talcum powder as a boudoir necessity, the Squibb product is indispensable. Its delightful smoothness and delicacy are the results of Squibb's perfected methods of preparation applied to the finest Italian Talc.

Boudoir, Carnation and Violet are the perfumes from which you may choose—also Unscented talcum for those who prefer it.

SQUIBB'S COLD CREAM—Every ingredient in this perfect toilet requisite is tested—the materials combined in proper and scientific manner. Even the perfume is especially prepared in the Squibb Laboratory. There can be no comparison between Squibb's Cold Cream and the inferior commercial product. To use it is to understand what Squibb knowledge has done for the care and preservation of a smooth and healthy skin.

SQUIBB'S MAGNESIA DENTAL CREAM—In this product Squibb has met the demands of dental authorities for a dentifrice known to be absolutely safe and correct in composition. Its base is Squibb's Milk of Magnesia, prescribed by physicians and dentists for the protection of the teeth. It is free from powerful astringents, abrasives, acids and drugs. Rigid chemical control insures the fitness and purity of every ingredient used. Young children can use Squibb's Magnesia Dental Cream with perfect safety.

Sold by reliable druggists everywhere, in original sealed packages.

"The Priceless Ingredient" of every product is the honor and integrity of its maker.

THE LITERARY DIGEST is published weekly by the Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered as second-class matter, March 24, 1890, at the Post-office at New York, N. Y., under the act of March 3, 1879.

Entered as second-class matter at the Post-office Department, Ottawa, Canada.

Are Americans as well read as Europeans?

There have been many theories and much discussion about this matter; here are some striking facts.

ONE often hears travelers assert that the average European is more cultured and more widely read than the average American; that the American seems to prefer lurid fiction, sensational newspapers. Is this really true?

No doubt this impression has been created by the fact that in Europe all of the great classics of literature can be obtained in very low-priced editions, and have always been sold by the hundreds of thousands. This has never been true in this country—until within the last few years.

Yet, like magazines or newspapers, it has always been possible to produce well-bound and well-printed books for a small sum, if some one dared to risk printing in enormous editions. But no one has ever dared to risk this. A few years ago, however, a group of young men decided to rush in where more cautious publishers had always feared to tread.

How a Faith Was Justified

These young men elected to publish many of the greatest masterpieces of the world's literature. The editions of these books ran as high as 1,000,000 volumes at a time, and because of the resulting economies, were offered to the public at a price that

even the poorest could afford. Was this faith in the literary taste of the American public justified? Would Americans really buy the best books in such unheard-of quantities?

The answer is "YES"—and we hope it rings loud enough to give an everlasting lie to the intellectual snobs who are always bewailing the fact that America is a land of "Main Street yokels," that we are essentially an illiterate people and that we have no taste for the best in literature.

The sale of Little Leather Library volumes—for that is the name of the series referred to—has been almost beyond belief. In the last eighteen months alone over TEN MILLION of these books have been purchased. And what were these "best sellers"? They were the best works of—Shakespeare, Browning, Burns, Coleridge, Macaulay, Tennyson, Longfellow, de Maupassant, Wilde, Poe, Emerson, Thoreau, Lincoln, Stevenson, and other similarly great masters!

Today you will see these books on the library tables of the wealthiest people in the land, and you will see them, too, in the homes of the humblest and poorest. And wherever you see them, you will know that in that home live people of unquestioned culture, whether they be rich or poor. For, clearly, they love good books, and what more can be said of a man?

What Some People Guessed

The publishers are still offering to sell thirty of these great works for the sum of \$2.98. The illustration above shows the set in reduced size. They are books that no one

cares to confess he has not read and re-read. They are complete as written, every one of them. This is not that abomination, a collection of "extracts." Their beauty and character you may judge from this fact: A large number of book-lovers were shown a sample, without being told what the price was, and estimated that this set of thirty books was worth from \$50 to \$100. These estimates are on file for the inspection of any one interested.

The paper used in these volumes is a high-grade white-wove antique—equal to that used in books usually selling at \$1.50 to \$2.00 apiece. The type is clear and easy to read. The binding is a beautiful limp material, tinted an antique copper and green, and so beautifully embossed as to give it the appearance of hand-tooled leather. The entire set contains almost 3,000 pages. And the books are so convenient in size that one or two can be carried easily in a pocket or purse. The whole set makes a wonderful traveling library, since it weighs but three pounds. At the same time, it is handsome enough to grace any library table.

Do Not Send Money

Will you not send for these books, if you do not already own them? No description, no illustration, can do them justice. The publishers would like to send a sample to every LITERARY DIGEST reader, but frankly the profit is too small. But we offer instead to send you the entire set on trial.

Simply mail the coupon or a letter. When the set arrives, pay the postman \$2.98, plus postage, and then examine the books. Your money will be returned any time within thirty days for any reason, or for NO reason, if you request it. Tear out the coupon now, so that you will surely be reminded to send it in.

LITTLE LEATHER LIBRARY CORP'N.,

Dept. 266, 354 Fourth Avenue, New York.

Please send me the set of 30 volumes of the De Luxe edition of the Little Leather Library. It is understood that the price of these 30 volumes is ONLY \$2.98, plus postage, which I will pay the postman when the set arrives. But if I am not satisfied, after examining them, I will mail the books back at your expense within 30 days, and you are to refund my money at once. It is understood there is no further payment or obligation of any kind.

The Sources of Extra Mileage

IT is natural that the car owner should assume, in buying Firestone Cords, that he will get extra mileage at no additional cost. He has been pledged Most Miles per Dollar by an established organization of the highest responsibility.

Were he a tire expert watching Firestone production he would quickly see how Firestone is able to give so much.

He would recognize in such processes, as air-bag cure, rubber-blending and tempering, double gum-dipping and calendering of

cords, as Firestone has evolved them, the practical sources of extra mileage.

And in the vast, smoothly-operating Firestone plants he would discover the system, the elimination of waste and the efficiency that effect the vital reductions in Firestone production costs.

It requires not only determination but unusual facilities and ability to build tires that set a new standard for quality and mileage at the lowest prices in automotive history.

LITERARY DIGEST readers seeking schools or colleges will find in these pages a variety of educational institutions, including summer schools and supervised summer camps. In the first issue of each month, May to September, there will appear display advertisements describing these institutions. In the issues other than the first issue of each month, from May 13th to September 9th, we publish a Classified Directory giving the desired names and addresses of those advertising with us. You are invited to write to the schools or camps in which you are interested.

Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary that inquirers give age and sex of the child, approximate cost of tuition, locality and size of school (or camp), and any other information that may aid us in giving prompt service.

Gordon College of Theology and Missions, Boston, Mass.

Technical

Mining Engineering Training

Is necessarily the broadest training for the prospective engineer, fitting him to take advantage of the greatest variety of opportunities. This College (established 1886), a state institution not conducted for profit, offers a comprehensive four-year course which can be completed in three calendar years. It is located among the copper mines, and close to the iron mines of the famous Lake Superior region. Through the close relations maintained with operators, and the methods pursued, the neighboring mines, mills, smelters, electrolytic and power plants are constantly used in the regular work of the student. Managers of large operations regularly lecture to classes. Unusual opportunities for geological field work. Vigorous athletics. "M.C. M. Men Make Good." For descriptive book, address at 266 College Ave., Houghton, Mich.

Michigan College of Mines

Colorado School of Mines

(Est. 1872)

Golden

Study Mining Engineering

at the oldest Mining College in the United States, located in heart of nation's greatest mining districts, where practically every ore is mined and smelted; 10 buildings, mine camp equipped for practical instruction. Tuition nominal. Students in demand. Four-year courses in Metal Mining, Metallurgy, Geological Engineering, Chemical, Mechanical, Civil, Electrical and Petroleum Engineering, leading to degrees. Scholarships for each state and for foreign countries available to students entering the freshman class. Ask for special Catalog L free.

Autumn Term Begins Sept. 4, 1922

Registrar, School of Mines, Golden, Colorado

Electrical men with training are in demand.

For more than a quarter of a century this school has been training men of ambition and limited time, for the electrical industries. Condensed course in Electrical

Engineering

enables graduates to secure good positions and promotions. Theoretical and Practical Electricity. Mathematics, Steam and Gas Engines, Mechanical Drawing. Students construct dynamos, install wiring and test electrical machinery.

Course with diploma complete

Thoroughly equipped fireproof dormitories, dining hall, laboratories, shops. Over 3000 men trained.

Write for catalog 30th year begins Sept. 27th, 1922.

(Title registered in U S Patent Office for use in this publication and on moving picture film.)

THE BULL MOOSE STIRRING AGAIN

CHEERING SIGNS of party health are seen by hopeful Republican organs in the political revolutions in Indiana and Pennsylvania, where the Republican voters are so powerful, in fact, that they beat their own party machine. What, then, will they do to the Democrats in November? The logic may seem air-tight, yet the Democratic press take the same record, turn it over, play the tune on the other side—and find it a Democratic Victory March. Riffing over the Democratic exchanges and glancing here and there at the big headlines, we see: "REPUBLICAN MACHINE SMASHED IN PENNSYLVANIA"; "G. O. P. PANIC GROWS"; "REPUBLICANS FACING FIGHT TO HOLD HOUSE"; "THE OLD GUARD REELS"; "GLOOM THICK AT CAPITAL." The headlines, indeed, recall 1910. Democratic editorials predicting victory in the next Congressional and Presidential elections; Republican editorials denouncing a Republican tariff measure; attacks on Congressional leadership; reports of anti-machine candidates winning fights against the Republican organization—these things remind Democratic editors of the

memorable days when Taft was President, Theodore Roosevelt was returning from Africa, and Gifford Pinchot and Albert J. Beveridge were leading the attack upon the Administration.

But if Democratic journals find so striking the resemblance between the political happenings of the spring of 1910 and those of the present season in the way of Democratic local successes, primary defeats for Republican State machines and "regular" leaders, and the unpopularity of a Republican Congress, their conclusions are not shared by most of their Republican contemporaries. The latter observe that 1910, like 1912, is ancient history, that the party is strongly reunited, that everybody is now "regular," that the Administration is efficient and popular, that lively primary fights and the capture of nominations by able and progressive men are mighty healthy signs. On two points, however, there does seem to be agreement—that the voters are not altogether pleased with all that the present Congress is doing or leaving undone, and that the women voters are making themselves felt most unmistakably. Moreover, there is a very general editorial recognition of something stirring among

the Republican voters which recalls the attitude of mind characteristic of the "insurgent," the "Progressive," and the "Bull Moose."

In one fortnight the powerful Republican State machines of Indiana and Pennsylvania are conclusively defeated by two of the foremost Roosevelt lieutenants of 1912; the Ku Klux Klan barely missed capturing the Oregon Republican primaries; independent candidates are said to be threatening such veterans as Lodge and McCumber; "third party" movements are reported from Western Republican States. Something, observes the *Springfield Republican* (Ind.), "is whipping up an unexpected wind over the broad reaches of Republicanism." "Pinchot, with a reflection of the Roosevelt halo on his political brow, inevitably suggests" to the *New York World's* (Dem.) Washington correspondent "a re-erudescence of the Progressive movement in his party." The *New York Herald* (Ind.) comes to the conclusion that "the spirit of Liberal-Insurgency is still a force to be reckoned with in American politics." "The

mere announcement that a former Progressive is going to enter a primary must send shivers down the spine of those in control of the party machinery," thinks the *New York Evening Post* (Ind.). From now on, says the Worcester (Mass.) *Labor News*, "the old gang" will be made to "hustle for their lives."

"Yesterday was a bad day for us Tories," remarked Senator Moses (Rep.) the day after the Pinchot victory in Pennsylvania, and, according to the *Philadelphia Record's* (Dem.) Washington correspondent, "this well summarized the feelings of the Republican conservatives." On the other hand, as Charles Michelson reports in a *New York World* dispatch:

"The out-and-out Progressives among the Republicans are chortling in their joy over the rebirth of Progressivism. From now on to Election Day there will be Progressive candidates springing up all over the country, for the speed-wagon is clearly indicated as the vehicle to get aboard of for a real political joy ride, and if they do pretty well this time, there will be something doing in 1924."

Progressive Republican Senators like Borah, Lenroot, Capper,

Norris, McNary and Hiram Johnson acclaim the Pinchot victory as a remarkable triumph of progressivism. And in a Washington dispatch to the *New York Times*, an unnamed Republican Senator is reported as saying:

"There must be a rehabilitation of the Republican Party in the nation, or there will be a third-party movement in 1924.

This is the lesson of the primaries held thus far, and it is not too late for the President to do something to stop the wave of protest. The people are not party followers any longer. They are now voting for their own interests, demanding economy in Government and representatives who stand for business methods in public affairs."

The emphatic support given Progressive Republican leaders in such tests as we have had can be interpreted in only one way, says the *Columbus Ohio State Journal* (Rep.), namely, "that Republican dissatisfaction with the way things have been going under Old Guard control is wide-spread and deep-seated." And the *New York Globe* (Ind.), with an eye to the parallelism between the conditions of to-day and those of 1910, declares:

"It is no secret that the Harding Administration has repeated many of the sins done under the name of President Taft. The appointments made have been as reactionary. Such men as Senator Spencer of Missouri have foisted impossible candidates upon the President. The continued presence of Governor E. Mont Reily in Porto Rico is an open scandal. The nomination of Nat Goldstein of Lowden money fame was even more than Goldstein himself could endure. Then there was the overt disregard of civil service in the Bureau of Engraving, and the attempt to 'Hardingize' public employment. Worst of all is the tariff measure, a projected plan vastly less intelligent than President Taft's revision upward.

Against such patent evils, and, more than that, against the spirit suspected of favoring large business interests at the expense of the nation, the mind of the nation is set."

In most States, the *Cleveland Plain Dealer* (Dem.) would have us remember, "there are remnants of the fighting progressive faction of ten years ago, inactive but not extinct." The

Democratic *Boston Post*, *Brooklyn Citizen* and *Richmond Times-Dispatch* agree that Republican voters are in revolt against conservative party leadership. The Old Guard, we read in the *New York World* (Dem.), "is now facing two years of factional war for the control of the Republican Party in 1924, with the odds steadily increasing against it." The *Chicago Journal* (Dem.) goes so far as to declare that "the Republican Party is badly split; how far the break will go no prophet can say, but the forces which came together to win the overwhelming victory of 1920 have separated."

In this situation, of course, many Democratic papers see a Democratic opportunity. The Democratic corpse that was "drowned eighteen months ago" is now "walking around almost as saucy as ever," observes the *Baltimore Sun* (Ind. Dem.), and signs of renewed Democratic strength are likewise envisaged by the *Birmingham Age-Herald* (Dem.), *Charleston News and Courier* (Dem.), *Buffalo Times* (Dem.), *New York American* (Ind.) and *Syracuse Herald* (Ind.). In the cities of the country, says Mark Sullivan, the *New York Evening Post's* political expert, there is clearly "a trend away from the Republicans to the Democrats," which he thinks may be partly due to the dissatisfaction with the Volstead Act and its enforcement. Cordell Hull, Chairman of the Democratic National Committee, commenting on the recent primary elections, comes to the conclusion that "the Democratic party will soon step into control and give the country that full measure of intelligent and practical relief that it did after 1912."

But lest Democrats be too complacent, the *Baltimore American* (Rep.) warns them that "there is food for thought for both parties" in the Pinchot victory. Yes, admits the *Brooklyn Eagle* (Ind. Dem.), "the spirit that rises to overthrow the Republican machine in Pennsylvania is precisely the same that may rise to overthrow the Democratic machine in Georgia and Texas. It

is a growing spirit all over America unless we are much mistaken." The *Raleigh News and Observer* (Dem.) likewise feels that in both parties "political bosses and political machines in cahoot with selfish interests are headed for the scrap heap."

Similar reflections lead the *New York Journal of Commerce* to call for a conservative third party, and the *Socialist New York Call* to tell the workers to form themselves into a radical party

or join the Socialists. In the West and Northwest, reports the *Independent Indianapolis News*—

"There are a good many third-party movements, distinct from one another, as a result of dissatisfaction arising from different causes, that will have Congressional tickets in the field. Notably is this the case in Idaho, Nebraska, North Dakota and Wisconsin. The amount of strength such movements will

develop can not at this time be measured, but it is by no means improbable that some of their candidates will be elected."

Some Republican papers, it has been noted, answer their Democratic friends by calling attention to weaknesses in both party organizations; others retort that these primary results in States like Indiana and Pennsylvania do not show weakness in the party organization, but, if anything, are signs of strength. President Harding, they point out, considers both Mr. Pinchot and Mr. Beveridge most loyal supporters. Mr. Pinchot tells the reporters that he is quite sure that his vote in Pennsylvania is "not a repudiation of President Harding." The nomination of men like Pinchot and Beveridge, says the Republican *New York Tribune*, *Albany Knickerbocker Press*, *Troy Record* and *Cincinnati Times-Star*, is a grand thing, showing that the party is progressive, alert and calling on its best men for places of leadership. The *Washington Post*, a generally accepted mouthpiece of the Administration, looks upon the suggestion that these recent primaries show a survival of the differences of 1912 as "absurd" and "ridiculous." Both Beveridge and Pinchot, it insists, were nominated by and as Republicans, and were supported by both progressives and "regular" Republicans. Both "declared themselves whole-hearted supporters and champions of the National Administration," and "the reasonable deduction" to make from their success "is that Republicans everywhere are alert, progressive, united, and confident of another national victory." So important a Democratic daily as the *Louisville Courier-Journal* admits that if, as in Indiana and Pennsylvania, the more liberal and progressive Republican elements "are to come into control, it will mean the return to health of a great party"; and it disagrees with some of its Democratic contemporaries by predicting that there will be no split, since Harding, "being a follower instead of a leader," is likely, if he sees the tide sweeping his party from its

Old Guard moorings, to "jump in and float or attempt to float with the tide."

And now that Congress is mentioned, it must be set down that there appears a very wide inclination, mostly, of course, among critics of the party in power, to find in the results of recent primaries, Congressional elections, and local elections evidence of wide-spread popular dissatisfaction with the record of the present Republican Congress. Nearly everybody in Washington, writes F. W. Wile to the *Philadelphia Public Ledger* (Ind.), accepts these things "as an undeniable expression of popular discontent with the Sixty-seventh Congress." Louis Seibold particularizes in a dispatch to the *New York Herald* (Ind.). He believes the voters resent the "economic bludgeoning" tariff and "the bonus raid on the public treasury," two proposals which "are of Congressional origin." He adds that the tariff is beginning to develop something like an insurgent movement among the Republican members of Congress. Independent papers in New England like the *Providence Journal*, *Boston Globe*, and *New Haven Journal-Courier* bear witness to the strong feeling of resentment on the part of the voters over "the conduct of the leaders in the two branches of the Congress"; in the words of the *New Haven daily*, "at the McCumbers in the Senate, and the Mondells and Fordneys in the House of Representatives." In *New York The Evening Post* (Ind.) and *The Commercial* agree with *The Wall Street Journal* that "the incompetence of Congress" is beginning to call down the wrath of the voters. Lest any one should think that this state of mind is confined to the East, we may note the *San Francisco Argonaut's* (Ind. Rep.) brief summa-

tion of the case: "Congress has acted badly—badly in respect of its promises, badly in regard to its immediate duties, badly with respect to the President." "It would be idle to deny or to seek to disguise the fact," adds the *San Francisco weekly*, that in the results of recent Republican primaries "there is a portent of Republican disaster in the elections that are ahead of us."

It may be a long way from the Garden of Eden to the banks

of the Wabash and the Pennsylvania mining-towns. But recent primary post-mortems repeat the familiar words uttered by our first parent when he tried to account for his fall from sinlessness—"The woman thou gavest me—it's all her fault." Yes, the women did it, say both Senator Watson, speaking for the defeated organization in Indiana, and the manager of the defeated candidate in Pennsylvania. Yes, we did it, say Mrs. Pinchot and the women whose organization helped to swamp the machine in the Keystone State. Essentially, declares the Philadelphia *North American* (Prog. Rep.), one of the many Pennsylvania newspaper supporters of the Forester, "the nomination of Pinchot was a victory won by the women." That is:

"They made the campaign what it was, and it was their concentrated vote which saved the State from passing under the sway

of a new combination of bosses. They have demonstrated that they will not be herded like sheep. They have revealed that they possess a higher sense of political morality than the men, and will not suffer it to be drugged by appeals to condone wrongdoing and tolerate misrule for the sake of 'loyalty to the organization.'"

In Indiana, the independent South Bend *News-Times*, under an editorial heading, "Page Mr. Adam," declares that "the woman vote probably went very largely to Mr. Beveridge," because of Senator New's vote in favor of seating Senator Newberry of Michigan, and because these "simple-minded" women voters are "simple enough to appreciate high ideals, lofty purpose and plain every-day honesty." Moreover, observes the Indiana daily, we may as well "write it down that the women will always 'do it' when there is a clear-cut issue which involves fundamental morals: on minor things they may divide, on plain questions of solid virtues never."

While women have identified themselves with the parties, they have, writes David Lawrence, in a Washington dispatch to the New York *Evening World*, "shown little sign of becoming thick and thin party supporters." Continues this well-known political correspondent:

"Women are believers in the direct primary system and will fight tooth and nail a return generally to the convention system of electing candidates, and they are identifying themselves with the Progressive wing of each of the parties and will reserve for themselves the right to swing from one branch of the party to the other, indeed from one party to another, depending upon which is the more progressive."

THE PRESIDENT'S MOVE AGAINST THE TWELVE-HOUR DAY

WHEN PRESIDENT HARDING invited forty-one leaders of the iron and steel industry to dine with him at the White House and discuss the feasibility of abolishing the twelve-hour workday in the steel mills, public opinion as reflected in the press was virtually unanimous in its applause. The immediate result was an admission by the steel magnates that the abolition of the twelve-hour day was desirable "if, and when, practicable," and their promise to appoint a committee to investigate and report on the subject. Some commentators, it is true, note that the President's move may be interpreted in terms of politics as well as of humanitarianism. Thus a Washington correspondent of the Democratic New York *World* reports that in the capital, where facts are likely to be looked at through a political atmosphere, "cynical observers theorize that the dinner was calculated to serve a double purpose—charming the purse-bearers and pleasing the labor people, who have been acting harshly toward the G. O. P. in recent political battles." From the same correspondent we learn further that—

"In some quarters, and particularly among the trades unionists, there was a disposition to regard the steel dinner as a sequel to the Indiana and Pennsylvania primaries. Senator New's defeat is attributed largely to the vote of the Hammond and Gary steel workers, and the millmen of Pennsylvania are claiming the credit of Pinchot's nomination. . . .

"The Republicans have been greatly worried at their prospects in the industrial States, particularly New England, where the strikes are regarded as politically menacing."

The twelve-hour day is "the most inhuman feature of American industry," declares the New York *Globe* (Ind.), which sees hope for its abolition "in the fact that an implied promise has been publicly made to the people and to the Administration." In taking this problem in hand at the outset of a trade revival, remarks the New York *Times* (Dem.), President Harding has shown himself "as forethoughtful as he is liberal and humane." Another Democratic paper, the New York *World*, comments sarcastically on the development, under the present Administration, of "government by dining," which it characterizes as "an admirable social practise and a pleasant variation of the system of consulting the best minds"; and it suggests that "next it may be the turn of oil or chemicals or cotton goods to sit at the President's table." To the Socialist Milwaukee *Leader* the steel dinner is "merely a press-agenting effort to bolster up President Harding's political fortunes." "It may be that politics enters into the President's efforts for industrial conciliation and cooperation," concedes the independent New York *Evening Post*, but "if this is politics, it is nevertheless a case of politics coinciding with wisdom and national interest." "It is obviously the President's desire to inaugurate an era of good feeling between capital and labor, and it is obvious that he wants capital to take the lead," adds *The Post*.

"There can be nothing but praise for either the motive or the method" of the President in this case, avers the Washington *Star* (Ind.), which predicts that "public attention now will be centered on this industrial wrong as it never has been centered before, and the steel mill-owners will find themselves spurred on by a growing volume of public sentiment." "The worthiness of the President's intent can not be called into question," declares the Newark *News* (Ind.), which goes on to say:

"It is pretty small business to go back of the fact and impute political motives to the Executive as wishing to salve labor and to get big business more willing to chip in for campaign funds. The President and his Cabinet are greatly concerned about the industrial condition of the country. It is their business to be. If the twelve-hour day in the steel business is to be done away with, then the time to do it is before, not after, business gets into full swing again, according to the President's views."

President Harding "has done a real service" in this matter, remarks the *Kansas City Star* (Rep.), which adds:

"He has no legal authority to act. But, like Roosevelt, in dealing with the coal strike, he is acting as spokesman for enlightened public opinion. When a President acts in this capacity he is likely to have his way."

The twelve-hour day "has been one of the chief grievances of the steel workers and one of the conditions of employment that has been most condemned by impartial investigators," the *Springfield Republican* reminds us. It recalls also that ten years ago the stockholders of the United States Steel Corporation accepted a report of a special committee urging the reduction of long hours of labor for its employees. To quote *The Republican* further:

"As to whether the 12-hour day has any justification on the ground of economic necessity, it is perhaps enough to recall that it was abandoned some years ago by the steel industry in Great Britain, following vigorous agitation by the labor unions, accompanied by an agreement to accept a reduction in pay commensurate with the reduction in hours."

It has been found practicable also, says the *New York Evening Post*, in a number of American steel-mills—"the Colorado Fuel and Iron Company, the Inland Steel Company, the International Harvester Company, the Ford Plant, and others."

The man who works twelve hours a day, other papers point out, can have no home life, nor can he accept the responsibilities of citizenship. He has no time to devote to his religious duties, to his children, or to social recreation. He has time, in fact, to do little but work, eat and sleep. While only a fraction of all the men working in steel-mills work twelve hours a day, the number thus employed by the United States Steel Corporation alone, the *New York Herald* states, is about 70,000. To quote *The Herald* further:

"To many of them twelve hours of work has become a fixt part of life. Many of them do not work continually through the long stretch. Some have periods of rest between 'heats' in the open-hearth furnaces. Others working under great pressure or a heat of 120 degrees, are 'spelled.'"

"But there are some men who work steadily for twelve hours. It is such conditions as these that President Harding must have had in mind when he sent for the steel captains and when he said that 'if we have in America conditions under which men may produce and enjoy life with something of luxury as well as the necessities, we shall have a contented citizenship.'"

Our steel manufacturers, says the *New York Times*, "have based their labor costs not upon a modern and American standard of living, but on a standard that is medieval, Asiatic." The question of changing this, declares the *New York Evening Journal*, "is solely up to Mr. Gary and his confreres." Mr. Hearst's paper goes on to say:

"They have prevented the formation of labor organization in the steel industry, so the men can not fight for themselves."

"The Federal Government can not help them, for successive Supreme Court decisions—the latest the one annulling the Federal Child-Labor Law—have declared that the States alone can regulate working conditions in industry."

"The States can not help in reducing the twelve-hour shift in the steel business, for the Supreme Court has declared State laws limiting the hours of men's work to be unconstitutional, because such laws interfere with a man's free right of contract."

That difficulties will be encountered in shifting from the twelve to the eight-hour day, many papers admit. One obstacle, some of the President's dinner guests explained to him, is that most of the men now working twelve hours are foreigners who want to work long hours in order to receive high pay, make a "stake," and return to their mother countries. It has been figured, says the *Kansas City Star*, that if the reduction of hours necessitated an increase of only 35 per cent. in the working force, and if the men were paid as much for eight hours as they now are for twelve, the added expense to the United States Steel Corporation would be about \$61,000,000 a year.

TRUCE OF THE IRISH FACTIONS

THE CRITICAL SITUATION IN ULSTER, Michael Collins now admits, was the real reason behind the Irish Free State-Republican agreement providing for cooperation between the Collins and De Valera factions in the coming election. Conditions in the northern province, despite the presence in Belfast streets of large bodies of British troops

and 2,000 police with motor trucks and armored cars, were going from bad to worse; sixty murders in three days, including a member of the Ulster Parliament, indicated to both Collins and De Valera that something must be done to prevent a war of extermination. Moreover, the credit of Ireland was being weakened abroad. It was agreed, therefore, that the Government of South Ireland should be placed in the hands of a coalition cabinet composed of five adherents of the Irish Free State and four followers of De Valera. The fact that De Valera seconded the motion for an election on June 16, which he had bitterly opposed, and stressed the need for unity in Ireland, is pointed out by the Dublin correspondent of the *New York World* as "the mark of real unity."

But has Collins secured peace with the De Valera Republican faction at the price of fresh trouble with England and Ulster? In signing an agreement that precludes a test of strength between the Collins pro-treaty party and the De Valera anti-treaty faction, have these two leaders incurred the displeasure of Sir James Craig, Ulster Premier, and Winston Churchill? Altho undoubtedly glad of an armistice, Sir James declares that the compact has changed the whole situation, and that his Government will not enter into negotiations with any boundary commission representing Southern Ireland; that what territory the Ulster Government has it will hold. Mr. Churchill, Colonial Secretary, moreover, is said to hold that the Collins-De Valera pact is an infraction of the spirit if not the letter of the British Treaty. The issue of whether the treaty is acceptable to the

people of Ireland has been sidetracked, maintains Mr. Churchill, who believes, according to the London correspondent of the *New York Tribune*, that there can be no real peace in Ireland until the people put the De Valera Republicans in their place and put an end to terrorism. Another point which is said by this correspondent to be worrying the British Government is the threat of the Republican faction that if they are beaten in the South of Ireland they will continue to stir up trouble in Ulster.

Whether the Collins-De Valera agreement represents a triumph for either party still remains a question. It is freely admitted in Ireland that the Provisional Free State Government, realizing that an armed minority could prevent any government from functioning, has made large concessions. In fact, the *Irish World* (New York), claims a victory for the Irish Republic. De Valera, however, declares that he and Collins "regard the agreement not as a triumph of one section of opinion over the

agreed election of a coalition Government for Ireland." Great Britain's views, as reflected in the *London Chronicle*, are thus set forth in a cable to the *New York Times*:

"Technically, and perhaps constitutionally, no objection can be raised to the agreement; but the spirit of the treaty agreement, as understood by the British Government, was that the first Southern Irish elections should show whether or not the South is in favor of the Irish treaty. For after those elections the Irish Provisional Government is to bring forward a Free State Constitution and the Imperial Parliament, after determining that it is within the terms of the treaty, is to ratify and enact it, thereby presenting a new Constitution for the Free State. The South was then to hold their second elections under the Constitution, this time to set up their Constituent Assembly.

"By this new Irish coalition agreement, the British Government may be put in the extraordinary position that since the first elections will not declare the true opinion of the South, whether pro-treaty or pro-republic, a Constitution may be presented to Southern Ireland by the Imperial Parliament and may be rejected in Ireland by the second elections. Indeed, the Irish Coalition Ministry before the second election might break upon this issue."

Nevertheless, we are told by the Dublin correspondent of *The Times*:

"The agreement between Collins and De Valera has been received with universal approval. It has come as a great relief to Ireland, already tired of conferences with continuous wranglings, bickerings and personalities. It will be bad news, it is felt, for the brigands, murderers and looters, whose evil campaign must end."

"Time is on the side of the Free State Government," notes the *New York Evening Post*; "it softens old animosities, and may bring a rapprochement with Ulster. Moreover, it exposes the shallow fanaticism of De Valera." "Now we shall see whether Mr. De Valera has any moral influence over the more radical Republican element," observes the *New York Herald*, "for he must, in honor, urge the irreconcilables to stop making war on the Free State." "If this peace is made real; if Catholics and Protestants in Ulster can be persuaded to stop murdering each other, influential forces in Ulster may even begin to work for a single Government for all Ireland," believes the *New York Evening Mail*.

Other editors, however, are not so optimistic over the agreement. "The pact will probably prevent further bloodshed outside of Ulster," concedes the *Gaelic American* (New York), "but it will leave the political situation as chaotic as it was before—unless the Labor Party elects a large number of candidates at the June election." "Incidentally," points out this Irish paper, "the agreement reveals the hollowness of the claim of the De Valera crowd that they were fighting for a Republic. There seems to be no doubt that their object has been all along to get as much control of the Government of Ireland as possible, when they saw they could not obtain complete control." Yet, as the *New York World* reminds us, "common sense dictated some sort of compromise between the two factions at Dublin, altho the agreement settles nothing for long and is a makeshift arrangement."

"For the greater part of Ireland's troubles the pact will do no more than put off the evil day of reckoning between Free State men, moderate Republicans, and the bitter die-hards of Republicanism" agrees the *Philadelphia Public Ledger*. As this well-informed paper sees the situation:

"Neutral opinion holds that the Free State has to-day an overwhelming majority of Irish votes if it were possible to hold a fair, honest, peaceful election unmenaced by gunmen. Enemies of the Free State have prevented such an election; and somehow and for some reason never made wholly clear the Free State either can not or dare not put the fortunes of settlement to the test and go through with an election.

"If this is the Irish idea of settling the Irish question, it still will be with us in the year 2000 A. D."

other, but as a peace triumph of the Irish nation." The articles subscribed to by the two leaders and their associates are:

"First—That a national coalition panel, for this the Third Dail Eireann, representing both parties in the Dail and in the Sinn Féin organization, be sent forward on the ground that the national position requires entrusting the Government of the country into the joint hands of those who have been the strength of the national situation during the last few years without prejudice to their respective positions.

"Second—That this coalition panel be sent forward as from the Sinn Féin organization, the number from each party being their present strength in the Dail.

"Third—That the candidates be nominated through each of the existing party executives.

"Fourth—That every and any interests are free to go up and contest the election equally with the National-Sinn Féin panel.

"Fifth—That constituencies where elections are not held shall continue to be represented by their present deputies.

"Sixth—After the election the executive shall consist of a President, elected as formerly; Minister of Defense, representing the army, and nine other Ministers, five from the majority party and four from the minority party, each party to choose its nominees. The allocation will be in the hands of the President (Mr. Arthur Griffith).

"Seventh—That in the event of the coalition Government finding it necessary to dissolve, a general election will be held as soon as possible on adult suffrage."

Under the British Treaty the Provisional Government must end before December 6, and meanwhile the British Parliament must ratify the treaty and pass the Constitution Bill. When Collins said, however, that the two parties "must put an end to disorder," and that "if the agreement imperils the treaty with England, then we shall face that situation," his words were interpreted by the London correspondent of the *New York Tribune* to mean that "the treaty may be thrown into the discard if the British Government attempts to interfere with the plan for an

WHY WE LEND LIBERIA \$5,000,000

DISAPPROVAL of the Congressional vote to lend \$5,000,000 to the little negro republic of Liberia, on the west coast of Africa, seems to focus on the terms of the loan rather than on the loan itself. These terms, we are told, establish a virtual protectorate over this African republic, and, as the *New York Nation* sees it, "impose a most immoral servitude upon the Liberian people." Moreover, declares this liberal weekly, "the business of committing the United States to defend jungle frontiers against the British and French is going too far." The *New York Tribune* also thinks it unfortunate that the conditions under which we propose to advance the money "are such as to make the United States the receiver for Liberia." "Do we wish to extend into Africa?" asks *The Tribune*. "No," declares Representative Harry St. George Tucker, of Virginia, who predicts that the American people will condemn this "remarkable" proposition on the ground that it "must lead us into untold entanglements," thereby "increasing the chances of war."

Other observers, however, share the *Providence Journal's* conviction that "the signature of Secretary Hughes to the agreement made with the Government at Monrovia ought to be sufficient to convince questioners that the terms are businesslike as well as generous." "The simple truth about this loan situation," writes President Harding in a letter to the Ways and Means Committee, "is that our Government is unable to deal with the Republic of Liberia in that good faith which is becoming a great Republic like ours." He reminds Congress that the loan of \$5,000,000 was pledged to Liberia by the Wilson Administration in 1918, when the Negro Republic joined the Allies by declaring war against Germany.

This money was originally intended as a "war loan," but, as the *Providence Journal* remarks—

"It ought to be agreed that it is better to have the money devoted to permanent public improvements than to have had it burnt up in war. To penalize Liberia by cutting off the loan because it was not consumed in hostilities would seem hardly fair. The little country suffered economically as a result of the war, and in part as a result of her stand as a belligerent on our side."

The same paper reminds us that historically Liberia is a protégé of the United States, having had its origin, long before the Civil War, in a movement to set up a home for freed slaves.

The terms of the proposed loan, says *The Nation*, were agreed upon at Washington last October by Secretary Hughes and by plenary commissioners of the Liberian Republic. These terms, avers *The Nation*, "make Liberia in fact a servile American colony, ruled by a financial commissioner to be named by the President of the United States." We read further:

"This financial commissioner will collect and disburse all Liberian revenues; he will determine the size of the Liberian police and military force, which will be commanded by American Army officers; he will have power to veto any item in the Liberian budget, to order any financial legislation passed which he may desire, to dismiss any employee of the Liberian customs, tax, or treasury devices at will; he will limit the annual expenditures of Liberia to a total of \$560,000, a fifth of which, \$109,700, must go to pay the salaries of 22 American officials, and more for their expenses. He will himself receive a salary 25 per cent. larger than that received by the Secretary of State of the United States. In short he will be the well-paid dictator of Liberia, subject to no Liberian control and only in a very distant manner to control by the United States."

The Nation concedes that "here, if there ever was one, is a case for the United States to give genuinely disinterested help," and that such help "would, under the circumstances, necessarily involve some American supervision of customs." But it argues that we should not "impose upon a tiny African republic a loan which has no fixt date of termination, and which puts the absolute control of the republic for the period of the loan in the hands of an American official."

NIPPING A COAL PANIC IN THE BUD

A SOFT-COALBUYERS' PANIC, with the "skyrocketing" prices which would affect industry and retard or reverse business recovery, was nipt in the bud, according to Washington dispatches, when Secretary of Commerce Hoover called into conference the coal operators from whose mines is coming more than fifty per cent. of the coal that is being mined by non-union workers during the strike. That the bituminous coal situation was "loaded with dynamite" was admitted by Secretary Hoover at the conference, and when he told the operators that "the soft-coal industry must govern itself or the Government would take a hand," as one paper puts it, the Secretary's voluntary price control plan was accepted. The temporary scale of prices agreed upon to prevent profiteering in the weeks to come is roughly based upon the war prices fixt by the Garfield Fuel

Administration in 1917. This would establish mine prices of bituminous coal ranging from \$2 to \$3 per ton, whereas recent prices have reached \$4.50 per ton, we are told. In view of the fact that existing stocks of soft coal total 40,000,000 tons, while non-union production is said to be increasing, there is no justification for an increase in price, maintains Secretary Hoover. At the conference he pointed out that—

"At the present time the price of coal has risen unduly in certain districts, while in other districts there is an insufficiency of orders to employ the mines full time. There are very large stocks of coal in the country in the possession of consumers, and the problem is one of coordination and cooperation. The reports of certain wholesalers that there is a shortage of coal are untrue and designed to further their personal ends."

"In 1920 nothing was done until coal had mounted from \$9 to \$15 a ton. Then the Government succeeded in reducing the price from \$3 to \$5. At present coal sells for from \$2.25 to \$4 at the mouth of the mine in most sections. Because of the strike the selling price at a few mines has increased to about \$4.50. If profiteering is to be prevented as the strike proceeds, action must be taken at once. There is no law whatever to cover the situation, and what we can do must be by voluntary action."

Secretary Hoover's plan, to which the operators assented, provides for clearing-house committees in each coal-producing district, made up of operators, consumers' representatives and a Government agent. These district committees will supervise the

distribution of orders for coal, see that coal is sold direct to the consumer, thereby eliminating the profits of speculators and middlemen, and maintain reasonable prices. A general committee in Washington will obtain coordination between the district committees. In order to avoid any fear in the minds of the

municipal governments to inaugurate legislation seeking to permanently control the industry.

"It should be the duty of every open-shop mine operator to hold his prices well in hand and not stimulate a market scare. On present labor costs in non-union fields, \$3 a ton for mine run, where the vein worked is about five feet, should be ample compensation to operators, while a price above this level can be classified as rank profiteering."

"Any display of greed by the operators now would lessen the public favor they enjoy," agrees the Columbus (Ohio) *State Journal*, but the Socialist Milwaukee *Leader* remarks that profiteering already has been shown. As the New York *World* points out, however, "there is no law against profiteering."

In favorably reporting the bill of Congressman Bland, of Indiana, providing for a permanent commission to ascertain facts regarding the coal industry, the House Labor Committee tells us that—

"It is a startling statement, but true, nevertheless, that to-day there is no agency in the Federal Government which has ascertained or can ascertain the correct production cost of a ton of coal in a well-operated, efficient mine."

We are further informed in the *United Mine Workers Journal*, of Indianapolis, that—

	TONS	PER CENT.

BITUMINOUS COAL CONSUMED IN THE UNITED STATES IN 1915, BY USES.

(Table prepared by the Russell Sage Foundation)

* Includes electric utilities.

operators that the setting up of these committees would be a violation of the Sherman anti-trust law, Secretary Hoover promised that the Attorney-General would delegate some one to sit on the Washington committee, and, if necessary, on the various district committees.

"There is no reason whatever for alarm, or for any stampede among buyers of coal," asserts the New York *Journal of Commerce*. Yet, notes the Baltimore *Evening Sun*, "prices jump nearly 100 per cent." The reason for this increase, in the opinion of the Baltimore paper, is that "the great American consumer is an easy mark." And it goes on to clinch its argument by recalling advances of four cents a gallon in the price of gasoline recently, "at the very time that gasoline reserves are greater than ever before."

In close agreement with the *Journal of Commerce* is the Philadelphia *Public Ledger*. Says *The Ledger*:

"Greed is beginning to get the better of the judgment of some coal operators. The game of 'buyers' panic' is being started. Buyers are being encouraged to bid blindly against each other. The stage is being set for the big 'clean-up.' It was to nip this that Secretary Hoover stepped in.

"There is plenty of coal. We are far away from the 'pinch.' Last week soft-coal production marched up to 4,500,000 tons. This means that last week we used but 3,500,000 tons out of the reserve stocks. The non-union mines are ready to increase their tonnage. They need buyers to hurry and support that increase, for in some districts there are miles of sidetrack, blocked and jammed by loaded coal-cars waiting for a buyer.

"Non-union production has increased 1,000,000 tons a week over the tonnage of the first week of the strike. Strip mines are opening in Missouri and through the West, and the West Virginia, Maryland and Kentucky production soon will be swelled by these additions to the growing stream of non-union coal.

"In the very teeth of an improving situation the more greedy of the operators have started the reports of shortage and started price-boosting. They are tacking a dollar or two on the ton and filling the winds with rumors. The operators can steady these prices if they will."

An authoritative word of warning also comes from *The Black Diamond*, a coal organ, of Chicago:

"Coal in adequate quantity at a reasonable price is necessary to supply the railroads with motive power, keep steel and textile plants in the full tide of successful operation, and preserve domestic consumers in comfort. If coal prices are advanced because there appears to be a temporary shortage, industry will sustain a check which will delay the return of good times. There is, too, a tendency on the part of Federal, State and

"This bill calls for the creation of a commission to make a thorough investigation of the coal industry with a view to ascertaining just what ails the business and how it may be cured. The bill would give the commission authority and power to compel, through a court order, any and every person, including coal operators and coal companies, to produce and furnish the commission with full information in regard to their output, production costs, labor costs, sales prices and profits."

The operators' side of the argument, however, as set forth in *The Wall Street Journal*, is that "resales of the same coal through four or five (speculators') hands, with each seller taking a profit" is to blame for rising prices in bituminous coal. According to a statement by the vice-president of the National Coal Association, the average margin of profit per net ton of soft coal in the four years, 1918-1921, was 36¼ cents per ton, or an average return of 9 per cent. on the investment, before interest or Federal taxes were paid.

A ROOSEVELT TO RECONSTRUCT CONSTRUCTION ETHICS

THE CHOICE OF AN ARBITER for America's second largest industry—construction—is naturally classed by our editors with the recent choice of arbiters for baseball and the motion-picture industry. As the New York *Evening Post* puts it, Franklin D. Roosevelt, the new head of the American Construction Council, "takes his place alongside Judge Landis and Will Hays in the class of receivers for big business in moral distress." This distress in the building business, as we are reminded by the Newark *News* and the St. Louis *Globe-Democrat*, was brought on by the revelations of the Lockwood Committee in New York; by the exposure of blackmail, extortion, and other corrupt practices in Cleveland, St. Louis, Kansas City, Pittsburgh, Louisville and Chicago, and particularly by the recent outbreak of lawlessness in Chicago and its connection with the building industry in that city. "The scandals which have been disclosed," asserts the Springfield *Republican*, "have made clear the desirability of a simple code of honesty and recognition of the rights of the public, whose needs make the construction industry possible." By choosing a general director of the building industry, points out the Philadelphia *Record*, "the Council hopes to win the favor of the public."

Mr. Roosevelt will take up his new duties without pay, and it is here, observes the Brooklyn *Eagle*, that his contract differs with those of Judge Landis and Will Hays. The consensus of opinion seems to be that if the former enjoys the same wide powers that Judge Landis and Will Hays enjoy in their respective fields, public confidence in construction will be restored.

One of the first acts of the Council, it says, will be to "establish a code of ethics," which is taken as a frank admission that the public has lost faith in the fairness of building costs. So, thinks the Boston *Transcript*:

"Back of it is the desire to regain the good opinion of the public in those American cities where the building industry has been discredited. Here is additional similarity between the movement and those that preceded it in the baseball and moving-picture fields. Scandal which threatened to deprive the sport of public confidence, and, consequently, of financial prosperity was followed by the conferring of broad powers upon Judge Landis in his capacity as arbiter of baseball. Fear of the adoption of stringent State regulation in order to remove abuses, real and fancied, was influential in the action taken by the moving-picture industry in creating the position held by Mr. Hays. The revelations spread before the public by the Lockwood investigation in New York have doubtless done much to set in motion the movement which has resulted in the selection of Mr. Roosevelt."

The movement is one in which architects, engineers, construction labor, contractors, material manufacturers and dealers, insurance and real estate interests, public utility interests, and the construction departments of the Federal, State and municipal governments are to have a part. By bringing them together a better understanding is to be created. It is proposed that through the cooperation of the constituent groups waste in construction shall be eliminated, standards of efficiency increased, and standards of ethics raised. As

the Brooklyn *Eagle* explains:

"The new plan is a patriotic effort to bring order out of anarchy, which governs building conditions in this country, and to put building once more upon its feet on a fair and reasonable basis, with the profiteering squeezed out of it. To that effort Mr. Roosevelt is to lend his prestige, his invincible integrity, and his level head without other reward than the hope of public service."

"The action of the former Assistant Secretary of the Navy in that respect is what might be expected from a man of his character and ideals. It is more wonderful that the various building organizations should be willing to enter an organization to be conducted with the idea of public service rather than of private profit. The fact is that the members of these organizations are practically in the same position which the theatrical managers recently proclaimed. Each of

them is so busy with his own affairs that he has no time or energy left to give to the problems which affect building as a whole. They need some man to give his whole time to those problems, considered in the interest of the business as a whole and of the people with whom the builders do business."

At present, the Council tells us, the number of workers who, together with their families, depend upon the construction industry for a livelihood, total approximately 11,000,000 persons. Moreover, according to the Washington *Post*:

"Students of the industry set the total deferred value of construction to-day by reason of the war at \$10,000,000,000. Of the housing shortage the general public is well aware, but the country has not enough office buildings or schools, railroads or highways, while sewerage, lighting, water-supply systems and paving are far behind present needs."

How, then, will this new departure in American industry work out in practice? The construction business is generally admitted to be much more complex than either baseball or the motion-picture industry. As the New York *Globe* sums up Mr. Roosevelt's endeavor to reform the building industry from within:

"Mr. Roosevelt is in error if he believes any real results can be achieved without the most desperate of conflicts. He may be able to lead the council to a victory over the bad elements in the building business. Yet he should realize that before he can do this he must fight one of the hardest battles ever waged in industry, a battle quite as hard as any ever fought and won by any one named Roosevelt."

FOREIGN - COMMENT

FROM GENOA TO GERMAN REPARATIONS

WHERE DO WE GO from here? may have been a puzzling question to some nations at Genoa, it is said, but not to the Germans, who had counted heavily on Genoa to find a way out of the reparations tangle and, when disillusion came, realized the dread approach of the day for payment. But the Berlin *Welt am Montag* avers that Germany never had much to expect from Genoa except "a beautiful gesture, or a grand crash." As to the Rapallo Treaty, it declares that the Russians had nothing to lose, and "are in the relatively agreeable situation of a man who hasn't a stitch of clothes, whereas we Germans have at least a shirt, and have risked that to get together with the Russians." Yet to some observers Germany does not seem to be worried half so much about the reparations as France is, and they call our attention to the repeated utterances of Premier Poincaré that if Germany does not pay, the provisions of the Versailles Treaty for such an eventuality must be carried out, either by the Allies together or separately.

Allusion is here specifically made to a speech of the French Premier delivered at Bar-le-Duc, in which he said that despite the disappointments of long months with regard to reparations, it must be kept in mind that execution of the Treaty can be secured "not by precipitate and thoughtless action," but by "persistent and methodic action." However, the Premier went on to say that if Germany deliberately fails to meet her engagements, the Allies "will have the right and by consequence the duty of taking such measures that, according to the Treaty of Versailles, Germany is obliged not to consider as acts of hostility," and that "it would be infinitely preferable" to adopt and apply these measures "by common agreement among the Allies," nevertheless they may be taken respectively by each of the Allied nations. Mr. Poincaré expressed the hope that France in this momentous hour might "maintain the cooperation of all the Allies," yet he added, "we shall defend in full independence the cause of France, and we shall not abandon one of the arms supplied us by the Treaty," for it is not possible that we should permit "our unhappy country to succumb under the burden of reparations, side by side with a Germany that refused to make the necessary effort to free herself from debt."

Characteristic of the English view is the comment of the Manchester *Guardian*, which says in part:

"The measures which M. Poincaré is known to have in

GETTING ALONG SWIMMINGLY.

(Summer sports—some are not.)

—The Bystander (London).

mind include the occupation of the Ruhr district. This step, he says, France is entitled to take under the Treaty of Versailles. It seems to us, on the contrary, to be devoid of any shred of legality. The British did indeed condone the occupation of Düsseldorf and the other two Ruhr ports while denying its legality. But neither this nor any British Government could now consent to a further occupation of German territory in pursuit of indemnities which it knows it can not get and Germany can not pay. Nor could this country for a moment consent to a further occupation by French troops alone. M. Poincaré can hardly be so ignorant of the trend of British opinion as to be unaware of this, and his speech, therefore, in so far as it was meant to be something more than a move in the French political game, is something very like a provocation."

As to the occupation of the Ruhr district, above referred to, some American correspondents at Paris, who are not biased in favor of the French, tell us of rumors to the effect that there is no intention in France of occupying

the Ruhr, because "such action would be too unpopular, and would affect the economic situation too disastrously." One of these informants hazards on such rumor the following prophecy:

"What is planned is of far more subtle import. If action has to be taken, it will be against Bavaria, and in this the reasoning is of remarkable astuteness. In French opinion the reaction which such action would have would not be against France, but among the Bavarians it would be against the Berlin Government. Before he took office it was always Poincaré's declared policy that the only safety for France lay in the separation of South Germany from the Reich, and it is in pursuance of this policy that plans are being made for a demonstration to be made against Bavaria in the event of German failure.

"The expected reaction is that all the blame will be placed by the Bavarians on the Berlin Government and the rift which has existed so long between Berlin and Munich will be widened, to the consequent profit of France."

The suggestions in various quarters that Germany seeks an international loan in order to meet the reparations requirements incites the Berlin *Neue Preussische Zeitung* to object that either a short-term loan of a small amount, or a long-term loan of a greater amount, is impractical unless the reparations figures are reduced. This daily believes a short-term loan would be useless, and that the interest payments, which would be inevitable, would prove too burdensome, coupled with the reparations payments, and in consequence Germany's last economic state would be worse than her first. The Paris *Temps* wonders whether the German Government truly desires foreign loans "under conditions which can be accepted by countries that have a right to

reparations." Then it asks whether the Germans have been maneuvering so that it would be impossible for them to secure a foreign loan, hoping that thus Germany would "escape the sanctions and conditions of a moratorium and gradually escape from making any reparations at all."

The Berlin correspondent of the *Echo de Paris* writes that the feeling of pessimism about an international loan which prevails in Germany is reflected in the press and in conversations he has held with sundry German industrial leaders. One of these men he quotes as saying: "We have no illusions and we know that no nation will lend money to Germany until the reparations figures are set at a practicable level." Another German magnate is cited as presenting this view:

"Until now we have not paid the reparations and in all likelihood we shall never pay them. They insisted on us paying with gold marks, and we didn't have any gold marks, so we issued paper money and very fortunately found enough people in foreign markets who grabbed at this money and gave us the foreign equivalent which we needed. As the result of this maneuver the mark lost its value. But what difference does that make? Business is good in our country, and the great big fact is that Germany is able to work and to produce."

Very different indeed is the frame of mind in France where, according to the Minister of Finance, Mr. Charles de Lasteyrie, reparations are "a matter of life or death." An illuminating statement on the general condition of France is given by this official to the Paris correspondent of a New York newspaper, in which we read in part:

"Since 1920, France has balanced her ordinary budget, thanks to the creation of new taxes, but at the present time it must be recognized this equilibrium is menaced because charges weighing upon the country through non-execution of the Versailles Treaty are increasing while we have reached an absolute maximum of taxation. Through non-execution of the Treaty we have had to advance up to January last 80,000,000,000 francs, not including interest. The French taxpayer, therefore, is paying now five times more than he paid in 1914, and in the face of this situation it is impossible for us to increase his charges."

The finance Minister explained also that as it is impossible to increase taxes, only two ways remain in which to increase French receipts. The first is to "improve the method of collection and

make taxes less onerous," and the second is to "prevent tax dodging, to which the Government is bending every effort." This high French authority tells us further that:

"France still is one of the wounded of the war. She is recovering. Interest on treasury bonds has been reduced and the market again thrown open for French rentes. To-day 6 per cent. rentes are dealt with freely in the open market like war loans, and this despite all the difficulties the Genoa Conference created in financial centers.

"France is the only country which has not constructed a single warship since 1914. From 1,807,000,000 francs in 1913, her military expenses rose to 36,120,000,000 in 1918. In 1919 military expenses fell to 18,185,000,000; in 1920 to 7,648,000,000; in 1921 to 6,312,000,000; and in 1922 to 4,910,000,000 francs. In the present budget military expenses are 5,000,000,000 francs.

"France by reason of her geographical position and recent events is the guardian of order in Europe. She could not show her desire for peace any better than by the figures I have given."

BRITISH OPTIMISM ABOUT PALESTINE

A GREAT DEAL OF DISCONTENT exists in Palestine because of the cry that it was being "given over to the Jews," but Viscount Milner, distinguished as an administrator for the British Empire, assures us that harmony will be attained if Britain pursues a sound economic policy and does not allow the meaning and intention of the Balfour Declaration about Palestine to be distorted by extremists. Returning from a tour of the country Lord Milner express his optimistic feeling to the Paris correspondent of the London *Times*, who reports him as saying that it is a mistake to regard Palestine as a poor country from the economic standpoint, and he reminds us that in former days it used to support many times the 700,000, which is its present population. Lord Milner concedes that the country is impoverished by centuries of neglect and mismanagement, tho he did note that improvement had been made since his earlier visit two years ago. The greatest need is for improved means of transport and communication and for the development of agriculture, because "present methods are primitive in the extreme and much good land is wasted." Lord Milner is reported as having said further:

"Foolish and extravagant things have been said by certain persons, implying that the country was going to be handed over

"THE FOOL IDEALIST."

GERMAN SOCIALIST: "No more war. . . . we have seen the last war!"

MARS: "See this treaty? All the conditions of the new war are set down right here."

—Kladderadatsch (Berlin).

to the Jews. This has frightened the Arabs and the Christians, and upon their not unnatural fright agitators have worked with exaggerations and lies. But if peace is kept the people will presently find out that their fears, however natural, were unfounded. The great point is that it is not what the Government has done or is doing that is objected to, still less what it means to do, but what people have imagined or been told it means to do. I often asked people who protested so strongly against the policy of the Government for a few instances of what they objected to. It was almost always something that was going to happen.

"The best evidence that the people generally have really nothing to complain of in the attitude of the Government is that wherever I went they were begging that their present British District Governor or sub-Governor should not be removed.

"As a matter of fact, the number of these officials is being reduced from motives of economy, very likely under pressure from home. Personally I regret this, as I think it is too soon to reduce the number of competent British officials. Moreover, in some cases reduction involves something very like a breach of faith, and it has given a shake to the service, which is a pity, for it is a good service. But I really am not competent to discuss the details of this business. My point simply is that since the people, especially the Arabs, are so anxious not to lose the British officials to whom they are accustomed, it is evidence that they have not been unfairly treated by them."

Turning to the political aspect, Lord Milner declared that Britain's policy toward Palestine is "reasonable" and should be followed despite the present unrest, for without "the steady hand of the Government upon them the people would be at one another's throat," and he added:

"In many places a simple system of irrigation would work wonders. There is also room for afforestation, which would be easy to effect, and a great boon to the country. There is need of ports; both Jaffa and Haifa are still merely open roadsteads. The only danger I see for Palestine, economically speaking, is that she should be starved of the means of development. It is not much money that is needed. Palestine is a small country, and could well afford a moderate loan which would put her on her feet. It is a mistake to suppose that Palestine will be a great burden to the British taxpayer. In a few years she ought to be no burden at all, unless by starving her we keep her one."

As to the outlook for the Jewish emigrants, Lord Milner believes that most of the Zionist Jews "realize they have got to work" and that only by work and the production of fresh wealth can Jewish emigration be made a success. He was much impressed by the evidences of development in the Jewish colonies he had seen, we read, and the others might be less prosperous, still it is to be remembered that there are "always some failures in any big policy of settlement." Moreover, in his judgment, "the Arabs will be quite willing to work peaceably side by side with the Jews when they find their own interest being advanced thereby."

By way of contrast to Lord Milner's optimism, Rome press dispatches state that Monsignor Barlassina, Patriarch of Jerusalem, has gone to London to take up with the British Government the question of Zionism in Palestine. An American correspondent at Rome, writes that "sensational charges against the English administration" were made by the Patriarch at a public meeting, when he declared "that not only was England allowing the Zionists to develop their idea of dominating Palestine, but was putting ardent Zionists at the head of its administration in the Holy Land." This informant says also that he asserted the native population "are not in favor of the entrance of the Jews, and are greatly affected because of the Zionist influx."

TROTZKY'S REPLY TO RUSSIA'S DEFAMERS

IN FIVE YEARS OF REVOLUTION Soviet Russia has learned much and relinquished nothing, according to Mr. Trotzky, who asserts that "the capitalist world, as it emerged from the hell of war and as it now lives, gives us no reason to revise our fundamental views." Capitalism is "condemned by history," and "the future belongs to Communism," it is asserted by the organizer of Russia's Red army, who declares himself in the preface to a book by A. Morizet on Soviet Russia, which has just been published in Paris. The purpose of the book, as we gather from the reprint of the preface in *Soviet Russia* (New York), is to "tell the truth about the first Workers' Republic to the working masses." This service is said to be the "most important and the most valuable thing in the world," because Russia has been "lied about so much." Mr. Trotzky proceeds:

"The capitalist and Social-Democratic lies about Russia may be divided into two categories. To the first belong the products of a malicious and self-seeking imagination: stories of the banquets of Soviet dignitaries, of their mutually arresting each other, of artillerymen 'nationalizing' the bourgeois women, etc., etc., etc. These lies are all full of self-contradictions, are monotonous and stupid. Only the most backward wives of footmen and lackeys and a few Ministers of State believe them. To the second category of lies belong the pictures that have been assembled from individual true elements. These are lies on a higher plane. Their domain is larger, their sources more plentiful. Evil intentions, equipped with photographic cameras, can take a number of views of the life of present-day Russia, which, when put together, may afford genuine delight to any reactionary bourgeois. The Revolution is a destruction in the name of a new creation. Only he can understand the Revolution, in its sublime as well as in its gloomy sides, who is able to trace its internal inevitability, the struggle of its living forces, the logical sequence of its stages. I do not mean to say that the Revolution is infallible. But one must be able to apply a large historical yardstick in order to understand its work and its errors."

When the Soviet Russians approached the task of creating an army, Mr. Trotzky goes on

to say, there was still a great number of French officers in Russia who were extremely skeptical about the Russian attempt. The reports of these officers, Mr. Trotzky feels perfectly sure, were contemptuous of the whole Soviet undertaking for, he tells us:

"These uniformed petty bourgeois saw in the Revolution only destruction, cruelty, disorder, chaos. To be sure, all these things are contained in the Revolution. But the Revolution is also something more than that. . . .

"In the last few years I have frequently cherished the thought of going through the British newspaper press at the time of the great French Revolution, of studying the speeches of the ministers of that day and their political lackeys, of the Clemenceaus and Hervés of that time, merely in order to draw up a sober parallel between the reactionary calumnies uttered by ruling England at the end of the 18th century and the calumnies which the *Temps* and those that babble in its train have circulated in recent years concerning Soviet Russia. I regret to say that I have thus far not had the time to do this work. But I am certain that there would be remarkable coincidences. The radical English contemporaries of Robespierre no doubt pointed out the then perfectly justified analogies with the English Revolution in the 17th century. And this would inevitably release the protests of the honorable British reactionary historians who would shout: 'The English Revolution in spite of its "excesses" was a mag-

A SWEDISH SKETCH OF TROTZKY.

Who defends Soviet Russia against her "defamers" by citing the French Revolution, and also denies that the Russian state has gone over to capitalism.

—Kasper (Stockholm).

nificent event; but the French terror is merely a mutiny by an ignorant and bloodthirsty rabble."

Mr. Trotzky goes on to pillory certain French labor leaders who "point out with malicious glee that we are returning to capitalism," but their gloating is premature, he asserts, and goes on to explain:

"The Soviet Republic socialized the banks, the industrial enterprises, the land. To return all these things to the former

SOVIET FRATERNITY.

LENINE: "Nor must you ever forget, slave, that in Soviet Russia all men are brothers."

—La Victoire (Paris).

owners would require a previous unseating and slaying of the Revolution. But we are further removed from this condition than ever. You may say with full truth to the French proletariat that we are not giving up the Revolution, but it is quite true that we have changed our methods of socialistic construction. We maintain the enterprises in the hands of the working class, but we are applying methods of capitalistic calculation and marketing, in order to test their profitableness. It will not be possible, until we reach an incomparably higher stage in socialistic evolution, to conduct all the enterprises from a single center and to distribute the necessary workers and resources to them on the basis of a previously determined national plan. The present period is of preparatory character; the market remains. The nationalized industrial enterprises have an independent life within certain limits; they buy and sell, and thus create the bases for a future unified socialistic economic plan. Thus we are simultaneously granting capitalistic concessions to certain enterprises. The economic backwardness of Russia and its inexhaustible natural resources afford a wide scope for the application of concessioned capital. The State retains in its hands the means of transportation and the most important industrial enterprises."

Now Mr. Trotzky admits a certain competition between the "capitalistic concessioned enterprises and the homeogeneous enterprises of the Socialist state in which the latter have unquestionably the upper hand." The crux of the question lies in the "balance of power" and we are further advised:

"The reformists at one time thought that the cooperatives would gradually absorb capitalism. So long as the bourgeoisie, defending private property in the means of production, remains in power, this hope will be a mere utopia. As for Russia, we may say that as long as the working class maintains its power and as long as the state has the fundamental industries in its hands, the 'imperceptible and smooth' reconstruction of capitalism, with the aid of concessions, is hardly more capable of realization than the transformation of a capitalist order of society into the Socialist order of society, with the aid of the cooperatives. We have no reason to speak of a return to capitalism. We have only altered the methods of socialistic construction."

END OF DENMARK'S LONG LOCKOUT

THE GREATEST LABOR STRUGGLE in Denmark since 1899 came to an end by compromise after a two months' lockout and while the labor press say the workers have gained a victory, journals more sympathetic toward the employers regret that so much time had to be lost in the dispute and can see no great advantage accruing to the joint interest of the employer and the worker. Early in February, we are reminded, the Danish Employers' Association declared a lockout of workmen belonging to the unions, because the unions rebelled at a proposed reduction in wages. The chief points of the compromise, by which the lockout was ended on April 7th, are listed as follows:

A general reduction of 15 per cent. in wages. The lesser paid employees suffer a slighter reduction, but not less than 12 per cent. Overtime work commands an additional payment of 25 per cent. for the ninth hour and of 33 1/3 per cent. for the tenth hour. The original agreement on an eight-hour working day is safeguarded, but various phases of this question are to be studied by a representative committee. Also, the division of the working hours is to be submitted to further negotiation. The present compromise agreement, we are told, is valid for one year and, if it is renewed, the wage schedules are to be revised only once a year. All other matters of dispute are to be referred to a committee.

The settlement was voted on by the General Assembly of the

A LEAGUE OF NATIONS DINNER.

THE TOASTMASTER: "Before we leave the table, I ask the delegates in the interests of humanity and on behalf of the starving Russians to stand in silence for a few moments."

—Simplicissimus (Munich).

Employers' Association and the Labor Unions and we are told that of the Employers' Association 394 voted for the compromise and 41 against, while among the Labor Unions the corresponding vote was 385 to 122. The press of both sides in the struggle welcome its ending and, the leading organ of the Conservative party, the Copenhagen *Berlingske Tidende*, which rather closely represents the Employers' view-point has this to say: "Those who have made the peace are content with their work and show it. Officially as well as unofficially the representatives both of employers and employees declare that the peace satisfies them and this satisfaction is apparent among the general public." But this

newspaper believes that the settlement ought to have been obtained without the costly and protracted industrial stoppage which the public has had to suffer during two months and it adds the ominous prediction:

"The reduction of wages secured through the compromise is not sufficient to give a new impetus to our industrial life. Even with this reduction, wages are higher in Denmark than in other countries. What is more, certain well-known conditions give foreign competition an enormous lead over our handicapped industries."

On the other hand, as sustaining the cause of the workers, the Copenhagen *Socialdemokraten* characterizes the compromise as "an honorable peace for the labor unions." Also it maintains that the employers have been defeated at every point and it is particularly pleased that the principle of the eight-hour day "stands unshaken and unabridged." The employers expected an easy victory, according to this journal, but they had to "kneel down to an agreement with an equal party that could not be defeated and with whom a compromise was reached only by the surrender of exorbitant demands one by one."

The Copenhagen *Politiken*, organ of the Radical Lefts, has occupied a somewhat middle ground by being rather unsympathetic toward the employers and at the same time unwilling to support all the demands of the workers. This newspaper speaks strongly for a compulsory arbitration law to prevent similar costly labor conflicts, and issues a warning to the conservative forces in these words:

"The only possible way that the employers can moderate the storms hovering on their horizon and come to an understanding of the political importance of the outcome of the lockout, is to undertake seriously the task of making the workers personally interested in their industrial concerns."

BERLIN AS BABEL

FUGITIVES FROM MANY COUNTRIES have flocked to Berlin, and it would seem that the most notable are banded in cliques of Hindus, Egyptians, Turks, and "even Irishmen who meet in obscure cafés and plot the overthrow of the British Empire." We are told further by the Berlin correspondent of the Manchester *Guardian* that Berlin harbors also many Hungarians—most of them Jewish—who have fled from the White Terror. They are said to be remarkable for their political enlightenment and artistic culture, and they have a scientific bent that "runs into psychology, hypnotism, and the occult." Thanks to the White Terror, many of the best minds of modern Hungary are not in Budapest, but in Vienna and Berlin, this informant relates, and proceeds then to draw a picture of the Russian refugees who are most conspicuous in Germany's Babel. All along it has been shown that the overthrow of the old régime in Russia sent colonies of Russians to southeastern Europe in search of shelter, while commercial and industrial classes are well represented in England and in France. But Germany seems to have drawn the great bulk of Russians, and *The Guardian's* correspondent writes:

"They number more than a quarter of a million in all Germany, and over a hundred thousand in Berlin. A few of them are Communists. Many of them are Jewish Russians who held securities in Germany before the war or who have speculated or profiteered there since the war.

"The majority are refugees from the Revolution, and include much of what is left of the Tsarist aristocracy—princes who once owned entire provinces, starving their peasants for profit and having them beaten for stealing wood, princesses who had servants, chambermaids, and footmen to wait on them, merchants who once had town and country palaces, generals whose bright uniforms and starred breasts augmented the brilliance of the Tsarist Court. Most of them live here in abject poverty, and some are so poor that the German Government keeps them in

concentration camps to save them from perishing in the streets of Berlin."

There is a type of Russian aristocrat in Berlin, who is probably the last of his kind, and the writer describes him as "very handsome, affable, and a little effeminate." His manners are perfect, his movements graceful, and it is averred that however poor he may be, his dress is always immaculate. Among the more stolid Germans he "moves with the elegant, condescending charm of a superior being." His taste is exquisite, altho a little old-fashioned, he has a natural gift for music and plays the piano superbly. *The Guardian's* correspondent continues:

"He is always in debt, and if by chance he has money he spends it lavishly, giving generously to his poorer compatriots. If he has no money he borrows, and spends what he has borrowed as lavishly as tho it were his own. He will give to a friend in need rather than pay a debt owing to one not in need, even if he is threatened with the law.

"He is capable of the greatest selfishness and neglect of others, tho not through meanness—he is incapable of meanness. His selfishness is that of a child. It is sometimes so great that he seems unaware of the existence of other people, except as objects of his affability. And yet his gestures and his most unconsidered actions are generous and self-sacrificing to the point of lunacy.

"His education is made up of shreds of history imperfectly remembered and completely misunderstood, and of literature chiefly Russian, French and English. His favorite poet is Byron. Of scientific knowledge he has hardly a trace, altho his curiosity is agreeably stimulated by hypnotism and telepathy.

"His politics are made up of a few simple crudities that have emerged from his pseudo-historical education. For him revolutions in general and the Russian Revolution in particular are the work of Jews and Freemasons. He is beginning to abandon all hope of a Tsarist restoration—Kolehak, Denikin, Yudenitch, Wrangel failed because the French and British Governments under the influence of Jews and Freemasons did not give these crusaders sufficient support. The Russian famine was a hopeful sign—perhaps it would have weakened the hold of Lenine and Trotzky—but that hope, too, has vanished and the aristocratic refugee is moved to pity by the famine and typhus stricken peasants of the Volga and is willing to play the piano or the balalaika in aid of them."

Real history rolls on altogether unlike the history this Russian aristocrat learned at home, we are told, for the splendor of the past Tsarist court is gone, and it is "beginning to fade from his mind as a future vision." He feels that there is "a discord in the universe, that there is immanent injustice," but he accepts it with truly Russian fatalism, and the writer asks:

"Indeed, what can he do? He feels that things have changed, but that he himself has not changed, for he has learnt nothing and has forgotten nothing. He will remain as he is, charming, superfluous, and innocently wicked, the helpless child of circumstances far too big and complex for his understanding.

"This description fits many Russians here in every detail. Some it fits in some details. Those whom it fits in no details are exceptional.

"Thus it is that the achievements of the Russians here in Berlin are the achievements of the esthetic temperament rather than of character and intellect. Whatever they do has charm and beauty. The singing in German cabarets is nearly always cheap and vulgar. But when the Russians sing the whole audience is moved by the depth and the melancholy of the Russian soul. They are poor and their cabarets and restaurants are unpretentious, but their cooking is infinitely superior to German cooking. Their stagecraft is a long way behind the German, which is the most daring and progressive in the world, but their acting is so full of feeling and temperament that average German actors are stiff and wooden by comparison. Their dancing is so superior to anything known that no German dancer, however ambitious, could even dream of rivaling them.

"German art, like the German stage, is progressive and full of character and daring. It is more significant and important than the Russian, but it is inferior in beauty, elegance, good taste. The Russian refugees have contributed hardly anything to the intense intellectual and political life of Berlin, but in everything that makes for refined charm, elegance, esthetic enjoyment, and forgetfulness of everyday cares their contribution is unprecedented and unsurpassable."

SCIENCE - AND - INVENTION

TURNING LAKES INTO FARMS

THE MYRIAD PRETTY LAKES of Wisconsin and Minnesota are doomed to vanish, and in their place will appear farm-lands and homesteads, growing wheat and corn and still more valuable crops of boys and girls. So, at any rate, thinks Dr. J. R. Nannestad, of Albert Lea, Minn. "It will not be very long before Minnesota and Wisconsin will miss their

country. Nothing can be farther from the truth. All our lakes started their young life during the glacial period. They are part of our heritage from the glacial period—not so very long ago. Every close observer of Minnesota knows that our lakes are slowly but surely disappearing.

"A great many meadows, swamps and sloughs speak to us to-day of their past history as lakes. Not very long ago Freeborn County contained possibly twice or three times as many lakes as it does now.

"If anybody is in doubt as to the future of our present lakes, he need only look at Twin Lakes, Bear Lake, and others. They are all filling up. Every little creek and rill that runs into them is slowly filling them up with dirt. Water-plants are flourishing around their borders and way into their waters. The time is not so very far away when all our lakes will be history. At best lakes are only short-lived creatures in the history of our earth.

"Our biggest lake in the county to-day is no doubt Albert Lea Lake. But not so very long ago we had a lake in our county much bigger than Albert Lea Lake—four or five times as big.

"Altogether the lake covered a territory of some 27,000 acres or considerably more than a township.

"For want of a better name I shall call it the 'Vanished Lake.'

"In its original splendor it was a beautiful expanse of water. It ranked in class with such lakes as Minnetonka and Cass Lakes. It never was very deep, but in stormy weather it rolled with big heavy waves. It swarmed with fish.

"Just take a glance at the divide between the Geneva Lake and the Payne Investment Company lands, where the dam is put in to hold the waters of Geneva Lake.

"There is very little difference in the level between the lake and the Payne Investment Company farm lands. If the State would allow it no doubt the Payne Investment Company could drain the whole Geneva Lake by simply extending their open ditch a few feet farther. Not so very long ago, probably less than a hundred years ago, for some reason or other, a sand dune or sand ridge was formed at the narrow neck and two lakes were separated. I do not know what caused the ridge to be formed. It may have been the work of our old friend the beaver, the original civil engineer of Freeborn County. At any rate the division was made and the big lake, deprived of all the water in Geneva Lake, was considerably reduced. Its original majesty and beauty was lost. Instead of a lake it became largely a marsh."

One of the landowners near the lake, and a friend of his, conceived the idea of draining the old lake bottom. They started a movement to dig a

big ditch for this purpose. It was in 1908, when drainage on a large scale was a new idea in Minnesota. What was the result? The surface water disappeared. But there was no sub-drainage. Without subdrainage, says Dr. Nannestad, land can not be farmed, can not be turned into field. The feeling among the farmers was bitter. They had paid out their hard-earned money and received very little in return. The story goes on:

"The years rolled by. Things were at a deadlock. Then something happened. One day Mr. G. H. Payne of Omaha dropt in. He bought the Barber lands and some additional acres—a total of 14,000 acres. Mr. Payne maintained that the question of sub-drainage could be solved by deepening the big ditch. During the years that had passed public sentiment had changed considerably. Farmers who had drained their lands had found out that these drained lands were the very richest part of their farm.

"In the meantime Mr. Payne had not been idle. He was con-

THE RETREAT OF THE TEN THOUSAND.

"The myriad pretty lakes of Wisconsin and Minnesota are doomed to vanish." This striking map shows what Minnesota will miss if this prophecy comes true.

beautiful lakes," he writes in a letter to *THE DIGEST*. In a contribution to *The Evening Tribune* (Albert Lea) he gives an account of what has happened to the largest lake in his county. We recently quoted an authority to the effect that the land of the Middle West is drying up. The farmers around the northern lakes are evidently satisfied with this process, so long as it enables them to substitute farmhouses and wheat-fields for lake or swamp regions. Writes Dr. Nannestad in the paper named above:

"Among her many natural beauties, Freeborn County also boasts of a number of beautiful lakes. If a man could climb to the top of a hill high enough to give him a view of the whole county he would be able to count some fifteen or twenty lakes—all within our county limits.

"This seems a great deal. But still, not so very long ago, we had a great many more lakes in the county than we have to-day. Many people believe that our lakes are permanent features of our

vinced that even the first ditch would make it possible to drain the upper lands near Geneva Lake. In 1919 he started to run big open ditches every quarter mile. A road appeared around every section. As soon as the ditches were dry big tiles were put in. Finally the ditches were filled in and levelled.

"So—lo and behold—the ugly marsh was changed into snug little 80-acre farms of high grade land served by an excellent system of roads. In this way Mr. Payne developed 3,000 acres a year. Six thousand acres out of his 14,000 are already in crop, or ready for 1922.

"The soil of the old lake bottom is deep, underlaid with clay. The decayed vegetation of ages gives an inexhaustible supply of fertilizers. The land has already proved its value. In 1920 and 1921 it raised excellent crops of flax, rye, corn, potatoes, soybeans, sugar beets and clover.

"There is something wonderfully attractive in the idea of changing a worthless marsh into homes where men and women can live in happiness, and where the laughter of children is heard instead of the howls of the wolf.

"To drive over the land to-day—when the growing crops raise their lovely heads instead of the old marsh grass—is a great pleasure. It will not be long before the whole marsh will be transformed into beautiful farms, into homes.

"By that time the Vanished Lake will have served its purpose. It will have finished its life's cycle. Once more it will be dry land as it used to be before the ice made it into a lake. And where the fishes swam and the billows roared the farmer now plows his field.

"The Vanished Lake lives in memory only."

TO THE POLE BY PLANE

AVIATION WILL PLAY a capital part in Captain Roald Amundsen's polar expedition of this year. It is a renewal of his attempt to drift over the Pole with the ice-pack, but as it is very unlikely that his vessel will go precisely over the end of the earth's axis, he counts on getting there by a side trip, using an airplane from the nearest point. Outfitted and provisioned for a seven-year cruise, the power schooner *Maud* left Puget Sound early this month with Captain Amundsen and a crew of picked men. The *Maud* carries with it two airplanes, one of which is to be utilized, if necessary, for the final dash to the Pole and return. Says Lawrence W. Pedrose in *Popular Mechanics* (Chicago):

"Financed by the Government of Norway, Captain Amundsen left Christiania in July, 1918, and entered the Arctic through Bering Strait in the fall of the same year, intending to freeze in with the ice-pack and drift across the polar sea. The *Maud* lost its propeller near Cape Serge, Siberia, in October, 1921. Short of supplies, Captain Amundsen returned to Nome, Alaska, and from there came to the United States.

"Returning to Norway, Captain Amundsen perfected plans to continue his search for the North Pole. There he procured the services of a Norwegian Army flight officer to pilot the airplane, an all-steel plane, obtained in New York, which held the endurance record, having made a non-stop flight of 2,400 miles a few months previously. Because of its bulk the machine was to be flown across the American continent before being dismantled and stowed away in the *Maud*. Unfortunately, it was wrecked on the trip, but this did not alter Amundsen's plans, and the large plane carried will be able to take the whole crew out of the Arctic, should the ship be crushed in the ice.

"Another modern invention, with which the ship will be equipped, is a long-range radiophone outfit, and it is not beyond the bounds of possibility that this Arctic voyage, far from being the lonesome venture of earlier explorers, will be relieved by frequent exchange of news or other information with the centers of civilization.

"Altho provisions enough to last seven years are carried, Captain Amundsen believes his ship will emerge in the Atlantic Ocean within three to five years. It is expected the ship will reach a point nearest the Pole in the early spring of 1924. With the *Maud* as a base for operations, the big plane will then be brought into use for the final dash to the North Pole, while the other plane, a Curtiss Oriole type, christened the *Kristina* before it was delivered to the explorer at Curtiss Field, on April 6, will be used for scouting purposes and other incidental service. It is equipped with an electric self-starter, can stay in the air seven hours, and like its mother-ship will fly the Norwegian colors."

If Amundsen is to stand where Peary made his North Pole observations on April 6, 1909, the monoplane may be very useful,

thinks *The Times* (New York). As quoted in *The Aerial Age* (New York) this paper says:

"The drifting *Maud* should eventually shake herself free of the ice and emerge into blue water somewhere off the coast of Norway, unless the pack destroys her, but the chances of her passing very near the Pole are not bright. At some point the explorer

FOR PLANE SAILING TO THE NORTH POLE.

Amundsen in his airship that will put the picturesque teams of shaggy Eskimo dogs into the ranks of the unemployed.

would probably have to leave her and march or fly in the direction of the Pole.

"There might be a risk in seeking the ship after a 'dash' toward the Pole if it were necessary to depend upon dog sleds. The *Maud* might not move very fast, but if the explorer and his picked companions were absent from her for weeks there would be danger of missing her altogether. Captain Amundsen wisely decided to take two airplanes with him, one for important flight work and another for scouting. The big metal plane has already flown in the Arctic Circle at very low temperatures. Both machines should be great time-savers if the *Maud's* drift carries her within quick flying-distance of the Pole.

"Admiral Peary foresaw the use of the airplane for Arctic exploration as long ago as 1912. In his book 'The Secrets of Polar Travel' (1917), he said: 'Five years ago at the annual dinner of the Explorers' Club I ventured the prophecy that in a few years the polar regions would be reconnoitered and explored through the air.' He made his 'drive' for the Pole from Cape Columbia on the northern coast of Grant Land, which is less than 500 miles south. He went on to say:

"From Cape Columbia it is less than 1,400 miles in a straight line directly across and over the Pole to Cape Chelyuskin on the Siberian coast, the most northern point of Eurasia. To Wrangell Island across Crocker Island and the entirely unexplored region between the Pole and Bering Strait it is about 1,500 miles. From Cape Columbia to Spitzbergen it is 900 miles, to Franz Josef Land less than 1,000 miles, and to Point Barrow about 1,400 miles.

"It is relevant to note that the metal monoplane acquired by Captain Amundsen has kept the air for more than twenty-six hours, and has already flown from Mineola to Fort Norman in the Arctic Circle, 6,000 miles. It is conceivable that under favorable conditions this plane could be flown from Point Barrow to

North Cape, Norway, with a stop in the neighborhood of the Pole, but Raold Amundsen is too experienced an explorer to face such desperate risks. The drift by the route the Melville-Bryant eask No. 2 was supposed to take is theoretically both safe and sure, and the North Pole can best be reached by an airplane in the hands of those who understand its limitations."

METERED TELEPHONE SERVICE

WHY SHOULD NOT telephone subscribers pay exactly in proportion to the service they get, just as do users of electric light, or of water in places where the houses have meters? Some telephone service, to be sure, is on a call basis, which is something like the method of charging so much "per faucet" for water. One faucet may run a hundred times

"These changes are made possible through the development of a device known as a 'telechronometer,' which accurately measures the length of time each telephone is used by the calling party. Incoming calls are not registered. For more than a year the telechronometers have been tested, and last December they were ordered placed on all telephones in the Everett system. Just recently the work was completed, and the change made from a flat-rate basis to a 'pay-for-what-you-use' system. The ceremony of throwing the switch that turned the current into the new system was witnessed by a large number of engineers, public utility officials, mayors, councilmen, and others, from the Pacific Northwest.

"Among other advantages of the telechronometer, the company claims that it will discourage and probably eliminate 'listening-in' on party lines, as it will cost the eavesdropper money to take down his receiver and gather the neighborhood gossip; unnecessary and frivolous conversations will be reduced to a minimum, and the use of ten, eight, six, and four-party lines will be increased, because there will be less traffic on the lines.

"Tests made with the telechronometer while the system was still on a flat-rate basis showed that 50 per cent. of the subscribers used 78 per cent. of the service at a cost of .64 cent per 'telechrone,' which is the term used for one minute of conversation. The other 50 per cent. used only 22 per cent. of the service at a cost of 2.27 cents a telechrone. Yet all paid the same flat rate for a similar class of service.

"Telephone service is now given for as little as \$1 a month, which entitles the subscriber to 60 telechrones a month. If he uses more than that amount he pays one cent a telechrone for it. Single-party business telephones that formerly cost \$6 a month are now \$5.25 a month, which entitles the subscriber to 600 telechrones, or almost 24 minutes of conversation, each business day.

"The telechronometer is a little device located close to each telephone and registers the time consumed by the calling party, after 'central' has made the connection. Registration is stopped the instant the receiver is replaced on the hook. No influence outside the control of the subscriber can cause registration.

"The inventor describes the telechronometer as a train of gears that controls the dial pointers which registers in tens, hundreds, and thousands. Movement of the meter is caused by a polarized relay, which operates as follows: When a subscriber removes his receiver from the phone and the operator has made the desired connection, current flows from the central battery to the telephone transmitter and the telechronometer begins to register, and when the receiver is hung up, the current is reversed and the meter stops registering. Thus the pointers on the dial measure the exact time of the conversation.

"The apparatus at the central office consists of a duplicate pole-changing switch, each set being controlled by a standard time clock. The unit of time movement of the pole-changing switches for local service is 15 seconds, and the meter dials register one unit for every four current changes from the central pole changer.

"The two big clocks located in the central office of the Everett system are guaranteed to operate with no more than 10 seconds of variation in 24 hours. Any defect in the meter would only cause it not to register, and the telephone company is willing to take this chance."

WERE THE CLIFF-DWELLERS CANNIBALS?—Did the prehistoric cliff-dwellers eat human flesh? George H. Pepper, of the American Museum of Natural History, points to evidence unearthed by him in the ruins of the great walled-in town of Pueblo Bonito in Chaco Cañon, northwestern New Mexico, as indicating that they did so occasionally, either through stress of hunger, or in the performance of some mysterious religious rite. Says Science Service's *Science News Bulletin* (Washington):

"In some of the upper rooms of this silent stone city, charred and cracked human bones were found scattered about with animal bones which had apparently been part of the meal. 'Skulls and other portions of the skeletons presented the same appearance,' says Mr. Pepper, 'as did the animal bones broken open for the extraction of the marrow. There was no evidence of human bodies having been buried in rooms above the first floor, nor was there any evidence of there having been a fire in the room.' Whether this ghastly feast was the result of some Russian-like famine or part of a ghoulish religious rite is a mystery to which there is as yet no clue. This pueblo was built years before the Spanish Conquest of Mexico and investigations show conclu-

TO METER TALK: THE "TELECHRONOMETER."

as much water as its fellow, and likewise one telephone call may consume an hour while the next takes thirty seconds. The only fair way would seem to be to charge for the exact amount of electricity, or gas, or water, or talk, that is used by the subscriber. Arguments of this sort have evidently made their appeal to the citizenry of Everett, Wash., where, we are informed by *Popular Mechanics* (Chicago), the first metered telephone service in the world, with 6,000 subscribers, was established recently. It seems that the new rates, which are on trial under orders of the State Board of Public Works, are based on the time consumed in actual talking, as gas, electricity, and water are metered. Says the magazine named above:

"Under this system the service company asserts that it is possible to reduce the cost to 85 per cent. of its subscribers and increase the capacity of its plant by 2,000 telephones without adding to the exchanges.

HAVE WE GONE TOO FAR? PASSENGER-TRAIN OF TO-DAY AND ITS GRANDPARENT OF 90 YEARS AGO.

At the right is the first steam locomotive in New York State, the *De Witt Clinton*, under its own steam, hauling a train of early passenger coaches, weighing less than two tons each. The modern Pullman weighs some 90 tons. Is the modern car "overweight" and due to "reduce"?

sively that it was occupied for many years—perhaps centuries. The later architecture is clearly superior to the older portions and shows that these Indians had reached a high plane of development. Nowhere in the Southwest have there been found such masses of turquoise beads, pendants and inlays as were discovered among these old Bonito people whose esthetic attainments are further shown by the elaborately decorated stone mortar and the designs in color on the various skilfully wrought ceremonial articles found in the council chambers of these cliff-dwellers."

ARE OUR RAILROAD CARS TOO HEAVY?

AN OCCASIONAL ENGINEER began to ask this question in public over a quarter century ago. Henry Ford answers it in the affirmative very positively. A writer in *The Scientific American* seems to agree with him. For many years past, he says, he has been watching with interest the steady increase in the size and weight of rolling stock. This increase has taken place in agreement with the well-proved fact that the larger the unit for the transportation of freight and passengers, the more cheaply can they be carried. This is true both of the steamship and of the railroad car; but it is recognized among steamship men that, because of problems of operation peculiar to a ship of enormous size, there is a limit to which increase of dimensions can profitably be carried. So true is this that it is generally agreed that not for many years to come, if ever, will another *Leviathan* be built. He goes on:

"Now, we are inclined to think that the time has arrived when the railroad man should ask himself whether he has not reached, or indeed exceeded, the limit of size and weight in freight and passenger-cars, with coal-cars of 120 tons capacity, and Pullman cars that are about 90 feet in length and approximately as many tons in weight.

"We are well aware that great size of the individual unit has always been a marked characteristic of our American railroads, and that this is due both to the geography of the country, with its vast distances to be covered, and to the demand of the American people for increased comfort, particularly in transcontinental journeys. We are not now, however, contesting the reasonableness of the demand for great size and weight in our rolling stock, but we do wish to put the question up to the practical railroad man whether in meeting these conditions we have not in, let us say, our 90-foot Pullman car gone, a little too far.

"The Pullman car is a 90-foot bridge structure carried upon end piers or supports represented by the two trucks. Now the weight of a bridge may be said to increase, roughly, as the square of its length, and it can readily be seen that, as between a train made up of 60-foot cars and one made up of 90-foot cars, there would be a very large saving of dead-weight in favor of the short-car train. In answer to the statement that the weight of a Pullman car makes for greater ease of riding, it is sufficient to say that

altho this was true in the days of light rails and indifferent roadbeds, it has but little weight in these days of 100-pound steel rail, and track with eighteen inches of stone ballast.

"As to the other fallacy that the great weight of the Pullman of to-day is conducive to safety, it may fairly be answered that, considered by themselves, superfluous weight and momentum are positive elements of danger in collision. It would be possible to build your lighter 60-foot car with as much relative strength to resist the effects of collision, as is shown by the ponderous 90-foot car. As a matter of fact, a given number of passengers carried in a 60-foot car train of Pullmans would be subject to less danger in the event of derailment or collisions than the same number if carried in 90-foot cars, the inertia of the train being considerably lighter and the destructive effects less. Of course, we are supposing that in both cases the cars are built of steel, and upon approved methods of construction. Additional saving would be effected by substitution of four-wheeled for six-wheeled trucks.

"Then there is the question of upkeep of tracks and bridges. The lighter concentration of weight on the four-wheeled trucks would be less severe on the track; the impact at rail joints would be less, and the bridge engineer would find that he could lighten out the floor system of his bridges to no little extent."

THE SAFETY CRUSADE FALLING OFF

AN ALARMING INCREASE IN ACCIDENTS in some factories where the "safety-first" movement has been allowed to lapse is reported by Verne Edwin Burnett in *Industrial Management* (New York). "One of the world's greatest movements," as he pronounces it, with its splendid rise since the opening of the century, has noticeably declined during the past year, he asserts. Several factors have contributed to this result. In many cases the men remained suspicious that safety activities originated for selfish reasons on the part of the bosses—that such work resulted from a desire to "kid them along," in order to reduce labor turnover and to keep them satisfied. Just when a multitude of workmen began to think that aggressive safety and other welfare work had come to be a permanent part of industrial life—the word "Retrench" sounded in the front offices and echoed throughout the factories. He continues:

"As early as the summer of 1920, safety workers began to be laid off. By autumn, doctors and nurses previously employed for factory safety and first-aid work began to look elsewhere for support. During the late fall and winter advertisements appeared in the newspapers and trade magazines announcing hospital apparatus for sale. Some hospitals in factories were completely disbanded.

"Even the most inexpensive methods of safety work were dropped in many factories—factories able to afford at least a

small appropriation for so vital a thing. The bulletins issued by safety organizations were laid on the shelf instead of being put on the bulletin boards. The worries about wage-cuts, lay-offs and retrenchments were allowed undue prominence, even in factories which maintained a fair amount of business.

"The permanent safety features, like ventilation, lighting, routing and mechanical safeguards remained; but the maintenance in many places became haphazard. Educational work through shop papers was cut off through the suspension of hundreds of such publications.

"It can scarcely be denied that during the last year the crusade for safety has suffered a decline. In some factories the number of accidents has increased alarmingly with the cessation of practically all safety work. And the money retrenched from laying off safety workers has been more than counterbalanced by the added expense resulting from lawsuits, loss of time, breaking in of new help to replace those injured or killed, and loss of morale.

"Safety organizations and many individuals engaged in the crusade for safety have at no time given up the fight. But the decline in the movement has been caused through forces entirely out of their control."

HEALTH OF THOSE WHO HANDLE OUR FOOD

WHAT ASSURANCE HAVE YOU that the cooks who prepare your food and the waiters who handle it are at least in that degree of health that will make the meal a source of strength and life, instead of the opposite? At least one city thinks it proper to require the physical examination of all food handlers; and the plan, which has now been in force about a year, has brought out some interesting, if disquieting, facts. The city in question is Kansas City, Kan., which altho the smaller of the twin towns of that name, is still the metropolis of its State. Dr. L. B. Gloyne, Commissioner of Health, who reports on the results of the new ordinance in *The Journal of the American Medical Association* (Chicago), tells us that in one case the cook and all the waitresses in a restaurant were ordered removed. Presumably they emigrated at once to some other town whose citizens are less particular. Writes Dr. Gloyne:

"To recapitulate, 1,860 persons had been examined up to November 1, 1921, by the Kansas City Health Department, and 249 had been examined by family physicians. In addition to these, 112 persons either left town or quit work as soon as the department started to enforce the ordinance. From the stories that we gathered, the vast majority of those who left town or quit work did so because they felt sure that they could not pass the examination.

"Since November 1, 1921, there have been 762 examinations by the health department, and thirty-four by family physicians. This makes a total of 2,622 examined by our department, and 283 by family physicians. The department has refused permits in 61 cases, while the family physicians have refused none. It is possible that all of the 283 persons examined by private physicians were physically qualified, but none of them had any laboratory test to help the physicians arrive at their conclusions. Our inspector has often encountered persons who, thinking they could not pass the health department's examination, insisted on going to their family physicians.

"I previously recommended that all examinations of food handlers be conducted by the health department. This caused a reaction among a few of the local physicians, some of whom desire to make the examinations because they feel that it is the right of the person examined to choose his physician and, also, because they need the income. These physicians are careful about making their examination. Other physicians do not desire to make the examinations, because they fear that something wrong will be found and that their honest reports will cause their patients to lose employment.

"Our experience is not unique in this matter, because health departments in other cities, where family physicians make these examinations, are having similar experiences.

"I want to refer to a few things that have been accomplished by this ordinance. In one restaurant, all of the waitresses were infected. A baker who had an ulcer required seven months' treatment before he was able to return to his usual occupation. I believe that he worked in a near-by city while under treatment.

"We require all restaurant employers, groccerymen and druggists, if they are soda dispensers, to be examined. From a moral standpoint, I do not believe that the three groups vary widely.

"Of the three groups, grocery employees, restaurant employees and soda dispensers, the restaurant group stands out as most in need of attention. There is more shifting in that group than in any other. Less capital is required than in the other two lines. I have examined a number of persons who were in the restaurant business because they could not find anything else to do. They were entirely void of knowledge on sanitation. I believe that the next advance in improving the sanitation of our restaurants and other food establishments, and for seeing to it that food reaches the consumer in an uncontaminated condition, will be a mental test that will require the food handler to study certain sanitary principles before he tries to pass the physical examination. I have issued cards to a few persons of very low mentality. It was evident that they were not mentally capable of having the responsibility of preparing food for the public. Some of these I have stopt to talk to, and then questioned them after my little lecture. I found that my talk did not make the slightest impression. This group is composed, mainly, of men, beyond sixty or sixty-five, who run some little place of business all by themselves.

"While the examination of a large number of persons gives a somewhat monotonous task to the conscientious examiner, still the results obtained are well worth the amount of effort necessary to carry out the work, and I heartily recommend the adoption of this public health measure in any community in which it is not now applied."

TINKERING WITH PATENT LAWS

PROPOSED AMENDMENTS TO THE PATENT LAWS, and especially one providing that patents shall expire if the products have not been put upon the market in five or six years, are criticized by an editorial writer in *Railway and Locomotive Engineering* (New York). The writer complains that our politicians are not willing to let well enough alone. No sooner, he says, is a meritorious law passed increasing the force of the Patent Office and thereby facilitating the work necessary to the securing of proper protection to our inventors, than a tinkering process begins. He continues:

"In brief, bills are now pending in the form of amendments to the Patent Law proposing to make patents expire in five or six years unless the invention has been placed upon the market within such period. In other words, if the inventor is not a manufacturer and lacks the means to create a market for his article, somebody else who has these qualifications can proceed and probably grow fat on other men's brains.

"This compulsory license system is not new. It has been tried before and failed. It does not lead to the establishment of new industries. It tends to discourage the making and disclosure of invention and retards progress. It is based upon the erroneous assumption that patents cover things for which a market already exists. Some lawmakers seem to forget, or perhaps they do not know, that before the manufacture of a new article can become profitable it must be introduced; probable purchasers must be made acquainted with it, and a demand created. Many clever inventors set out, unfortunately, without financial resources. The difficulty in getting others to risk money on the success of some new contrivance is increased when by ignoring the inventor for a few years they may secure a competitive compulsory license, if and when a demand for the thing arises, without bargaining with the inventor.

"As is well known, some of the most important inventions have been made by men who took many years to place their inventions on the market in a really valuable commercial form, the patent law giving the exclusive right to the inventor for seventeen years has been a help in the marvelous development of many inventions. If the intention of the proposers of the amendment is to compel foreign inventors to come to America and establish new industries, we are not disposed to hinder progress in any form, but the proper encouragement and protection of the people who happen to be in America already are nearer to our minds than those who are more remote, and any profit that we could make by the compulsory introduction of foreign means and methods should not outweigh the paternal duty of looking after our own, or at least giving them a fair chance under such circumstances and conditions as are calculated to give them time to see of what stuff they are made."

RADIO • DEPARTMENT

IS RADIO ONLY A PASSING FAD?

WONDER AT THE VERITABLE EPIDEMIC of interest in the new radio art is pretty sure to be followed whenever radio is being talked about—and it is being talked about wherever people congregate—by the question as to whether this interest will last. The consensus of opinion appears to be that, whereas there will of course be many modifications of present conditions, and doubtless quite unexpected developments, yet the value of radio from the standpoint both of entertainment and substantial public information and education is far too great to permit doubt of the permanency of this new public utility.

Meantime it is of interest to read such a summary of the present status of the art as is given in *Radio Digest Illustrated* (Chicago). One can hardly doubt that a movement which has attained such proportions in so short a time meets a genuine public need:

"Radio which started as a scientific experiment only, recently has become a craze, but now certainly it is rapidly approaching the status of a business, or perhaps a profession.

"Even the experts do not dare estimate the number of receiving stations, altho 600,000 has been hazarded as a fair guess, most of them saying that the output of the manufacturers only is the limit to which receiving stations will go. It is known, however, that there are 18,690 sending stations to-day; this surprising figure was reached on April 15 and includes commercial, ship and amateur stations licensed by the Department of Commerce. Of the total, 15,907 are land stations, of which 678 are commercial, the balance being amateurs and special amateurs.

"There are ten transoceanic companies operating in this country. One hundred and twenty other stations are licensed to operate from city to city, while 36 'PG' stations are licensed to communicate from the coast to ships.

"The number of limited commercial stations commonly called broadcasting stations, which send out radio telephonic entertainment, market and weather reports, reached 182 on April 15, but other applications are on file and the daily mail brings dozens of them. There were only 67 such stations on March 10, showing an increase of nearly $3\frac{1}{2}$ a day. Thirty-two were issued during the past week. Special stations total 534, comprising 213 experimental, 123 technical, mostly colleges, and 198 special amateur stations. There are to-day 15,031 regularly licensed amateurs transmitting, and of course receiving also, all of whom are licensed through their district inspectors in the nine districts into which the country is divided for their convenience.

"American ships to the number of 2,783 are carrying radio and are listed as ship stations; this number is nearly four times the total ships which were licensed before the war, which indicates the growth of radio on the high seas.

"The radio telephone is rapidly coming into ordinary business life:

"Among the 32 new broadcasting stations licensed recently, Los Angeles secured eight, including one license for a laundry and dye works.

"St. Louis opened three stations, one of which is operated by the local Chamber of Commerce; six newspapers took out broadcasting licenses, bringing the total number of daily papers sending news and entertainment to 23.

"Of course there are many radio corporations, electrical

manufacturing equipment companies sending entertainment, but there are also hardware and departmental stores, oil, stone and motor dealers, as well as chambers of commerce, municipalities, churches and colleges."

The Newark *Call*, which has been making a new practical use of the radiophone that is shown in the accompanying illustration, tells as follows of the interest in American broadcasting methods that has been manifested in England, and of the

A NEW PRACTICAL USE OF THE RADIOPHONE.

Reporters of the Newark (N. J.) *Sunday Call* riding about the city and reporting a parade directly to the *Call* office by phone.

British attitude toward what they regard as a quixotic project:

"English analysis of the radio situation in this country is that we have gone 'wireless crazy' and have lost all perspective of the basic economic principle of broadcasting. While admitting that the United States has opened to the world another new development and has done tremendous things with radio in the last half-year, English observers who have come over to this country to make a survey of our achievements insist that the principle along which we have been working is off balance because it is economically unsound.

"Britishers refuse to be taken on flights of fancy by the boundless public utility of broadcasting as a great medium for the dissemination of information and tenaciously cling to the theory that unless a charge for the service as now given can be made at the receiving end the cost of maintaining the service will continue to be a constant and increasing drain upon the transmitting agency with no revenue to offset it.

"In England, the control of radio receiving and transmitting stations, both amateur and commercial, is under the Post Office Department which has hobbled the amateur with such drastic restrictions that the development of the radio science has not been as advanced as on this side.

"The English press, attracted by the wide-spread interest in this country, has carried the awakening message to the British public, and a noticeable stir of radio enthusiasm is the result. However, there has been no broadcasting in England, due largely to the fact that the English interpretation of a broadcasting service is that it should be self-supporting.

"To make broadcasting self-supporting the Britishers believe that one special agency should be licensed to broadcast, and that

through the Post Office Department all receiving stations should be licensed and the receiving apparatus rented at a fixed rate which would insure a sufficient revenue to maintain a high-class program of entertainment from the transmitting station, or a service charge made for the programs furnished."

The situation has been well summarized editorially in *Radio* (San Francisco), which takes the broad view that radio broadcasting is a public utility:

"Many people are raising the question as to who will maintain radiophone broadcasting stations in the future. The answer is

and with a great deal of space between them. This is done for the sake of appearances in the drawing, ease in drafting, and to render 'reading' the diagrams easier. In following such a diagram the wires may be carried at any angle, in curves or around corners and may be placed much closer together than is indicated. If you should examine a ready-made set you would find instruments and wires packed closely together with the wires far from straight and parallel. Indeed, it is an unwise plan to carry wires parallel for any distance, as there is always a tendency to 'induced' currents when this is done. The main points to remember are to cross wires as seldom as possible; to keep them well separated where they cross; to keep them as short as possible; to have them well insulated and to make good connections."

RADIO FROM A RING

INGENIOUS YOUNG AMATEURS continue to vie with one another in the production of midget radio receiving sets. In the Springfield (Mass.) *Republican*, Mr. Avery E. Lord tells of the work of a New Jersey boy whose latest product is made in the form of a ring to be worn on the finger. It is of course to be understood that diminutive sets such as this use a crystal detector, and therefore can not be expected as a rule to bring messages from stations more than fifteen or twenty miles away, with occasional extension by five or ten miles under exceptionally favorable circumstances. But there is perennial interest in the fact that so tiny a mechanism can be made to interpret any radio messages whatsoever, even with the aid of an aerial.

Here is Mr. Lord's account of the ring receiver:

found in the recommendation of the Washington Radio Conference 'that radio communication is a public utility,' and in the fact that definite bands of wave-lengths have been set aside for broadcasting from government stations and public institutions. The broadcasting of information of all kinds will soon become as much of a public necessity as are good roads. The inaugural address of the next President of the United States will undoubtedly be heard by the people of the country by radiophone. The Borough of Queens, New York City, is considering the installation of a municipal station. On every hand there are signs to show that the broadcasting of the future will be conducted as a governmental function, or at least as a governmentally regulated monopoly."

RADIO SYMBOLS

IN THE PRESENTATION of radio circuit diagrams, or "hookups," certain symbols are universally employed that make it unnecessary to cumber the drawing with descriptive words or even letters. But of course if one has not learned the import of the symbols, the drawings are unintelligible. For the benefit of readers whose interest in radio is of recent origin (some of whom have written to ask fuller interpretation of diagrams hitherto published), we present here a group of the symbols commonly employed, excerpted from *Popular Radio* (New York), regarding which Mr. A. Hyatt Verrill made this explicative comment:

"The symbols used in radio are comparatively few and are shown in the accompanying illustration.

"Do not, however, make the mistake that was made by an amateur who, seeing the symbols representing the primary and secondary coils of an inductance coil drawn side by side, constructed his coil in that way and wondered why his set would not work!

"Inductances are represented side by side in the diagrams merely to avoid confusion of lines, and the two windings should invariably be placed one over the other.

"Also, bear in mind that diagrams of wiring are always shown with the wires running straight, parallel and with square corners.

"A radio receiving set so efficient that it can receive music, speeches or spark messages as well as many large-sized sets, altho it is built in the form of a ring and is no larger than many of the little finger rings now affected by many persons, is what Alfred G. Rinehart, 19, of 527 Morris avenue, Elizabeth, N. J., claims for a set which he has just completed. At a demonstration given at his home recently, Mr. Rinehart's claims seemed to be justified, for F. Reed Camponilliez, at WJZ, was clearly heard singing from the 'Messiah,' and not a word or a note of the accompaniment was missed. The tiny set took the words and music from the air and gave them out through the phones as loudly and as clearly as an ordinary telephone message under good conditions.

"The entire set, outside of the slender coil, slightly more than an eighth of an inch in diameter, which is smoothly covered with sealing wax and encircles the finger, measures but 1 by $\frac{5}{8}$ by 7-16 inches. These measurements include the brightly polished bakelite panel on which are mounted a diminutive crystal detector of the 'cat-whisker' type, and a small switch control which is connected with the coil by nine taps, and which permits as many different tuning adjustments by means of a movable hand which makes connections with any one of nine tiny brass studs neatly arranged in the form of a semicircle.

"The ring set seems to eliminate interference to a remarkable degree, and concerts or code messages can be received over it without any difficulty due to imperfectly heard passages under normal conditions. With the inner coil-traps, a wide range of tuning is possible. During the test, WJZ at Newark could be tuned out completely, without a trace of it being heard, and a code message which was being transmitted, picked up, merely by moving the switch control on the ring over one point.

"Although the inventor of this ring set recently built a 'Domino Midget' set measuring only $1\frac{1}{2}$ by 1 by $\frac{5}{8}$ inches, he has used an entirely different hookup for his ring set. With this miniature receiving apparatus he can receive messages transmitted on wave lengths up to and including 550 meters.

"To emphasize the efficiency of his tiny set, the inventor disconnected it from his two-strand, 75-foot aerial and water-pipe ground and went outdoors, connecting the set to the metal stem of an ordinary umbrella for an aerial, and using a screw-driver stuck into the earth for a ground. With this outfit the listeners heard numbers sent out by WJZ, faintly, but loud enough to distinguish the tunes and hear the operator signing off."

A SIMPLE VARIOMETER RECEIVING SET

MUCH OF THE COMPLAINT about interference that comes from novices in radio receiving is due to the use of tuning devices that are not sufficiently sensitive. In the usage of the experienced amateur, the type of tuning coil known as a variometer has pretty generally taken the place of the single-tapped induction coil and the familiar loose coupler. A tapped coil serves very well where it is not necessary to distinguish too closely between wave systems; but may prove inadequate when really nice discrimination is in question. The variometer, consisting essentially of two coils, one of which rotates on its axis within the hollow of the other, permits the most infinitesimal gradation of adjustments. In one position, the two magnetic fields coalesce and mutually strengthen each other; as the inner coil is rotated, the mutual relations of the magnetic fields are indefinitely modified, and at 180 degrees they are fully opposed. The inductance of the antenna system is thus shifted from minimum to maximum, tuning for waves of all available lengths, by merely turning the knob attached to the axis of the "rotor" coil.

Some of the most elaborate radio receiving outfits on the market use this system. One that has three stages of audio-frequency amplification has carried automatic control of rheostats and condensers to such a stage that nothing whatever is required of the operator who would "listen in" but to turn the pointer on a single dial, thus operating the variometer, guided solely by results. You have merely to turn the pointer until the sound you wish to hear is loudest and clearest—and then sit back and listen. Once the pointer is adjusted, it may be left there, and if you wish to listen to the same station on another evening, all that is necessary is to push a button, just as you turn on an ordinary electric light.

An article by Mr. William F. Crosby, in *The Modulator* (New York), tells how to make a very simple set with variometer for tuner. Here is the description:

"By referring to the accompanying diagram it will be seen that this set is about as simple as it is possible to make a set that will really work well. The set consists primarily of a good make of crystal detector, a variometer and a small variable or fixt condenser. The phones and the wire for the aerial will also have to be purchased.

"It is best to buy the variometer, altho it is not much of a job to make one from two cardboard tubes. One of these tubes will have to be small enough so that it may be turned all the way around inside the larger one. The large one will have to be about three and a half or four inches in diameter and about two and a half inches long. These two cardboard tubes should be given a couple of coats of shellac and then wound with about 40 turns of No. 24 cotton covered wire. A shaft will have to be run through the center of these tubes in such a way that the large tube is stationary and the small one turns. It will simplify matters if, when winding

the wire, a space of about a quarter of an inch is left in the middle of each of the tubes to allow the insertion of this shaft. The shaft should be made of brass and it may be left long enough so that a knob of some sort can be fastened on the outer end.

"This variometer will not be quite as good as the ones purchased in the radio stores, because the windings will have a greater degree of separation, but it will work good enough for a set that is only going to be used for a short-distance reception.

"The variable condenser had better be purchased, as this is

very difficult to make. A small fixt condenser may also be used in this place, but the variable condenser will give the best results, as it allows the operator to tune the set better. Another small fixt condenser should be connected across the receivers.

"After the parts are all together, wire them up as shown in Fig. 1. The whole set may be mounted in a small cabinet if the maker so desires. All connections should be soldered and ordinary No. 18 bell wire will do for wiring."

MORE AND MORE INDOOR AERIALS

REPORTS CONTINUE TO COME from Washington of experiments by the Bureau of Standard experts with various types of loop aerials. We learn of one aerial only nine inches across, and another about six feet; both of them said to be capable of intercepting messages from across the ocean. At this season in particular the loop aerial makes appeal because of its virtual elimination of "static." And it is not the government experts alone who are experimenting. Many amateurs in all parts of the country are testing the loop in one form or another. The *New York Globe* tells of apparently successful experiments to extend the application of the indoor aerial to the receiving outfit using only a crystal detector. Needless to say, the Bureau of Standards experiments, and those of most amateurs, have been made with vacuum tube (triode) detectors. Indeed, it has been accepted almost as axiomatic that it is necessary to employ amplifying tubes (usually involving several stages of radio frequency), to make amends for the relative insensitiveness of the loop. But this necessity does not seem to apply to the form of loop used by the experimenters to whom *The Globe* refers:

"Amateurs of Elizabeth, N. J., which is a hotbed of radio activity, are frankly skeptical of the experts' repeated statements that indoor aerials won't work with crystal sets.

"Martin J. Corcoran, principal of the Boys' Vocational School, and one of Elizabeth's foremost radio experimenters, is one of them. Mr. Corcoran, after trying out both kinds, announces himself as in favor of the indoor variety for crystal as well as bulb sets. He states that his conclusion is based on his own experiments and trials made in Elizabeth by his pupils.

"He explains that indoor aerials are found to be far superior to outside ones in cases where conditions are not ideal for the outdoor antennæ, where long straightaway stretches of wire can not be erected or where tin roofs or other objects which lessen an outside aerial's efficiency can not be avoided.

"Mr. Corcoran reports that in his own case, a continuous wire, 144 feet long, strung in four lengths in his attic, with one end leading to his set, gives him better results than he obtained with a 200-foot outside aerial. He states that he finds the efficiency of the indoor aerial is increased by running a loop from the free end to the section of wire leading from his receiving set."

NINE-INCH COIL HEARS EUROPE.

This coil antenna, made at the Bureau of Standards, at Washington, is but nine inches square, yet when hooked up with extremely delicate receiving apparatus will detect radio signals from Europe.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

HOW ART HAS GONE TO THE DOGS

DESPAIRING OF ART in general, as one critic does, there may not be much credit in claiming that American painting leads the world. "Art has gone to the dogs," declares Mr. Henry M'Bride of the *New York Herald*; "that is to say, it is no longer a living force in the world." To set this over against the declaration of Mr. Homer Saint-Gaudens in *Arts and Decoration* (May) that "America is producing the finest art in the world to-day," is to be encouraging counsels of despair. But Mr. Saint-Gaudens with commendable optimism thinks it a

"The attitude of our own museums, the fact that foreign painters send us poor pictures, the fact that they charge too much, and the fact that in these days our own painters are better. The more inexperienced men abroad still believe that inferior works of art made in Europe are acceptable to us because they bear the foreign brand. . . .

"Furthermore, the purchase of foreign works of art made by so many of our wealthy men have often been unhappy ones of late, and those in a position to guide them have not hesitated to tell them that they have frequently been swindled by unscrupulous dealers who have induced these rich dilettante to buy as fine works of art, second-rate canvases by first-rate names. . . .

"One cause of the falling off of our foreign purchases is that the Europeans cheerfully raise their prices in this country from one-half more to double what they expect abroad. This caused little difference during the period when foreign money was so badly depreciated. But as the exchange returns to normal, the bargains will grow less tempting, and the resentment on the part of our public at this extortion becomes more forcible.

"The last reason that the modern canvases from across the water have failed invariably to find a home with us, is the simplest one of all. Our paintings are better."

Turning to Mr. Cortissoz's notice of the Pittsburgh show in the *New York Tribune*, we see how his view confirms Mr. Saint-Gaudens's. First of the French section:

"There is a curious want of freshness about the French show. The modernists are on the wrong track, but their discontent with the conservatives is understandable. The very virtues of the Salon grow a bit depressing when they subside into routine. There are one or two singularly clear demonstrations of this in the exhibition. The names of Aman-Jean and Jacques Blanche used

to be synonymous with progressive ideas. They had originality. They had charm. Now they paint what we can only describe as pot-boilers. They and other Frenchmen, artists like Desvallieres, Cottet, Simon and Prinnet, have all the easy sophistication in the world, producing unimpeachably well-made pictures; but there is not a spark of inspiration left in their work. They have trusted too long to an excellent formula. Excellent as it is, it can not function by itself; it needs the animating fire of a purely personal force. Fortunately this is forthcoming in a few instances."

In the English section, as in the French, we read, there is a single picture which sets one to thinking about a school.

"It is a canvas with a portentous title, 'Sowing the Seeds of the Irish Free State.' Sir Williams Orpen painted it. Merely to state that fact is to indicate an affirmation of what is most

misfortune that "we do not know how great is our present lead over Europe." He found it out, he says, when he went abroad "to collect the foreign contingent of the annual Pittsburgh International Exhibition" now showing—the show, in fact, that drew pessimism from Mr. M'Bride. But we will attend first to Mr. Saint-Gaudens. He got a hint first from the French painter, Mr. Lueien Simon, who confided to him that he "was not proud of French art." While Mr. Saint-Gaudens does not say that he is forced to bring back inferior canvases of distinguished foreign painters, he does say that foreign artists are not eager to send their pictures here first, because they resent the jury system which may humiliate a great name by rejecting his picture. Then they complain that we do not buy their pictures; and this oversight of ours springs from several causes. Such as:

significant in British art at the moment. Orpen is one of the outstanding types of his time, as admired a leader as Augustus John. There is something in this picture to explain why. The nude young woman dominating the design is capitally drawn. So is the charming colleen on the right. So is the lugubrious gentleman beside her. But that is all. As an excursion into allegory the painting completely fails to carry conviction. There is nothing imaginative about it. It is merely a strange sort of poster. In its want of glamor it is characteristic. There are several other canvases here which have an imaginative aim. There are religious compositions by Maurice Grieffenhagen and Robert Auning Bell; there is a picture of Noah and his family by Mr. Leon Underwood, 'After the Flood,' an essay in the manner of the Italian Primitives which is not without merit. But these things seem the works of illustrators rather than painters and to be compositions put together by main strength rather than out of genuine imaginative fervor."

Mr. Cortissoz disclaims "patriotic prejudice in saying that the American section rather overshadows its neighbors."

"A distinguished Englishman or Frenchman would be compelled to admit that our school is the most progressive of the three. It is weak as the others are weak, in imaginative design. There are few contributors of pictures removed in subject from the everyday prose of life. But those few, as it happens, have value. We feel the sense of beauty operating in a really charming manner in Dewing's 'Dance' and in Brush's 'Modern Madonna.' Its gracious effect is visible again in the somewhat confusing but still impressive picture of 'The Expulsion,' by Mr. E. F. Savage. Tho this painter has devised too artificial a background for his figures, the latter are conceived with originality and are beautifully drawn. Mr. Blashfield is heroically monumental in his 'Angel with the Flaming Sword.' Decidedly these episodes have a serious interest. It is possible, also, to set against the brilliantly academic treatment of the nude in 'A Model,' by Mr. Leopold Seyffert, the even more brilliant individuality of Mr. Arthur B. Davies in his 'Nevada.' Still, it is in manual dexterity that the American exhibition is richest—in manual dexterity doubled with a freshness, a vigor, giving this section a tremendous advantage over the British or the French."

Knowing Mr. M'Bride for his staunch defense of the moderns, we are prepared, perhaps, for his despair. The Show "lacks ideas" said a Pittsburgh reporter, and Mr. M'Bride echoes:

"So it does. It lacks ideas. In all the length of the galleries there is no single work that speaks to you straight from the heart in the accents employed by the man, say, who attacks the Volstead Act, or that other, even more eloquent, who describes to you how Babe Ruth hit a home-run, or how Charlie Chaplin makes his first entrance in 'The Kid.'

"This is no entertainment that sells the house out without advertising. On the contrary, all the blandishments known to expensive publicity agents are required to inveigle the poor Pittsburghers away from that rival attraction across the lots, the ball game, and into the granite inclosures of the Institute. . . .

"What's the trouble? Has art gone to the dogs? I'll say it has. It once had a proud estate. Kings intrigued for the Benvenuto's and Leonardos and the deepest minds were swayed by Michelangelo's performances. The deepest minds to this day are still swayed by him. But what spiritual provocation or support are President Harding or Mr. Henry Ford to obtain from the Carnegie Institute exhibition? They prefer the comic supplements of the Sunday newspapers, and altho I hold no brief for the comic supplements, I hesitate to condemn these distinguished citizens.

"Art has gone to the dogs. That is to say, it is no longer a living force in the world. It has been relegated to the second, or perhaps third, plane. It can not compete with the movies as an educational factor, nor with baseball or motoring or musical comedy as a source of entertainment. . . .

"Is this final? Who can tell? Certainly the situation is not helped in any way by mincing the facts. It may be that painting and sculpture are to dwindle and fade away into lost arts. The world is an old institution and a very indifferent one. With the greatest conceit imaginable, man finds it difficult to believe that nature takes his little affairs seriously. But little as we know about nature, we small creatures have already accumulated a vast amount of data about ourselves. So, altho painting and sculpture may go altogether into limbo, along with the dimly remembered handcraftsmen of our forefathers, the aspiration for expression and the will to believe in the eternal mysteries will continue."

OUR LITERARY "BACK-SCRATCHING"

THE TIDE OF PERSONAL JOURNALISM is running so high that it begins to attract defenders. When a casual contributor to the correspondence columns of the newspapers wrote in to say he didn't agree with the edicts of the literary gentry who have overcome the old-time habits of anonymity, he used an irritating word about their judgments. "Back-scratching" is what he called their activities—not a new

BY AN ADMIRER LEADER OF THE BRITISH SCHOOL.

Augustus E. John, lately inducted into the Royal Academy, sends this portrait of a "Canadian Soldier" to the Pittsburgh Exhibition.

word, indeed, nor representing a new occupation, but one that seems to fit the present. The younger men write so much about each other that a large public must enjoy the game. In the New York *Tribune* two men take up its defense from different angles. Mr. James L. Ford has probably seen so many back-scratching eras that he can not "view with alarm" the present resurgence, for he has found it to be the best way of killing mediocre talent. Mr. Percy Hammond is so generous as not to see it at all and culls from the May *Bookman* his weapons of defense:

"What I intended to prove quite a while ago was that this suspected conspiracy of literary masseurs may be, more or less, a superstition. Frank may jolly Alec, in print, about the rainbow dreams in his brilliant scarf. Mr. Farrar, of *The Bookman*, and Mr. Weaver, of *The Brooklyn Eagle*, may waft their infant kisses to such lips as are commendable. John Peter Toohey may whisper loudly to the world that Mr. Brown, like the Thousand and One Nights, is sole and unparalleled, and F. P. A. may acclaim with enthusiasm the qualities of Christopher Morley. Alan Dale may doff his plumed hat to J. Ranken Towse, and Miss Laurette Taylor (who is literary as well as histrionic) may in her published thoughts express such adoration for Robert Benchley, of *Life*, as Mr. Benchley has expressed for her. But none of them does these nice things with the expectation of subsequent emolument.

"In the current *Bookman*, for instance, you can get an idea of how honestly the writers speak of one another, and of how little they care for the fable of the bread that was cast upon the waters.

The May *Bookman's* contributors at least are not addicted to the oily embrocations of mutual advertising. Here, for example, are a few of the things they say about their fellow artists:

"Hugh Walpole: 'H. L. Mencken is set tight in his own opinions, like a toad in its hole.'

"An anonymous critic: 'Joseph Hergesheimer is a most frightful liar. He bathes and basks in flattery. He has assignations with adjectives, love affairs with nouns and capricious liaisons with adverbs and prepositions.'

"Kenneth Andrews: 'Shaw's "Back to Methuselah" is a preposterous affront to his faithful followers. . . . A colossal failure.'

"Ditto: '"The First Fifty Years" grows toward the end a bit synthetic.'

"Ditto: 'The dialogue of Eugene O'Neill's "The Hairy Ape" is clumsy, redundant and painfully rhetorical.'

"Edward E. Paramore, jr.: 'H. L. Mencken is a hardened Germanophile. His gods are Bach, Beethoven, Brahms, Frederick the Great, Nietzsche, Goethe, Ludendorff, Wagner, Plato, Shakespeare and George Washington.'

"Ditto: 'George Jean Nathan's critical estimates are much like Mencken's. He is a man bored, skeptical and blasé about almost everybody but Bach, Beethoven, Shakespeare, Goethe, Frederick the Great and Sappho, and he hates a good deed shining in a naughty world.'

"Ditto: 'Heywood Brown reveals a meagerness of cultural equipment incredible.' . . .

"Ditto: 'Gilbert Seldes (of the *Dial*) is the victim of an acute occupational disease. A terrific strain has been put upon his sanity by prolonged contact with the cuckoo manuscripts in the *Dial* offices.'

"Burton Rascoe: 'In Claude Washburn, the author of "The Lonely Warrior," I can not discover the slightest gift for writing.'

"Ditto: 'The charm of Fitzgerald's "This Side of Paradise" was precise in its puerilities. The "Beautiful and Damned" is blubberingly sentimental.'

"Thus in the May issue of *The Bookman* armor on armor shines and trumpet to trumpet speaks, in no obligato to back-scratching. The litterati are shown here to loathe the caressing gestures of the courtier and to be good at wielding the bruising irons in the strife and carnage of New York's feuilleton, essay and fiction circles."

If this doesn't prove the innocence of the condemned journalists, Mr. Hammond prepares another brief. You may take him for a gentle ironist if you like:

"Further evidence is at hand absolving our young writers and artists from the charge that they practise the voluptuous habit of back-scratching. Here, for instance, is the case of the Algonquin coterie, considered by many persons to be the most pernicious of the addicts languishing, more than others, it is said, in the enervating amours of mutual admiration.

"Alarmed observers of less wanton minds have regarded the Algonquin bund as constituting a bourse wherein there is daily traffic and exchange in published puffs, 'notices,' compliments and extollations. Both suspicions are calumnious. Responsive, perhaps, 'each to other's note,' while manguering at noontime, they may be depended upon to be avowed and erect in composing for publication, and to sacrifice the feelings of their brethren to their honest sense of Duty. Franklin P. Adams would sheathe, forever, his smiling stylus ere he would permit it to pen a venal flattery; and no printed page can brag that it has been sullied by lying words from David Wallace or John Peter Toohey, the Algonquin press agents de luxe. The Pembertons, Brock and Murdock, the Kaufmans, Beatrice and George, Kecey Allen, Burton Rascoe, Donald Ogden Stuart, Carl Van Vechten, Newton Fuessle and others in this friendly syndicate worship intimately. But when at a distance from the shrine they grow agnostic and sincere."

Mr. Ford, in another issue, culls from history and experience to prove that the game carries its own corrective. He refers to the old days, when literary wares were to be sold only to the *Century*, *Atlantic*, *Harper's*, *The Ledger* and *Frank Leslie's*:

"The backs most assiduously scratched then were those of the buyers of manuscript, and the practise is so ancient that I used to wonder if the hieroglyphics on the obelisk in Central Park, which learned Egyptologists were then trying to decipher, might not prove to be encomiums of the buyers of the rolls of papyrus on which ancient scribes were wont to grave their comment

and chronicle. Be this as it may, the magazines of the early '80's, as well as the out-of-town papers, for which so many of us wrote, were enriched with evidences of back-scratching embodied in such articles as 'Homes and Haunts of Noted Writers,' 'World Famous Editors Seen at Close Range,' and 'Boston, the Literary Center,' every one of which dealt exclusively with contemporary purchasers of manuscript.

"But there was no back-scratching for the writers, save for the few who died leaving manuscript in the safe of some magazine. . . .

"Back-scratching was one-sided in those simpler days and purely commercial; to-day it is reciprocal, and so far as I can see not designed to further the sale of manuscript. Neither then nor now can it be said to influence public opinion, for some of the most assiduously puffed books have died on the book-sellers' shelves. But in its effect on those writers whose vanity it tickles it is by no means the harmless indoor sport it appears, for the fame it creates is meretricious and so thin that it wears off in an incredibly short time. Moreover, the sort of publicity it provokes is a dangerous narcotic, the taste for which grows with indulgence, and the unfortunates who yield to it are no more to be envied than are those who are tormented by a craving for soul-destroying drugs. Let the practise grow in extent and the profession of letters will have its registered addicts limited by law to a moderate daily dose of the enervating narcotic. . . .

"I do envy them, however, for their pleasant, care-free lives. Lunching here and dining there, chatting with this one, dropping in on the other and chatting with the third, and forever gleaning scraps of genial personal information, their days and nights flow on like an untroubled dream. Their unexampled facilities for meeting and amiably scratching the backs of all classes of persons, including even a few I have heard of, must lead in time to an urban acquaintance wider than anything my philosophy has yet dreamt of.

"Log-rolling is undoubtedly an agreeable calling, tho a futile one, for it leaves those who follow it no time for real work, and I have noticed that the most assiduous rollers make but little headway in the profession they claim as theirs."

ENGLAND DESPERATE OVER LOST ART—Australia buying Vandyeks! And why not? England is more complacently impoverished to make the Empire richer. But when America comes into the market the loss is irrecoverable, and a King's son-in-law takes a hand in stemming the tide. The *Westminster Gazette* presents anew the painful situation:

"The argument of selfishness does not apply. It is true that many of the treasures of our private galleries have been acquired after Continental wars, when the length of British purses has beaten off all competition. The plea might run that just as we purchased the work of the great masters of Italy, Holland, Belgium, and Spain, just as we acquired some of the richest treasures of Greek art, so others, now more wealthy than ourselves, are levying their toll upon what is the common possession of mankind. We can not make a corner for ourselves in foreign art. But we are losing also the finest works of the British school, the landmarks of British genius in painting. The time might conceivably come when a pilgrimage to the United States would be a necessary preliminary to understanding how great have been the achievements of British art. . . .

"We can, therefore, extend sympathy to Viscount Lascelles when, in the week of the Burdett-Coutts sale, he suggests that 'some advantage should be allowed to the private owner of great works of art who has sufficient generosity to show them on occasion to the public.' In the main it is the pressure of death duties which brings valuable art to the hammer. Some relief in that direction was wisely afforded by Sir Michael Hicks-Beach for pictures of which the owner is not competent to dispose—which are heirlooms, in fact—but this has proved effective in only a slight degree. Too often the pictures or other works of art provide by sale the readiest means of meeting the demand of the tax-collector. It might well be considered whether some further protection should not be given. A provision that objects of historic value should not be subject to duty on passing at death, but should on being sold pay all the duty they had hitherto escaped, would probably enable the nation to acquire on the easiest terms whatever was thought proper to include in national collections. The State would purchase by means of the death duties accrued to it."

THE RECONQUERING GERMAN MUSIC

GERMAN MUSIC HAS REESTABLISHED ITSELF in London with less effort and heart-burning than it has with us. The past concert season has seen Strauss and Elena Gerhardt there as with us; and from newspaper accounts their audiences were larger, tho the German-speaking contingent in that city is small. "There were enthusiasts at one time who were sure that after the war there would be a new heaven and a new earth in music as in other things," says Mr. Ernest Newman in the *Manchester Guardian*, "that while French and Russian music had at last been discovered, German music had at last been found out, and now there would be an end of the swindle." Mr. Newman, who was always a devotee of German music, implies that he, at least, never fell into this benighted frame of mind, and now can smile at those who did. For he says:

"These good people have probably wakened up again by now. The war has no more altered musical human nature than it has altered human nature in general. The enthusiasts reckoned without the plain man. This simple person cares nothing for theories, especially theories of esthetics; he just likes what he likes, and, unlike one or two of my journalistic friends, can not, with the best will in the world, persuade himself that he likes a thing when in his heart of hearts he knows he doesn't. He is now being sneered at as a 'pro-German' in music (it is strange what a high survival-value words have even when all the meaning they once might have had has gone out of them).

"German music has, indeed, emphatically 'come back,' as the boxers say, during the last three years. For this the anti-German enthusiasts themselves are partly responsible. They had no discrimination in their own admirations, no discretion in their propaganda. Almost any music, to some of these people, was good music so long as it was not German. The shoddiest Russian and French music was boomed as vociferously as the best of it, and the plain man, not being the fool he was supposed to be, soon saw the difference, and saw how fallible was the sense of direction of his self-appointed guides. And all the while his own natural desire for a good time was asserting itself. He asked for nothing but the best of everything. There was a dim instinct within him that he had not had it during the war. The moment the chance of it came his way he fell to it, as our American friends say. Hence the scenes one witnessed at the return of Kreisler and at the first reappearance of Chaliapine. Hence also the enthusiastic greeting that Elena Gerhardt has had.

"Her second recital, like her first, reminded us of the old days, with the audience crowding round the platform for encores at the finish, and refusing to leave until a delicate hint had been given them, by the turning out of most of the lights, that it was time for virtuous citizens to go home and give a tired artist a chance to rest. All talk about the public returning blindly to its pre-war adoration of German music is beside the mark. It hangs on Miss Gerhardt's lips because it knows that her art is the supreme thing in its particular line. The public is decidedly critical of German music in these days. The old uncritical worship has gone; great names are no longer hypnotic:

Miss Gerhardt's art, we are told, "is like the German music from which it derives; it has the virtues and the failings of an aristocracy, as Chaliapine's, like Russian music, has the virtues and the failings of a democracy—in the one case a super-refinement and super-subtlety that some day or other must break down; in the other a homeliness that is not free from roughness and now and then becomes plebeian." In fact—

"After an evening of Miss Gerhardt we feel that some of the singing of the best of the Russian singers is merely the art of inspired ragamuffins. The impression comes in part from the more primitive quality of much of the Russian verse and song: it is admirably vigorous and direct, but it would sometimes, one can not help feeling, be all the better for a good washing and airing; the contact with the soil is too close and too obvious to eye and nose; the folk-clothes have been worn a little too long next the skin; and some of this art sweats vodka at every pore. It will be retorted that German song is not wholly free from evidence of association with German beer; and indeed the worst

"WELL MADE" BUT "UNINSPIRED."

Virtues common to all the French pictures in the Pittsburgh show. The one we use for illustration by Henri Lebasque is called "The Banks of the Seine, Andelys."

specimens of German tearfulness are obviously the product of German beerfulness. But all the crude and popular elements in this art have, in the best examples of it, been refined by a long process of evolution. It is this sense of being in the company of an aristocratic art that has taken centuries to grow to its present slightly artificial perfection that is the secret of our delight in Miss Gerhardt's singing. Chaliapine often moves us by a humanism that is hardly a step removed from naturalism. Miss Gerhardt's art is the fine flower of style and breeding, as remote from naturalism, as eloquent of the highest sophistication of culture, as is the style of Anatole France. This impression is deepened for us now by her habit of taking most of her songs more slowly than of old; the very deliberation given us time to be conscious of the complete self-possession of her art, its consummate drawing-out of all the delicate threads of it.

"Art so perfect as this, whether creative or interpretative, implies the ending of a long line of evolution, and therefore the prelude to a decline. Nature cannot go on indefinitely piling a Schumann on a Schubert, a Brahms on a Schumann, and a Wolf on a Brahms. All over Europe to-day it is clear that the old musical régime has broken down. None of the new politics is as yet stable, but there is any amount of vigorous experiment in reconstitution. We have to be tolerant with these experiments. We know that few of them can hope to survive their own day; but out of them will come, in the fullness of time, the work of genius we are all waiting for. It is in this philosophical mood that we listened the other evening to the playing of the new string quartet of Malipiero—'Rispetti e Strambotti'—by the accomplished Lener Quartet. Both the old technique and the old ideals of string quartet writing are here discarded. It is young art, and has all the crudity, the self-assertiveness, the limit of intelligence, and the occasional charm that we expect from youth when it sets out to rebuild the cosmos."

RELIGION-AND-SOCIAL-SERVICE

A TRAGEDY OF MODERN MISSIONS

MARTYRDOM IN FAR SZE-CHUAN, when he had all but planted an outpost of the Cross in Lhasa, the Forbidden City, was the earthly lot of Dr. Albert Leroy Shelton, a medical missionary, whose death has been widely reported in the press. He was killed by bandits while on his way to Lhasa at the invitation of the Dalai-lama himself. It was an end which was not unexpected, and once, when a friend asked him if he were never afraid on his long, lonely trips, he replied: "I am scared to death most of the time." Then he

"Shelton went to Batang, on the Tibetan border, to do everything that would open the 'Great Closed Land' to God. As he realized that one of the most important requirements was a group of well-trained, consecrated colleagues, he selected the best men he could find to work with him at Batang and devoted much attention to plans for a station where the work should be well balanced. Early he realized the need of school work and industrial work, as well as the medical work, but the center of the whole was the evangelistic work. He insisted that everything that they did should have as its ultimate end to bring men to Jesus Christ.

"Shelton was a great physician and surgeon. The hospital at Batang will always stand as a monument, even as a piece of architecture built in the face of most trying conditions. In this hospital he and his associates treated with great skill the Chinese and Tibetans who came, and won a wide reputation. . . . After the operations were over he would gather about him the priests and lamas and discuss their Buddhist lore, with which he was familiar. If he was with a robber band around their camp-fire at night in one of the great mountain fastnesses, he would condemn their practise and then tell them the simple story of the sinless One who wanted to be their Saviour. Some of these robbers so much admired the strong missionary that they wanted to be a brother to him, and one of them said: 'Why not you and I be brothers?' Shelton replied: 'You kill people; you rob; you drink whisky and do many other things that are against our religion. How can we be brothers?' The man was angry, and said, 'Well, what will your religion allow you to do?' Shelton replied: 'The teachings of Christ.' Later this man brought a document to Shelton, which read: 'In view of the fact that General Lozong (as he calls himself) and Dr. Shelton have taken an oath that they will not kill, that they will not drink whisky, etc., and they have decided to be brothers. . . . Furthermore,

this is to give notice that if any of you ever molest Dr. Shelton, I will bring a thousand men to wipe you off the face of the earth.' A year and a half later Lozong wrote, 'This is to inform you that I am strictly keeping my oath of a year and a half ago.'"

Dr. Shelton used every talent for God. As a marksman, we are told, few men could surpass him, and one day he dispelled the Tibetans' superstition that their charm boxes would protect them, by tying one to a goat and shooting the animal dead with an old Tibetan firearm. He had, too, a sense of humor, and so—

"He endured trials as only a man of faith and a man of humor can endure them. For seventy-two days on his last journey home he was held for ransom by Yangtienfu, a bandit general in Western China. He so won the hearts of the members of this band that they offered him \$12,000 a year to stay with them and be their chaplain. . . .

"Through the ministrations of a prominent lama he secured the consent of the Dalai-lama himself to go to Lhasa, and he put his heart, his soul, his all in that trip. He was killed by bandits as he was starting on that lonely pilgrimage. His martyr death is a challenge to the whole Church to go to Lhasa with the Gospel of God's love. Shelton's own words will forever challenge young men: 'Let no young man think that it is a mistake to bury his particularly fine abilities in mission work in Asia; for it requires in the service of the Kingdom of God just as high an order of intelligence, just as great concentration, just as fine tact, and just as much "punch" as are required to run any great business concern.'"

A HERO WHO WAS "SCARED TO DEATH MOST OF THE TIME."

But Dr. Albert Leroy Shelton added, "anybody who follows the will of God will be scared because of the new paths they have to travel," and he never faltered on his own.

smiled, and added: "But anybody who follows the will of God will be scared because of the new paths they have to travel." Yet, we are told, the story of his evangelism and of his operations performed in the open field or in some dirty lamasery will forever be a part of the romance of modern missions. He acted as doctor and as peacemaker, not only in time of war, which occurred frequently between the Chinese and Tibetans, but among robber bands in time of peace. He condemned brigandage, but went to serve the brigands in order that he might impress upon them the spirit and message of Christ.

If ever a man took his environment, heredity and training and gave it all to God, writes Dr. Abram E. Cory in *The Missionary Review of the World*, that man was Dr. Shelton. Born in Indianapolis on June 9, 1875, he moved with his family, when five years old, to Kansas, where he "drove oxen, killed rattlesnakes, gophers, ground squirrels, skunks, coyotes and jackrabbits." When twenty, he went to Emporia to continue his education, arriving in the city with \$9.25, which he wrote, lasted him for eight years. It was in 1903 that he was appointed by the Foreign Christian Missionary Society a missionary to China, and when Mrs. Susie Rijnhart came home with her thrilling story of the death of her baby and the disappearance of her husband in Tibet, Dr. and Mrs. Shelton were asked to take up the work in Eastern Tibet, the land of the roof of the world. So—

COLLEGE LACK OF RELIGION

WHAT THE COLLEGES NEED is what all the world needs—religion, say two writers who agree that American institutions of learning, as a class, are pretty well lacking in what should be the mainspring of their teaching. “If the colleges are to retain their importance,” says E. S. Martin in *Harper’s Magazine*, “they must be able to impart . . . spiritual leading to minds that are fit to receive it. If they don’t, they fail in their most vital office, in the use that most of them were originally founded to serve. If they fail in that, they lose their leadership, which will go to men of faith, as it always does.” “An Instructor,” who writes under this nom de plume in *Scribner’s Magazine*, agrees whole-heartedly with Mr. Martin that the colleges need religion, a fact which, he points out, is only too generally disregarded. Not only is there a manifest lack of interest in the subject of religion on the part of the individual members of the faculty, he states, “but in some of our colleges a single course even, in the history or literature or philosophy of the Bible, in recent years, has been omitted.” He discounts the idea that instruction in Christian philosophy and ethics should be discarded because it offers a fertile field of controversy, since to carry the argument to its logical conclusion “would afford sufficient reason for omitting instruction in every other field.” So, holding that American colleges were originally started as Christian institutions, the writer insists:

“The time has come for them to reaffirm their faith. A definite stand for or against Christianity must be elected. No negative or neutral position will suffice. For so surely as any college attempts to occupy middle ground, just as inevitably will positive anti-Christian teaching and ideals creep in. If you doubt this, look around you.

“The great void in the world is the lack of standards: standards in business, in politics, in international relations—in fact, in every walk and avocation of life. Nowhere is this truth more manifest than in our colleges. What standards exist in educational theory, in teaching, in research, in scholarship, in advancement of professors, save the most artificial and superficial? Above all else, where are the standards of lofty moral ideals and leadership to which the colleges throughout their departments once pointed their undergraduates?

“The Young Men’s and Young Women’s Christian Associations are performing valuable services in our institutions. But if the philosophy and ethics of Christianity are not presented on a basis of intellectual parity with the non-Christian systems of thought with which every student of philosophy is brought into contact, all the organized and unorganized, paid and volunteer, work of a religious nature operating on our campuses lacks the solid foundation which the superstructure calls for.”

It is necessary, therefore, holds the writer, that if religion is to become vital in the colleges, the colleges must imprint their official stamp of approval by offering “adequate and attractive courses in the Christian philosophy and ethics,” and he assures us that the students themselves will be found anxious for such instruction. He would disarm hostility to a course in the Christian philosophy by declaring that “no one honestly disbelieves in the moral virtues of the Christian teaching.” To offer courses in religion, then, “is but the initial step in a program of a revitalization of religious interest and life in our colleges. To impart true spiritual leadership, the whole curriculum should be permeated with religious teaching and ideals.”

Unfortunately, we are told, there is a great dearth of moral and religious influence on the part of the faculties, “evidenced not only in the conduct of their courses, but also in the lack of faculty attendance at chapel and other religious services.” Yet, says the writer, “when you ask the students who of the faculty have been of the greatest influence and help, you will discover

TYPES OF BRIGANDS WHO THWARTED DR. SHELTON.

Yet it was among such people that the martyred medical missionary acted as brother and peacemaker, trying to cure them of both their moral and physical ills.

they are usually the same few teachers who have identified themselves with the religious life of the college.” For

“Religion is more than a matter of instruction—it is a part of life and of everyday life. . . . The naturalness, attractiveness and power of Christianity can be seen most clearly in the lives of men. Thus, the religious life of our colleges will become firmly established only when we have numbers of teachers who are, in every sense of the word, men themselves—sympathetic, desirous of helping and guiding their students, understanding and loving youth. When faculties are crowded with such men intent upon inculcating in those under them the highest ideals, then, and not till then, will we begin to approach a solution of our problem.”

RELIGIOUS PERSECUTION IN CHINA—Missionaries in China are just now passing through exceptional trials of strength and patience because of the disturbed condition of the country. The murder of Dr. Shelton, noted on the preceding page, is a case in point, and in other instances, as the following extract will show, the missionaries have to endure much more than the reviling to which they are more or less accustomed. The extract is from a letter written by the Rev. Joseph W. Hawley from Yung Chun, Fukien, and appears in *The Wesleyan Alumnus*:

“We are plugging along against pretty heavy odds just at present (Dec. 12, 1921), due to the deliberate persecution of the church by the northern troops. Just yesterday a letter came, telling of the complete and utter plundering of a chapel and parsonage, where lived the pastor and day-school teacher. The soldiers took possession of the place for four days, turning out the occupants, seizing and carrying away all food, bedding, clothing, and also \$250 from a chapel building fund they had on hand, destroying building material, but worst of all cruelly beating up the pastor and teacher after their strength gave out while carrying, at the point of a bayonet, a field-gun at the orders of the officer commanding the troops. This is not the first, but perhaps the most flagrant case, of such persecution that has been perpetrated, but it grows worse and worse all the time.”

ARMENIA IN THE FIERY FURNACE

RENEWED MASSACRES of Christians by the Turks in Asia Minor are said to be indicated in the recent expulsion of four American relief workers from that land of organized slaughter. The Turks have become emboldened by the vacillations of the Allies since the post-Armistice period, we are told, and now are further encouraged by the recent declaration of the Foreign Ministers of Great Britain, France and Italy that an agreement had been reached whereby the "territory now inhabited by the Armenians shall be under Turkish sovereignty." This follows and apparently nullifies the explicit declaration in the Sèvres Treaty that Turkey "recognizes, as the Allied Powers have already recognized, Armenia as a free and independent state." The Turkish Nationalists, who are charged with massacring the Armenians and Greeks, never recognized the Sèvres Treaty. If the Armenians should be returned to Turkish rule, asserts *The Herald of Gospel Liberty* (Christian),

"As surely as God lives and watches over the nations, there will be a dire and terrible penalty to be paid sometime by every great nation which to-day permits such a thing. Nations always reap what they sow—just as much as do individuals. No nation can wash its hands of a responsibility to use the power which it holds over another's safe-keeping, any more than could Pilate. If Armenia goes back to the butchery of the Turk, God will not withhold punishment, and the world shall again see 'the tramping out of vintage where the grapes of wrath are stored.'"

The one slim hope of the Armenians now seems to depend on the aid sought from the League of Nations in establishing a national home for them, and on the recent request of the British Government for the cooperation of the United States, France and Italy in investigating the latest Turkish atrocities. Austin Chamberlain, Government leader in the House of Commons, replying to a question, said that confirmation of the statement by an American major that the Turks were contemplating ridding themselves of the Armenians had been received, with some harrowing details. If, therefore, the Angora Government refused to cooperate in the proposed investigation, promised Mr. Chamberlain, the British Government would have to reconsider its attitude toward the recent peace proposals which would convey Armenia back to Turkish rule.

The Armenian deportations were the culmination of a long series of unfriendly acts, said F. B. Yowell, of Washington, director of the American Relief unit at Kharput, and one of the four workers expelled by the Turks. In a statement issued to the press at the time Mr. Yowell said that the deportations are "the prelude to fresh Turkish outrages against Christians in Asia Minor," and that "unless outside interference is forthcoming, the final chapter in the history of these Christians will shortly be completed." All the twenty Americans in Kharput had been treated with "the utmost discourtesy and injustice," notwithstanding that they had extended their work to the Moslems, and he went on:

"The Armenians in this district are in a state of virtual slavery. They are not permitted to travel within the country, and I have had to return \$75,000 to people in America who forwarded it to pay the traveling expenses of relatives desiring to leave the country. All the property of Armenians, victims of deportations, is confiscated by the Turks.

"The Armenians are denied the use of the courts. A recent law prevents Christians from inheriting property, except from father or brother. Other properties go to the Government. Christians are thrown into jail with the purpose of extorting ransom from relatives. Christian women are forced into harems without the right of appeal to any tribunal. The Turkish officials for six months have had no salaries. They say that the only way to obtain money consists of blackmailing Christians.

"The condition of the Greeks is worse than that of the Armenians. The sufferings of the Greeks deported from the districts behind the battle front continue. Of 30,000 who left Sivas 5,000 died before reaching Kharput. One American worker saw

1,500 dead on the road to Kharput. Two thousand died during the winter, and 3,000 died on the roads east of Kharput."

The very least of the pledges made to the Armenians, who were counted among the Allies during the war, says *The Christian Century* (Undenominational), "was that they should be assured a protected area and the end of persecution. Furthermore, the millions of dollars contributed by Americans to Armenian relief in the past was based upon the assumption that these distressed people should henceforth be safeguarded by international agreements against the renewal of Turkish atrocities." Yet "they are threatened again with the worst of their former sufferings, and this under Allied stipulations which would not be thinkable if our Government had taken a hand in the procedure." A cry for help comes from an Armenian woman, who has been speaking in various parts of America in the interests of her people. In an "open letter" to the American people, an extract from which appears in *The Reformed Church Messenger*, she says:

"From Maine to California, you have assured me of your sympathy for the Armenian people, and of your desire to help them get protection from the Turk. *Were you sincere in these demonstrations?* When I told you of Armenia's place in ancient and modern civilization, when I reminded you of her undaunted Christian ideals, when you learned of her sacrifice for the Allies in the World War, and when you heard of her betrayal to the Turk, did you not say to me, you Church, college and club people, from San Francisco to New York, did you not tell me that America is indignant at the injustice heaped upon the Armenians, *did you not say that your most popular representative would be that American who would have the courage to take a definite stand for Armenia?* I ask you now if you were sincere. For if you were sincere, my friends, *now has come the time for action.* Stand up for Armenia and demand that some measure of justice be meted out to her. Demand that she be protected from the descendants of the Mongol; give her the chance to take care of herself, and forbid the greed of Europe from throwing her back into the jaws of the Mohammedan wolf. Armenia is the cross-roads of the world. As in ancient days Armenia was Europe's gateway into India, so through her America will find a gateway to Russia and Asia. Stand by Armenia, America!"

THE INVISIBLE CRIME WAVE

SOMETHING LIKE seven-eighths of an iceberg, they say, is submerged, invisible to the eye of the seafarer. So people have been talking of the "crime wave" in terms of highway robberies, burglaries and hold-ups. But business men, we read on the market page of the *New York Times*, know that the real crime wave goes much beyond offenses of these kinds. In fact the sums that have been swindled and tricked quietly out of business men's pockets by such means is thought to be far greater than the amounts obtained through the sort of open criminality that is featured in the press. The writer remarks:

"Insurance men, for instance, are aware of the greater moral risk that has been incurred since the period of tumbling prices set in and which has increased the danger of incendiary fires. By these, needless losses of millions of dollars have occurred. Greater even than the losses so sustained, however, have been those resulting from fraudulent failures. A very large proportion of these has been on the part of brokers of one kind or another, but such failures are, by no means, confined to this class. There are only too many instances of compositions on the basis of from ten to twenty cents on the dollar which seem, on their face, to be clearly fraudulent, but which have been acquiesced in for one reason or another, usually because the creditors were not organized or were more eager to get a modicum of what was due them than to try and punish the offending debtor. The amounts unlawfully obtained in these swindles exceed by far all that has been stolen by burglars and highwaymen. Being less spectacular, however, this kind of crime has not excited the public attention so much as have crimes of violence, nor has it incited the prosecutions which it merits. But it begins now to look as tho more of a concerted effort will be made to reach culprits of the class under discussion. Credit men have taken up the matter and, if they succeed in their aim, it will be made risky as well as unpopular for debtors to swindle creditors."

THE GREAT BREAKFAST FOOD—GOOD, HOT SOUP

She's a dandy housekeeper
So I said, "Let's go!"
For she's a Campbell's housekeeper
And has her soup just so.

“—and they lived long
and happily ever after.”

Let Campbell's Soups help. Every taste of them puts an extra sparkle in your meal—they're so delicious and nourishing and tempting. Go to your grocer today and select an attractive Campbell's assortment, including your favorite soups and several "new" kinds for variety. Then see how much more everybody enjoys their food.

Campbell's Tomato Soup

is the favorite of millions—the best-liked soup in the world. Taste it and you'll know why! Luscious sun-sweetened tomatoes—aristocrats of the vines—give to it their pure tonic juices, enriched with smooth, golden table butter and the most delicate of piquant spicing. A bright spot in any meal!

21 kinds

12 cents a can

Delightful Variety in Campbell's Soups

Asparagus	Mulligatawny
Bean	Mutton
Beef	Oxtail
Bouillon	Pea
Celery	Pepper Pot
Chicken	Printanier
Chicken Gumbo (Okra)	Tomato
Consomme	Tomato-Okra
Julienne	Vegetable
Mock Turtle	Vegetable-Beef
	Vermicelli-Tomato

Your grocer can supply any
of these soups

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

THERE is hunger enough in the world to-day to make all the poets sing its grief. Miss Millay has been away in Europe for a long time now and probably she has seen some things that have moved her to this ballad that *Vanity Fair* prints in its latest issue:

THE BALLAD OF THE HARP WEAVER

BY EDNA ST. VINCENT MILLAY

"Son," said my mother, when I was knee-high,
"You've need of clothes to cover you, and not a rag have I.

"There's nothing in the house to make a boy breeches
Nor shears to cut a cloth with, nor thread to take stitches.

"There's nothing in the house but a loaf-eat of rye,
And a harp with a woman's head nobody will buy."
And she began to cry.

That was in the early fall. When came the late fall,

"Son," she said, "the sight of you makes your mother's blood crawl—

"Little skinny shoulder-blades sticking through your clothes—
And where you'll get a jacket from God above knows.

"It's lucky for me, lad, your daddy's in the ground,
And can't see the way I let his son go around!"
And she made a queer sound.

That was in the late fall. When the winter came
I'd not a pair of breeches nor a shirt to my name.

I couldn't go to school, or out of doors to play,
And all the other little boys passed our way.

"Son," said my mother, "come climb into my lap,
And I'll chafe your little bones while you take a nap."

And, oh, but we were silly for half an hour or more,
Me with my long legs dragging on the floor,

A-rock-rock-rocking to a mother-goose rhyme!
Oh, but we were happy for half an hour's time!

But there was I, a great boy, and what would folks say
To hear my mother singing me to sleep all day,
In such a daft way?

Men say the winter was bad that year,
Fuel was scarce, and food was dear.

A wind with a wolf's head howled about our door,
And we burned up the chairs and sat upon the floor.

All that was left was a chair we couldn't break,
And the harp with a woman's head nobody would take,
For song or pity's sake.

The night before Christmas I cried with the cold,
I cried myself to sleep like a two-year-old.

And in the deep night I felt my mother rise,
And stare down upon me with love in her eyes.

I saw my mother sitting on the one good chair,
A light falling on her from I couldn't tell where,

Looking nineteen, and not a day older,
And the harp with a woman's head leaned against her shoulder.

Her thin fingers moving in the thin tall strings
Were weav-weav-weaving wonderful things.

Many bright threads, from where I couldn't see,
Were running through the harp-strings rapidly.

And gold threads whistling through my mother's hand,
I saw the web grow, and the pattern expand.

She wove a child's jacket, and when it was done,
She laid it on the floor and wove another one.

She wove a red cloak so regal to see.
"She's made it for a king's son," I said, "and not for me."

But I knew it was for me.

She wove a pair of breeches quicker than that!
She wove a pair of boots and a little cocked hat,

She wove a pair of mittens, she wove a little blouse,
She wove all night in the still, cold house.

She sang as she worked, and the harp-strings spoke
Her voice never faltered, and the thread never broke.

And when I awoke,

There sat my mother with the harp against her shoulder,
Looking nineteen, and not a day older,

A smile about her lips, and a light about her head,
And her hands in the harp-strings frozen dead.

And, piled up beside her, and toppling to the skies,
Were the clothes of a king's son, just my size.

Prodigal of space as this poem in the *Survey* is, it refuses to be cut, and the interest of its picture repays, we hope, for the loss it compels of more various matter:

THE VILLAGER SINGS

BY CLIFFORD FRANKLIN GESSLER

I. The Villager

There was a boy, and he was born a villager;
and in the gloom of steel canyons he was a villager still.

a walker on pavements, staring with curious eyes
at the heedless hurrying swarms of city-dwellers
ceaselessly hurrying past like futile insects
going somewhere, or nowhere, and to what purpose?

A walker in the heaped up squalor of slum streets.

a gazer at brick-and-stone desolation of high
shouldered apartments
frowningly in unbroken columns filing down to
the cindery shore:

a walker past steel-fenced houses of the very rich

that scowled down with a stony stubbornness of riches;

a gazer at smoky, clamoring mills, and a
breather of smoke and clamor.

a toiler in dingy offices, a piece of a machine.

And through it all wondered, and knew himself a villager.

knew dimly that something was wrong with all these hurriers, this brick and stone, this clamor.

A part, yet not a part, of hurrying masses
poured upon bridges over dark, oily water,
and in the thundering darkness under "L"
structures,

in and out among the taxicabs like foolish
hurrying beetles scuttling over the boulevards;
facing the sharp wind along concrete beaches in winter

or in the fetid density of parks in summer,
he wondered. Yes, surely something was wrong.

* * *

"Somewhere there are men toiling in fields, who
think of ease in cities,
and girls under the soft snow of apple trees,
dreaming of cities,
boys trudging over dusty roads between walls of
hazel bushes
who look to the cities for a future that may be—
and may be not—

men, women, everywhere hurrying to the cities,
and when they get there they will know dimly
that something is wrong.

"They will wonder, and say, 'It was not so in the village.

In the village there were rich and poor, but not as here;

in the village, justice and injustice, but not as here.

Yes, surely,' they will say, 'there is something wrong.'"

* * *

So musing, he stood on a lonely spit of sand
a long time wondering, and heard
only confused music faintly blown
over gray sullen reaches of the inland sea.

II. The Villager Sings in Steel Canyons

The song of the villager as he stood by the gloomy water,

a stranger looking down to the dark tides of the city,

far bugles crying in his blood, and his face clouded,

gazing over wild broken ridges of the inland sea.

"You are lovely as the flower of the corn;
no doubt you are good to the taste as ripe wheat:
The dew falls, the vapor rises—
I am silent.

"You are an alien princess:
I am a stranger in your city, and poor:
The waves rush in and out
and I am silent.

"You are a priestess of forbidden gods:
dark altar fires gleam in your secret eyes.
Streets fill with gloomy hurrying torrents of folk;
mists writhe over your sullen towers—
I am silent."

So sang the villager, standing by gloomy water,
a stranger looking into the dark tides of the city,
far bugles crying in his blood; and his look was a look of darkness,
a look such as one might shrink from, terrible with longing.

So sang the villager, and heard in answer
only low mocking laughter, sweet and scornful,
only low laughter, borne on the shoulders of evening
over the bitter moaning of the inland sea.

III. The Villager Turns, Singing

So singing, the Villager cleaned out his dusty desk
and turned westward,
looking no more behind him, nor asking a memory.

but breathing, in his mind, as the muttering of dark water

repeated the endless tale of the wrongs of the city,

a prayer for all lovely flesh blooming out of gray pavements

and all lovely bodies and faces between the seas
and all kind lips lifted between earth and sky.

So turning away from the bruising of pavements
and the dark tides of life that break on the walls of the city,

without farewells he strode thence, breathing a blessing

on all dark slender women with flowing hair
and tall, fair shining women with eager lips
and golden magnificent women with asking eyes.

Building a song in his mind, out of the gates of the city

he passed, and the voice of the water followed,
low-pitched and mournful,

chanting the immemorial roll of the wrongs of the city,

the timeless, unutterable sorrows of the inland sea.

Agencies in 236 other cities.

Vogue's Paris Cable, May 15, gave this Style news:

“THERE is a marked tendency away from the over-elaborate shoe. For autumn wear, the fashionable woman will undoubtedly favor more conservative footwear. For street wear, the popularity of the fancy, bestrapped sandal and trimmed sports shoe is already on the decline.”

FASHION FOLLOWS ITS LEANING

For two years Fashion has been leaning toward more natural lines in footwear. During this period the demand for Cantilever Shoes has grown remarkably, showing a constant and large increase during the business depression. There must be some decided merit in a product which can show a growing demand when general business shows no growth.

WOMEN ENTHUSE OVER CANTILEVERS

Whatever the cause for the Cantilever increase in business, it is a fact that the home-loving mother, the business and professional woman, the outdoor girl, the ever-going society woman, all enthuse over the Cantilever Shoe for walking, shopping, and general daytime wear with any costume.

COMFORTABLE AND GOOD LOOKING

Cantilever Shoes help to preserve the beauty and health of the foot. Their graceful, natural lines provide room for every part of the foot, which means more comfort.

FREEDOM AND FOOT HEALTH

The arch of the Cantilever Shoe is flexible—like the arch of the human foot. In it the entire foot is free from restraint, which

permits good circulation and healthful exercise of the muscles as you walk.

By wearing Cantilever Shoes, you gain foot health as well as comfort; you enjoy walking, and you avoid the weakening of foot muscles and ligaments which causes fatigue, then pain, and eventually fallen arches.

FASHION WITHOUT FOOT WEARINESS

Perhaps tight shoes, rigid arches, too high heels or other causes have weakened your

Photos © Underwood & Underwood

feet and you tire easily, have pains in the feet, in the calves of the legs or in the back. If so, Cantilever Shoes will provide welcome support. The Cantilever shank, being flexible, draws up when the shoe is laced and holds the arch bones in normal position—like a bandage around the instep. This is a remarkable feature of Cantilever Shoes.

They permit exercise and free circulation which strengthen the arch muscles, and in due time a “weak foot” is corrected.

The American Woman today wants every article of her wardrobe to be comfortable—easy fitting—as well as modish. That is why so many women in all walks of life are buying the Cantilever Shoe.

To protect you we trade-mark all Cantilever Shoes. Only fine materials are used in their making. The men who work on them have had years of training in making a flexible arch shoe. The reasonable prices bring this comfortable shoe within the reach of every woman.

Cantilever Dealers understand the foot and know how to fit it properly. Except in New York there is only one dealer in each town. If there is no dealer near you listed at the left of this advertisement, write to the manufacturers, Morse & Burt Co., 1 Carlton Ave., Brooklyn, N. Y., for the name of a nearby dealer and receive an informative booklet on feet and shoes.

The Cantilever Shoe is endorsed by Women's Colleges, Women's Clubs, Public Health Authorities, Physicians, Osteopaths, Directors of Physical Education, Editors, Stage Celebrities and prominent women everywhere.

Cantilever Shoe

quiet, precocious little boy in a big house, watching him unconsciously being prepared by life to be one of the earth's odd men—perhaps one of the world's great men.

I saw his pious mother, a shadowy figure in the background of his youth—his father, in the height of a brilliant career smashing it to pieces on the sharp crags of an uncompromising faith—his non-conformist uncle deliberately hurling himself from the high places which life had allotted him, because he would insist on publicly hoping that his monarch would listen to the voice of the people.

During his early boyhood days his father was counsellor of the Russian Embassy in Paris. He had been chosen as Russian Ambassador to America, when an incident occurred which put an end to his career. He was offered an insult which, according to the nobles' code of the hour, could be settled only with pistols. But the elder Tchitcherine belonged to a Protestant pietist group led by Edmond de Pressensé, and condemnation of dueling was one of the tenets of the creed. He refused the duel on principle, but considered himself disgraced; resigned his diplomatic career and went into seclusion on his country estate in Russia. There he lived, unhappy, tormented by the idea that people would think him a coward. Then the Turkish War began. He went to the front with the Red Cross and courted death, but the bullets of the Turks persistently evaded him. There in the marshes he acquired a disease from which he died in 1882.

George Tchitcherine was ten years old at this time, and his uncle inherited the guardianship of the small lad. This uncle was a Liberal, holding the high post of Lord Mayor of Moscow. When Alexander III was crowned, the Lord Mayor pronounced the speech that put an end to his career in this office. It was not socialism or anything akin to it that the Lord Mayor advocated. It was not even so desperate a thing as democracy he wanted. He asked only that the Tsar listen to the voice of the people, but in those days that was red radicalism akin to anarchy.

Tchitcherine got a grounding in liberal ideas from this man. In his youth, however, writes Miss Beatty, history fascinated him most—that and music. She says of him:

He has the sensitive speaking hands of a musician, and used to play the flute or the piano sometimes whole days and nights at a time. To-day he touches neither. Only once since the revolution has he gone to a concert. Musically, Wagner had the strongest influence on his life. He was seventeen when the first Wagnerian opera was produced in Petrograd. He went quite mad over it. He calls Bach colossal, superhuman, and speaks of Mozart as supersweetness, the Hellenic Greek ideal.

"Don't you miss it all terribly?" I asked.

"I prefer not to awake a world of sensation that would take me away from my direct activity," he answered.

His office, a large, square, barren room in the huge building recently taken over for the Commissariat of Foreign Affairs, is carpeted and correct in accordance with Russia's idea of what befits her growing respectability, but it has the austerity of a monk's cell despite anything the secretaries can do to it. It is neither the shining place of high-polished efficiency from which Trotzky directs the Red Army nor the convenient bookish workshop of Lenin. It is the room in which for purposes of the Soviet State Tchitcherine is sentenced to keep his bodily form. The real foreign office is under the slightly bald top of the Commissar's own head, and nobody doubts it.

Tchitcherine's workday starts at three or four in the afternoon when most of Moscow is quitting its job and he works through until ten or eleven next morning. The office is open twenty-four hours a day and the secretariat and stenographers work shifts. Many of them have described his method of work to me. He goes from one to the other dictating in French or English, German, or Russian, equally at home in all of them. One of his stenographers told me she could tell the mood he was in by the language he used.

Another newspaper woman, Marguerite E. Harrison, who got a close view of the Bolshevik diplomat testifies to his devotion to his work. She writes in the *New York Times* of the time when she knew him in Moscow. At this time, she says: -

His chief pleasure in life was his exchange of notes with Lord Curzon, in which he usually got the better of his British opponent, and he was always in a particularly good humor after he had dispatched one of his politely sarcastic notes to the Foreign Secretary. He read and censored every dispatch sent from the Foreign Office, read all the foreign papers attentively and attended personally to the smallest details, leaving little to the discretion of his employees. I often met him running up and down the stairs like an office boy with a sheaf of papers in his hand on his way to confer with one of his subordinates. The

idea that he could ring and summon the person he wished to see never seemed to occur to him.

In his own office he employed several secretaries, whom he drove as unsparingly as he drove himself, and the post of secretary was an unenviable distinction. Once installed, it was next to impossible to escape from office.

Among my friends was one of his woman secretaries, a young girl who had been educated in England where her father was a political exile. He and his daughter had returned to Russia with Tchitcherine, after the March Revolution. She was engaged to an English Army officer, and when trade negotiations with England began she tried to get permission to leave the country, but Tchitcherine refused point-blank to let her go. In order to have his employees under his eye he made most of them live in rooms on the lower floors of the Foreign Office.

In his relations with his colleagues Tchitcherine always maintained an aloof impersonal attitude, and as far as I could discover, except for Lenin, he had no personal friends in all Russia. He had identified himself with the Bolshevik régime because it stood for ideals which he had advocated for years in principle, but between him and his associates there was the invisible wall of class. He accepted Marxism as a political theory, but he was totally incapable of appreciating its social significance, and on the rare occasions when he spoke in public there was something singularly unconvincing in his perfunctory phrases about the "workers" and the "dictatorship" of the proletariat.

The attitude of America toward Russia was always a puzzle to him, says Miss Harrison:

He told me that he regarded the stand of President Wilson as frankly inconsistent.

"Wilson was the first representative of a world Power to advocate the principle of self-determination," he said, "and he has been the first to depart from it. Russia is the only country that has consistently lived by this doctrine."

Of all the acts of this country toward Russia he most bitterly resented the deportation of the American anarchists, regarding it as a gross breach of international courtesy that they should have been dumped down on Russia without notice or warning to the Soviet Government.

With regard to internal affairs in Russia, I believe he knew or cared very little, and I think he was frequently out of harmony with the other Communist leaders with regard to foreign policy. His one object was to assert and maintain the prestige of Russia among the nations of the world, and his dream to secure political domination of Asia. Converting the world to Bolshevism interested him very little, but to spread Slav influence in Eastern Europe and make it predominant was his ruling passion. In this he was perhaps unconsciously influenced by his aristocratic background.

To the Russian people, Tchitcherine is practically unknown. He lives in a world of his own, bounded by the Hotel Metropole, almost in self-imprisonment. Personally, I believe that his influence within the party has always been for moderation and for the adoption of a policy that will bring about the rehabilitation of the Russian State even at the price of a sacrifice of basic principles. Only he is not willing to abandon those principles under outside pressure. As a nationalist he feels that any internal political changes must come about spontaneously within Russia. For this reason Tchitcherine has the support of a large proportion of the Russian Intelligentsia, which is out of sympathy with the Soviet Government, and his foreign policy is upheld by many of the bitterest opponents of the system for which he stands.

In principle he is "Comrade" Tchitcherine, representative of the Workers' Republic, but in fact he is "M. Tchitcherine," Slavophile, aristocrat and patriot. There are thousands of Tchitcherines in Russia, most of them entirely unknown to the outside world and in them lies the hope of the regeneration of Russia through a process of evolution within the present Government.

"Bolshevism has destroyed everything . . . except diplomacy," says the Paris *Matin*, paying tribute to Tchitcherine's cleverness. The writer has the customary French bitterness against all the leaders of modern Russia, but in the case of the Foreign Minister he is driven to a grudging admiration. He recounts Tchitcherine's various diplomatic triumphs, including the embargo which the Russian diplomat obtained, by enlisting the aid of English dock laborers, upon shells destined for Poland. He concludes:

After having vainly tried to stir up a revolution in the Occident, Tchitcherine has decided that in that particular direction the ground is not yet fully prepared. "Our future is in Asia," he declared in the course of the debate which decided peace with Poland. He threatens the peace of the world.

"Do it right or not at all."—JOHN DAVEY.

and Fruit-growing, and above all the Theory and Practice of Tree Surgery.

Every man in the Davey organization is a trained man—Davey trained

When a man has been with us long enough, has had the necessary amount of complete training, and has demonstrated to us his ability and qualifications, he is entrusted with the handling of operations—then and only then.

Every man in the Davey organization is a trained man—Davey trained. If a man should apply to us for employment and say that he is an expert and understands all phases of the work—recommends himself highly—we say to him, if we should happen to need men, "All right, you may start in at the bottom and show us." Very few of them ever come and we are just as well satisfied. Our experience has shown us that not more than one in ten of these so-called tree men from the outside is the right kind of man. None of them are real experts when they come to us. All of them have many things to unlearn.

The Davey Research Department does the experimenting—the client's trees are never experimented upon

In addition to all these other things, we maintain a Research Department in charge of scientists of practical experience. It is their duty to work out every scientific and practical problem of Tree Surgery, as fast as possible. They have done wonderful work. They gather data from every available source, particularly from the experience of the Davey organization, in addition to original experiments. Every experiment is conducted in Kent by our Research Department and never on the trees of a client.

For instance, our Research Department has worked out a list of "forbidden trees," those which experience has demonstrated are not worth complete treatment or do not respond properly to treatment. On these trees our experts are permitted to do only first-aid work.

A national organization that carries with it an assured protection to tree owners

There is no other national organization in our field. There are, of course, many local imitators. It is an unfortunate fact that there are mighty few good ones among them. We would be happy if they were all good and well qualified. But who will supervise them? Who will train them? Who will provide the discipline that will hold them to high-quality service? Who will pass judgment on the results of their work?

There are quite a number, who have never had any contact with the Davey organization, who

claim falsely that they are Davey men. There are some, unfortunately, whom we have been obliged to let go for obvious faults, who attempt to capitalize on the prestige of the Davey name, to our detriment and to that of the profession we have built up and have endeavored to honor.

The unseen things that make quality are only possible because of large volume

In the Davey organization it is the unseen things (rigid selection of men, practical and thorough training, supervision of chief expert and local representatives, resident school, Research Department, standardization of methods and organization discipline) that make real quality and lasting merit. On a business of nearly three-quarters of a million dollars in 1920, we spent three times as much on these unseen things which make quality as we made in profit. In spite of the depression,

we did a business of almost six hundred thousand in 1921 and spent four times as much on these hidden things that make quality as our profit amounted to. The business of the Davey Company is now running at the rate of one million dollars for 1922.

Davey methods have been standardized. Davey work is the same in Boston as it is in Chicago, the same in New York as in Kansas City, the same in Montreal as in New Orleans. Davey experts are of uniformly high type, all thoroughly trained, all carefully selected and developed. And best of all is organization discipline that require and maintains a constant high standard down to the smallest details of work and service.

A tree-man may fool the public but he cannot fool us

It has seemed to me that the greatest thing the Davey organization does for its clients, over and above all these other things, is that of relieving the client of all worry and responsibility in the selection of the men who are to treat his priceless trees. A tree-man may fool the public, most of whom know little about trees. But he cannot fool us. A man must be right in every sense of the word or he cannot go very far in the Davey organization.

We, who know Tree Surgery values, select the men to whom this work of very great importance is to be entrusted. We know they are right and worthy of your confidence and our confidence or we would not send them to you. They come to you with our seal of approval.

They carry with them the most priceless possession we have—our reputation. We are as jealous of that reputation as a good woman is of her good name. Business and professional success are merely results. The causes are behind the scenes. And that is the reason for this little story of the Davey organization.

THE DAVEY TREE EXPERT CO., Inc.,
2556 Elm Street, Kent, Ohio.

Branch offices with telephone connections: New York, Astor Trust Bldg. Fifth Ave. and 42nd St.; Boston, Massachusetts Trust Bldg.; Philadelphia, Land Title Bldg.; Baltimore, American Bldg.; Pittsburgh, 331 Fourth Ave.; Buffalo, 110 Franklin St.; Cleveland, Hippodrome Bldg.; Detroit, General Motors Bldg.; Cincinnati, Mercantile Library Bldg.; Chicago, Westminster Bldg.; St. Louis, Central National Bank Bldg.; Kansas City, Scarritt Bldg.; Montreal, 252 Laugachitère, West.

Davey Tree Surgeons are near you—if you live between Boston and Kansas City. They are easily available and handle operations of any size, large or small. Write or wire Kent, Ohio, or nearest office.

JOHN DAVEY

Father of Tree Surgery

John Davey gave to the world the science of Tree Surgery. Before the publication of his first book, the original "Tree Doctor," not even the idea of the scientific treatment of trees existed. John Davey created the term

"Tree Surgery." Every fundamental principle of it was the product of his genius and love. Every improvement and refinement has been worked out in the organization which he brought into being and inspired. But the greatest contribution which John Davey has made to the world, has been to translate into popular form the fact that the tree is a living, breathing organism.

MARTIN L. DAVEY

General Manager, who made of a father's dream a business reality and built the Davey organization.

"And yet the tree lives—it breathes. It has a real circulation. The tree digests its food and assimilates it. It has sexual processes that are just as real and beautiful as in any other form of life. It has the power to adapt itself to its environment. To be sure, it lacks intelligence and a nervous system and the power of locomotion. But in all the other elemental processes the tree functions just as truly as man himself."

"This question of reforestation is of monumental importance. America can not continue to exist as a virile, forward-moving Nation unless we protect what we have and start to build up that which we have so ruthlessly destroyed. We can not afford to be a Nation of vandals much longer. America must reforest, or America must drink the bitter dregs of national decline and impotency."—Excerpts from a speech in Congress, March 3, 1921, by Martin L. Davey, of Ohio.

DAVEY TREE SURGEONS

Every real Davey Tree Surgeon is in the employ of The Davey Tree Expert Co., Inc., and the public is cautioned against those falsely representing themselves. An agreement made with the Davey Company and not with an individual is certain evidence of genuineness. Protect yourself from impostors. If anyone solicits the care of your trees who is not directly in our employ, and claims to be a Davey man, write Headquarters for his record. Save yourself from loss and your trees from harm.

A MEMORIAL TO A NEGRO "IMMORTAL."

This monument to Dr. Washington, lately unveiled at the Tuskegee Institute, was erected at a cost of \$25,000, subscribed by more than 100,000 negroes. Speakers at the unveiling, including ex-Secretary Daniels, placed the colored educator among the Americans whose fame will never die.

NEW HONORS FOR BOOKER T. WASHINGTON

A MONUMENT IN BRONZE AND MARBLE, paid for by the contributions of more than 100,000 negroes, was unveiled the other day to the memory of the late Booker T. Washington, the negro educator. Among the newspaper correspondents present was one whose father had owned slaves, who was "brought up in the days of reconstruction," and who now, after years abroad and other years in the West and North of his own country, once more lives in the South. It may be particularly fitting, he intimates, that a Southern newspaper man should prepare, mainly for Southerners, a new appreciation of this negro "Immortal." The writer, Frank Willis Barnett, joins with Josephus Daniels, former Secretary of the Navy, in hailing it as "an unprecedented event" that "men of both races, living together in the South, and friends from the North, should gather to unveil a monument in Washington's honor." Mr. Daniels spoke briefly at the dedication, but to Mr. Barnett fell the task of making a new summary of Dr. Washington's career. This summary has been widely circulated and appreciated throughout the South. Mr. Barnett is quoted by the Birmingham (Ala.) News:

Had Booker Washington's career been complete before Carlyle wrote his famous work on "Heroes," the dour old Scot would have had a chance to have added another outstanding figure to the ones he enshrined in his gallery of the great. It would be wonderfully interesting to have in print a character study in Carlylese of the negro slave who rose out of slavery and abject poverty to be a world figure.

Biography has always been a passion of the writer, and only one thing has ever gript him more, and that is autobiography. All the way down from the Memoirs of Cellini, through the Confessions of Marie Bashkirtseff, to "The Education of Henry Adams," there have been revelations of individuals of consuming interest; but none have had the simplicity and the pull of Booker Washington's "Up from Slavery."

Let any man, it makes no difference his race, color or creed, read the story and he will have to confess that it is a human document in a class by itself, and of tremendous significance not merely from the standpoint of personal endeavor, but from the impersonal consequences which flowed from one life into the lives of a people. This gives it its status as one of the great autobiographies of all time.

Truth is stranger than fiction, is a trite old adage, and yet it can never grow stale if used in connection with the story of such a one as "The Moses of His Race." The character could

not have been invented even by a Shakespeare, "the myriad-minded," and if it had the critics would have written it down as being wholly beyond the bounds of human possibility. It staggers even the credulity of those who lived close to the man or followed the simple facts of the unknown slave boy from obscurity until he touched in a personal way the lives of millions of his race and stood in the presence of presidents and kings.

Born on a slave plantation in Virginia, near a crossroads post-office called Hale's Ford, he is not sure of the place of his birth, but first saw the light in a typical cabin, about 14 by 16 feet square, where he lived with his mother and a brother and sister until after the Civil War, when they were all declared free. The day, the month or the year of his birth was unknown, tho he thought it was some time in the year of 1858 or 1859. The great fact, however, is that he came into the world.

Absolutely in the dark about his ancestry, he only was able to know definitely about his mother, who had a half-brother and a half-sister. He quaintly says, without any trace of bitterness, that scant attention was given to family history and family records, that is, black family records. No use here to go into the relations which existed between the slave women and their owners or their neighbors. He did not even know the name of his father, but heard reports that he was a white man who lived on a near-by plantation. His stepfather did not belong to the same owners as his mother, and, in fact, came seldom to visit her.

At the close of the war the negroes had to get names for themselves. When they were slaves, a colored person was simply called "John" or "Susan." This was enough to identify them in bondage. If "John" belonged to a man by the name of "Hatcher," sometimes he was called "John Hatcher," or as often "Hatcher's John." On being freed, however, most of the negroes gave up the surnames of their former owners, as it meant a deliverance from slavery. For instance, "John Hatcher" would bloom out as "John S. Lincoln," the initial standing for no name, "it being," according to Washington, "simply a part of what the colored man called his 'entitles.'" So the future leader of his race had to get a name:

He says from the time when he could remember anything, he had simply been called "Booker." It never dawned on him until he went to school that it was thought necessary to have an additional one. It came to him at roll-call when the other children always answered to two, and some of them indulged in the luxury of three. And so when the teacher asked him his full name he was equal to the occasion and promptly answered "Booker Washington." He used to say with a smile, "I think there are

And Now — The Barrett Specification Roof!

FROM corner-stone to cornice, the modern structures that house the nation's business are built to endure. The foundations rest on bed rock. Steel frame-work and steel girders support the weight of walls and floors. And when they are ready to be roofed the great majority of them are covered with Barrett Specification Roofs.

That these roofs should be the almost unanimous choice of owners and architects of such buildings, is not surprising when you consider —

That we can name many roofs of this type in good condition after forty or more years of service. Their durability is *proved*, not estimated.

That they are *bonded* against maintenance expense. Barrett Inspection Service during construction insures strict compliance with the roofing specifications, and a Surety Company Bond absolutely protects the owner from all roof repair during the bonded period.

That moderate first cost and guaranteed freedom from maintenance make them the most economical roofs it is possible to build.

That they provide a degree of fire protection not

exceeded by any other roof. They always take the base rate of fire insurance.

The Barrett Specification Type "AA" 20-Year Bonded Roof represents the most permanent roof covering it is possible to construct, and while we bond it for twenty years only, we can name many roofs of this type that have been in service over forty years and are still in good condition.

Where the character of the building does not justify a roof of such extreme length of service, we recommend the Barrett Specification Type "A" Roof, bonded for 10 years. Both roofs are built of the same high grade materials, the only difference being in the quantity used.

The Surety Company Bond, absolutely protecting the owner from maintenance expense, is issued free of charge on Barrett

Specification Roofs of 50 squares or larger, in towns of 25,000 or more, and in smaller places where our inspection service is available.

not many men in our country who have had the privilege of naming themselves in the way that I have." It was later in life, after having appropriated the name of "Washington," that he learned that his mother had called him at his birth "Booker Taliaferro."

The nameless boy's early surroundings were in keeping with his lack of "entitlements." The cabin was not only the living-place, but was used as the kitchen for the plantation, as his mother was the cook. It was without glass windows. The window which gave in light was but a shutter, and the door hung on uncertain hinges. It caused the boy to wonder why a "cathole" was provided, as there were plenty of cracks large enough to let "Tom or Tabby" in or out at will. The naked earth was the floor. There was no cooking stove, the cooking being done mostly in pots or "skillets." He never slept in a bed until free. John, Amanda and Booker had a pallet on Mother Earth, or, to follow the record truthfully, "they slept in and on a bundle of filthy rags laid upon the dirt floor." He had never slept in a bed that had two sheets on it until he went to Hampton, and they were quite a puzzle to him. He says the first night he slept under both, the second night on top of both, but by watching the other boys on the third night he got in between them.

The first pair of shoes he ever wore were wooden ones, with rough leather tops with soles of wood an inch thick; but the greatest trial was wearing a flax shirt which cruelly tore his tender skin. It was made of coarse or refuse flax, and they had to be "broken in" like shoes. He not only learned when he went to school that he was shy a last name but that he had no hat or cap, and it was a sore embarrassment to him, as the others wore them. It was then his mother got two pieces of "homespun" (jeans) and sewed them together, and he was the proud possessor of his first "head-piece." While a student at Hampton, for some time, he had only one pair of socks.

Get this picture, suggests Mr. Barnett: Washington tells how when a little boy he saw two of his young mistresses and some lady visitors eating ginger cakes in the yard; and he thought as they talked of the war that if ever he got to be free the height of his ambition would be satisfied if he could rise in life sufficiently to be able to eat ginger cakes. His usual diet was corn bread and pork, but on Sunday morning his mother was permitted to bring down a little molasses from the "big house," for her three children. The writer goes on:

It is pathetic to hear him tell how he would hold up his plate for the sweet morsel, but would always shut his eyes while the molasses was being poured into the plate, with the hope that when he opened them he would be surprised to know how much he had got. And then when he did take a peep he would tip the plate in all directions to make it spread out, in the full belief that it increased in size, and would last longer. His share was usually a couple of tablespoons. He then tells how strange it seemed in later life that he could sit listless and unmoved at a long course dinner.

The man who was to receive an honorary degree from Harvard University says that the first thing he ever learned in a book was the number "18," which was the numeral allotted to his stepfather who worked in a salt factory, it being painted on the barrel under his charge. But it was a great day when his mother procured for him an old copy of Webster's "blue-back" spelling-book, and gave him a chance to wrestle with the alphabet without help from any one, as none of his race could read. Freedom set a race eager to master the art of reading, none were too young or too old to make the attempt. The great ambition of the older ones being to learn enough to read the Bible.

It was by chance that "Booker," while at work in a coal mine, happened to overhear the miners talking about a great school for colored people somewhere in Virginia, and the story of how then and there he made up his mind to go to it and the terrible journey is one of the romances of education. Starting with a "blue-back" speller he gradually began to collect a "library." It was housed in a dry-goods box, knocked out on the sides and arranged with shelves in which were stored a few precious volumes. John helped him, and others gave him from a nickel to a quarter, and the great day came when he started from Malden, West Va., to Hampton, Va., about 500 miles away.

It was a trip as full of hardships for him as was the cross-country voyage of the '49er, who went to California in search of gold, with this difference, the lure before them were the golden sands, while the lone star which drew "Booker" was the chance to get an education. Money gone, he walked the streets of Richmond hungry, while at night he crawled beneath a boardwalk, and with his satchel for a pillow slept, on an empty stomach.

After getting work he continued to use his soft spot on the ground in order to save enough to get to his destination. Many years afterward colored citizens of Richmond gave him a reception at which 2,000 were present near the spot where he had lived almost as an outcast. He reached Hampton with fifty cents, and

few things in the realm of literature are more realistic than his description of his appearance when entering the sacred portals, and how "the sweeping of a room was his college examination," for the first thing he was told to do was when a teacher, said: "The adjoining recitation-room needs sweeping. Take the broom and sweep it."

It may seem a strange thing, says Mr. Barnett, but here is where the writer is going to link together Booker Washington and Charles Dickens, for in spite of their color, and in the face of the fact that one was an American and the other an Englishman, there are some things in their lives which almost touch. The great novelist's boyhood was not a bed of roses, for his father was improvident, and when his mother took over a school Charles had to play the janitor as did Booker at Hampton, for he was "boots." Then too—

His labors at a tender age in the blacking factory, pasting labels on bottles, with rough companions, were similar to the tasks of Booker in the salt mines at Malden. The black boy became the leader of his people, while the white boy gave joy around the globe through his immortal works.

It was in Atlanta, in September, 1895, at the opening of the Atlanta Cotton States and International Exposition that the writer first heard the name of Booker T. Washington, for his speech was the sensation of the hour. James Creelman began his famous wire to the New York *World* as follows: "While President Cleveland was waiting at Gray Gables to-day, to send the electric spark that started the machinery of the Atlanta Exposition, a negro Moses stood before a great audience of white people and delivered an oration that marks a new epoch in the history of the South. Nothing has happened since Henry Grady's immortal speech before the New England Society in New York that indicates so profoundly the spirit of the New South, except, perhaps, the opening of the exposition itself."

Not only did the orator thrill those who heard him, but his oration was the talk in the homes, at the clubs, in the hotel lobbies, on the street-cars and on the sidewalks, and well it might, for as was noted it was the first time that a negro had made a speech in the South on any important occasion before an audience composed of white men and women. It electrified the audience, and the response was as if it had come from the throat of a whirlwind. Washington had declared "that in all things that are purely social we can be as separate as the fingers, yet one as the hand in all things essential to mutual progress." Creelman says at these words "the whole audience was on its feet in a delirium of applause," and I thought at the moment of the night when Henry Grady stood among the curling wreaths of tobacco smoke in Delmonico's banquet-hall and said: "I am a Cavalier among Roundheads"; and then he adds, "most of the negroes in the audience were crying, perhaps without knowing why." It was common talk at the time that the unknown negro had outshone in brilliance the dazzling and sparkling orator, Emory Speer; perhaps the reason being that the white man was making a speech while the black man was pleading a cause.

The next great occasion when Booker Washington made himself known to the writer was about a score of years ago when he was attending the Sociological Congress at Harvard University, which was held in Phillips Brooks Hall. It was a wonderful gathering, Mr. Barnett recalls, and the address of the negro educator was worthy of the occasion. Mr. Barnett writes:

Washington spoke for an hour, and when he sat down the writer turned to his wife and said: "If I had been put up to state the position of the Southern white man in his course toward the negro before and after the war, I couldn't have put it half so strongly as did the speaker."

Walking up to the orator, the writer said: "I am from the South, and I want to thank you for the way you stood up for Southerners." With a rare smile he replied, "I did not know there were any Southern people in the audience, but I am glad you liked what I told these Yankees." No one after the incident was ever able to make the writer believe that Booker Washington had one message for those north of the Mason and Dixon Line and another for those on its south side.

There are scores of interesting things which could be set down here to show the ascent of the negro boy born in slavery to be a leader among leaders, but they must be passed over. Suffice it to say that his struggle to get an education is an epic in the educational world and ought to be a spur to every white boy and shame those who complain that they have no chance. But it was a long and hard climb from the day when with "blue-back" speller in hand he mounted the first rung of the educational ladder until the day came when he was the president of the greatest negro institution in all the world, and invited to deliver addresses in the great universities and colleges.

A MAGICIAN WHO MISTRUSTS "SPIRITS," AND ALL THEIR WORKS

A MAN WHO COULD MAKE AN ELEPHANT DISAPPEAR and a grand piano float in the air—at least to all appearances—once undertook the job of being a medium. Since that time he has become known as a magician of parts, as well as the author of several books on magic. Harry Houdini is his name, and, while he does not go so far as to say that there is nothing whatever in spiritism, he does claim to be able to reproduce "any signal or bit of legerdemain which mediums use, no matter how unearthly it may seem to the untrained beholder." The magician has had some experience, both in acting as a medium and in exposing the tricks of mediums. His interest in psychic fields, also, he says, has led him, within the last 25 years, to make compacts with seven persons, since dead, that the one dying first would communicate with the other if it were possible. In no case has he received any communication. In 30 years of experience, he told James C. Young, a correspondent of the *New York Times*, he has never heard of, nor seen, "any so-called spirit manifestation which could not be explained on a purely material basis." Mr. Young quotes the magician:

"The average man who does not believe in spiritism is likely to laugh at the idea that he could be deceived," continued Houdini. "but I have seen men of this kind so astonished that they were ready to believe almost anything. Soon after Roosevelt came back from South America, I was going to Europe on the *Imperator*, and he chanced to be a passenger. I was asked to give an entertainment, and the subject of spirit writing came up. Victor Herbert and a number of other well-known men were present, all of them having intelligence of a high order. Certainly that was not a credulous audience. I offered to summon the spirits and have them answer any questions which might be asked. Roosevelt wanted to know if they could tell him where he spent his last Christmas Day. I had a slate with the usual covering, and in a few moments brought forth a map, done in a dozen colors of chalk, which indicated the spot where he had been on the famous River of Doubt. That map was an exact duplicate of one which was to appear in his book, and which had not yet been published. I never had seen the map, and to make my case stronger, the name of W. T. Stead, the English writer lost on the *Titanic*, was signed below the map with a signature which one man present recognized as a copy of Stead's writing. And I might add that I was unfamiliar with Stead's signature.

"Roosevelt was dumfounded; 'Is that really spirit writing?' he asked. 'Yes,' I replied, with a wink, and I am sorry I can not tell your readers how it was done. But you can see that it is not difficult for one who understands mystification to accomplish things which seem past all explanation. With a demonstration such as I have just outlined it would be possible to convince a large percentage of people that I was possess of mystic powers. But all my work could be done by anybody else if they understood how."

In his early days, Houdini, says the writer, once tried the business of being a medium. It was out in Kansas and the show for which he was working had fallen upon hard times. He told the manager that he would undertake to appear as a medium and help matters along. The manager advertised that Houdini could "float pianos in midair" and do a few other things of the sort. Mr. Young goes on:

When the time arrived for Houdini's act, he puzzled the crowd by telling particulars about the births and deaths in half the families of the town. Gradually he worked up to a climax, exclaiming: "Now, what do I see! What is this coming before me? Why, it is a man—a black man. He's lame—and his throat is cut from ear to ear. Who is this man—why, I know him; he is Efram—Efram Alexander." At that point the negroes in the gallery broke for the doors, because Houdini was describing a man killed recently. He had picked up a few facts which all of them knew, but his "spirit talking" was more than ordinary nerves could stand.

"I had gone around to the cemeteries and read all of the inscriptions on tombstones, looked over a few birth and death records and acquired a lot of information from the gossips," said Houdini. "I was ready to answer almost anything. But the crowd was so anxious, my information began to run out. Then I was amazed to find that no matter what I said, it applied to somebody in the audience, and before the show was over I had the making of a fine reputation as a medium.

"That is the way professional mediums work. I have been to thousands of séances, because this question of spirit communication is one which has interested me all my life. And I have not gone with a skeptical mind, but in a mood to receive the truth if there was any one who could impart it to me."

In the days when Houdini was still a barnstorming entertainer, the story runs, a deputation came to him in a Missouri town and asked that he undertake to expose a local medium who had been playing hob with that community. Houdini agreed, but the medium came to him and told a story of hard luck, requesting that Houdini permit one more séance, when he promised to leave town. Houdini's sympathy was enlisted, and he made a compact with the medium to help him out. When the time for the séance came, three or four men held the medium, one with a hand over his mouth, and waited for the exposure. Instead, Houdini did all of the medium's tricks, with a few more besides. Trouble came out of that situation, for—

"The believers were just as anxious to uphold their medium as the others were to expose him," said Houdini. "While I had the table walking somebody threw a rock on it, and that was not part of my program. I am satisfied that some one brought the rock along so as to help the medium out if he really got into trouble. They were not taking any chances on his being unable to give a sign at the right moment."

A favorite practise with many mediums is the sounding of a trumpet as a kind of introduction for the spirits. Houdini says he met one man who had developed this piece of mystification to the point where he could blow a trumpet lying on a table several feet away by a sort of ventriloquism.

According to Houdini, mediums make capital out of suggestions which sometimes come to people from no apparent source and for no apparent cause.

Houdini was reminded that several men of the first rank have become convinced that they had received messages from the dead, and was asked if his experiments in psychic fields had thrown any light on this subject. He is quoted in reply:

"I have made compacts with seven persons that the one of us dying first would communicate with the other if it were possible, but I have never received a word. The first compact was made twenty-five years ago, and I am certain that if any one of those persons could have reached me he would have done so. The last one was my secretary, a man of mature years, and we were very much attached to each other. The day before an operation he said to me, 'Houdini, this may be the end. If it is, I am coming back to you no matter what happens on the other side, providing there is any way that I can reach you. And if I can come, you will know it is me, because I am going to will it so strong that you can not be mistaken.' He died the next day. That was more than a year ago and there has been no sign. I have waited and watched, believing that if any man ever could have sent back word, he would have been the man. And I know that our minds were so close to each other that I must have received the signal if there had been one. But I never have had even a suggestion that my friend wanted to call me. No one could accuse me of being unwilling to receive such a sign, because it would have been the greatest enlightenment I could possibly have had in this world."

Self-hypnotism, according to Houdini, is a common form of deception practised by those who believe that they have had messages from the dead without the help of mediums. And this willingness to believe, of course, is another prime stock in trade for mediums. Houdini said that even Harry Kellar, now dead, and whom he regarded as the greatest of all magicians, confessed to him that he had been fooled by clever manipulators. Kellar said this was because he did not know what to expect nor in which direction to guide his intelligence when the mystifier began to work.

"The secret of all such performances is to catch the mind off guard, and the moment after it has been surprized to follow up with something else that carries the intelligence along with the performer, even against the will," said Houdini. "When it is possible to do this with a highly developed mind, consider what can be done with persons who are anxious to believe. The distressed relatives catch at the least word which may remotely indicate that the spirit they seek is in communication with them. Even one little sign which appeals to their waiting imagination scatters all ordinary caution and they are converted. Then they begin to accept all kinds of natural events as results of spirit intervention. This state of mind is productive of many misfortunes, as proved by the number of suicides of people who think they are going to happiness with loved ones beyond the pale."

PLAYGROUNDS OF NEW YORK STATE

"The Hudson River is a noble threshold to a great continent and New York Bay a fitting portal," says Wallace Bruce in his book, "The Hudson," and as David Lear Buckman writes in "Old Steamboat Days on the Hudson" (Grafton Press.) . . . "The people in every land love their rivers. In some countries they are sacred. . . . To none has been given a more beautiful and useful stream than that which sweeps its majestic course from the forests of the Adirondacks, past the cities that line its shores, through the rocky Highlands and by the parapeted Palisades, until it mingles its waters with those of the bay in front of the great metropolis, the very gateway through which by far the largest

HARTMANN

"NOT A WRINKLE AT THE END OF THE TRIP"

THE IDEAL of complete, convenient and constant clothes protection is the inspiration that is responsible for the Hartmann Wardrobe Trunk. In the pursuit of this ideal the Hartmann Trunk Company has dared to be original and held steadfast to its pledge never to compromise with its standards of quality. Thus was Hartmann leadership established.

The Hartmann Padded Cushion Top is patented. It is found only in Hartmann Wardrobe Trunks. Nothing else will absolutely prevent clothes from wrinkling under all conditions of travel.

Owing to unusual production facilities, and organized methods of distribution, Hartmann Wardrobe Trunks represent the greatest dollar-for-dollar trunk value. This is as true of Hartmann Castle-Grande—the only trunk with an all-steel frame, as it is of the Hartmann Gibraltarized Wardrobe. It is as evident in the Hartmann Berth-High Steamer Wardrobe as it is in the latest luggage convenience, the Hartmann Wardrobe Suit Case.

Hartmann Patented Cushion Top Wardrobes range in price from \$30 to \$200. See your nearest Hartmann dealer.

influx of the wealth of the nation, namely, its people, have reached the New World."

The charm and associations of the Hudson are manifold. It is a river of many legends. Its shores were the scenes of battles and important military movements during the nation's early struggles. Its valley was and still is a link in the northern route from New York to Canada, over which have moved untold thousands of Indians, soldiers, colonists and tourists. Its scenery is rich in variety and full of material for the artist.

For many generations travelers have enjoyed the Hudson's attractions from the spacious decks of the Hudson River Day Line steamers. Indeed, there would be something lacking in the Hudson Valley summer without these huge immaculately white vessels appropriately named after some of the great men whose names are stamped indelibly on Hudson River history. Other transportation is provided by well-appointed steamers for night service between New York and Albany or Troy by the Hudson Navigation Company and for other thousands of travelers by the two divisions of the New York Central Railroad which borders either shore-line.

"In the Catskills," says T. Morris Longstreth in his recent description of a tramping trip through these mountains ("The Catskills," Century Company), "one can enjoy an extensive forest, covering a country partly mountainous and partly rolling, a few small lakes, a wealth of running water; a place for camping, or boarding with simple folk, or putting up at expensive hotels. Above all, one has proximity to New York. . . . For the man who must have beetling crags, and whose enjoyment is ruined if there is another man in the same county, there is but little more. But for him who is not blind to one type of beauty simply because he can remember others, the Catskill Mountains and their surrounding hills are rich with a variety of wealth quite unimaginable. Before I visited them I imagined that they were a set of mediocre hills infested by a sandwich-eating summer populace. I found impressive ranges, noble cliffs, forests with game, streams with fish, and I came away with recollections of many cheerful firesides. In no other American vacation-land can one find a more interesting alternation of forest tramping and village living, a richer background of subdued mountain and inviting valley, a more sympathetic native population with finer historic antecedents and more solid qualities."

The Catskills are only a few hours away from New York City's northern exits by the Hudson River Day Line steamers or by two divisions of the New York Central Railroad System. From the west shore of the majestic Hudson, entrance to the Catskills is made at two main gateways. One of these is Catskill, where motor stages provide inland transportation. The other is Kingston, the starting-point of the Ulster

Glacier Park Hotel

Modern Hotels in the Wild Heart of America

Glacier National Park

Go out to the untamed Montana Rockies this summer. Enjoy the old-fashioned forms of recreation in Glacier National Park. Ride horseback—fish—camp—motor—climb mountains. At the end of each perfect day of play find rest and comfort in a big modern hotel or rustic chalet camp.

Summer Tourist Fares Greatly Reduced

The Oriental Limited, new modern Pullman equipment, is a solid steel through train from Chicago, via Burlington Route-Great Northern Railway to Glacier Park, Spokane, Seattle, Portland, Tacoma. Stops at Glacier Park Hotel, —eastern entrance. Also through trains from Kansas City. En route to North Pacific Coast, Alaska or California, visit Lake Chelan and Rainier and Crater Lake National Parks.

Indoors and Out these Rugs are a Joy

"Nothing like Congoleum Rugs for summer-time. They're so easy to keep clean and nothing seems to harm them."

On the porch or indoors—Gold-Seal Congoleum Art-Rugs are surely the ideal summer floor-covering. Their cool, cheery patterns add charm to the seashore cottage, bungalow and mountain camp, and besides they are low-priced and extremely practical. They hug the floor without fastening, never ruffle or turn up at edges or corners.

Water doesn't hurt them. The sun doesn't fade them. No need to roll them up when rain threatens. And they are so easy to clean—it's done in a jiffy with a damp mop.

Truly for the summer home there is no floor-covering so satisfying and economical as Gold-Seal Congoleum Rugs.

VACATION TRIPS AND PLAY- GROUNDS—Continued

and Delaware Railroad, which climbs up into hills of a verdure and variety of contour unsurpassed. From the heart of the Catskills, at Stamford, the vacationist may radiate in divers directions to all points of New York State. Perhaps the most attractive call of the road leads him from Stamford on to the lake region of the Empire State.

A tiny body of water as lakes go, a short distance from the Catskills' western slope, yet bigger than many larger ones in its romantic interest is Otsego, the "Glimmer-glass" of the beloved Fenimore Cooper, on whose shores still lives the spirit of the *Deerslayer*, *Natty Bumppo* and their immortal author.

Vacation attractions in the Central New York region, including the "Finger Lakes;" with their surroundings, Skaneateles, Owassco, Cayuga, Seneca (the largest), Keuka and Canandaigua, provide summer recreation for thousands who enjoy boating, fishing, fresh-water bathing, motoring and attractive scenery. As their very names suggest, these lakes lie in a region rich in Indian lore, tradition and historical association. Near Seneca is that remarkable grotto, now preserved by the State, Watkins's Glen, and nearby also are the famous Glen Springs, whose healing virtues are said to surpass those of European Nauheim.

Through Central New York a novel trip is promised. According to an announcement by State Superintendent of Public Works, Charles L. Cadle, passenger-boats will be operated through the entire length of the New York State Barge Canal this summer, thus reviving a method of travel which has not been in vogue since the early days of American transportation. The trips between Albany and Tonawanda will be leisurely ones, with numerous stops for sightseeing, including a side trip to Niagara Falls and Buffalo.

The idyllic beauty of Lake George and the majestic sweep of Lake Champlain have drawn summer residents and travelers to their islands and shores for many years. Both lakes lie on the ancient route from New York to the St. Lawrence, which includes between Albany and Lake George, New York's world-famous spa, Saratoga, and may be conveniently made a part of the present-day trip from the metropolis to Montreal. Besides the scenic attractions with which each body of water is blest, there are associations, historical and legendary which give added charm. As Max Reid says in his excellent depiction of the history and legend of these waterways in the "Lake George and Lake Champlain" (G. P. Putnam's Sons), "There is no spot on American soil that has witnessed more battles, small and great, battles that were full of significance for two continents,

than the narrow shores of these lakes." On both lakes there still remain many relics of these early days of conflict of intense interest to those who are stirred by the romance and battle of our early history.

The rail and boat schedules are so arranged that a morning train may be taken from Albany over the Delaware and Hudson System, connecting with steamers making the through trip over each lake.

"Despite all modern conveniences, the Adirondack wilderness remains," says T. Morris Longstreth in his excellent depiction of the scenery and spirit of the North Woods in his recent book "The Adirondacks" (Century Company). "Despite the upholstered car, the thermos flask, the automatic fusillader, the mountains furnish humble pleasures that can never be exhausted."

Speaking more particularly of the great Adirondack State Park which includes all the worth-while scenery of the central mountain region: "There are 600 miles of lake line to choose your camp site from. There are about 1,450 lakes and ponds, and nobody knows how many hills and mountains in the Park. You have about 4,000,000 acres to roam over within limits, and the average altitude is about 2,000 feet, high enough for a change, not high enough to over-exhilarate. You have about 16 rivers to paddle on and thousands of little streams to fish in. There are about 50,000 deer to watch, and you won't be shot while watching them, for the law requires the hunter to see horns three inches long before he shoots. The woodcock, pheasants, ducks, quail are increasing. There are about forty kinds of quadrupeds you can set your restless children to observing; and when they know all those, there are a hundred varieties of birds. There are hundreds of miles of excellent motor road and dozens of good hotels; yet there are places still inaccessible except to those who are willing to undergo much toil for much pleasure. There are three great routes, each over a hundred miles long, two of them for canoe, that will prove the extent, the wildness, and the beauty of this Park which it is your privilege to enjoy.

"Whether it be lakes, rivers, shadowy valleys or majestic peaks that appeal to the vacationist, the Adirondacks are satisfying. The Fulton Chain, Raquette, Blue Mountain, Tupper, Saranac, Placid, Cranberry, St. Regis and Chateaugay are among our loveliest inland waters. The Keene Valley, Wilmington Notch, Avalanche Pass, and Ausable are rich in picturesque charm. Tahawus, McIntyre and Whiteface are not of enormous elevation but eminently impressive, and then there are those leaping rivers and streams, the young Hudson, the Ausable and Saranac and scores of others, a delight to the angler."

The Adirondack region is surrounded by two rail systems, the Delaware and Hudson and New York Central. The former reaches the gateways at North Creek, Lake George, Ticonderoga, Port Henry, Westport, Port Kent, Plattsburg and Chateaugay, Saranac and Lake Placid. The latter provides access with Northville in the Southern Adirondacks through connections at Fonda, and via its divisions from Herkimer or Utica to Old Forge,

Raquette Lake, Tupper Lake, Saranac, Placid and St. Regis Lakes.

VALLEYS AND SUMMITS OF THE ALLEGHANIES

It is a long flight from Mt. Pocono to "The Land of the Sky" in western North Carolina, yet all along this sweep of the Alleghanies and their neighboring ranges are summer playgrounds of many and varied attractions.

John W. Harshberger, Ph.D., says in the Geographical Society of Philadelphia Bulletin: "No region in eastern Pennsylvania has greater natural beauty and a wider diversity of national features than the elevated Pocono Plateau, which attracts a larger class of nature lovers each year. Topographically, the table-land is elevated 2,000 feet above sea level . . . the plateau is threaded by numerous water courses, which cut deeper and deeper into the geologic formations, as the edge of the table-land is approached, until one stands at a place where deep mountain valleys lie between high mountain ranges with the long almost gapless Kittatinny Mountain range in the hazy distance."

The huge mountain gorges at The Delaware Water Gap, Mauch Chunk and White Haven have been long in favor among summer vacationists.

Continuing south we come to valleys and mountains of great charm. Says Horace Kephart in "Our Southern Highlanders" (Outing Publishing Co.), "South of the Potomac the Blue Ridge is a narrow rampart rising abruptly from the east, one or two thousand feet above its base, and descending sharply to the Shenandoah Valley on the west. These mountains, from the Potomac through to the Tennessee border, consist of a multitude of narrow ridges with steep escarpment on both sides . . . and deep, slender dales.

"In Southwestern Virginia the Blue Ridge and the Alleghanies coalesce, but soon spread apart again, the Blue Ridge retaining its name, as well as its general character, altho much loftier and more massive than in the north."

Parts of this region offer many attractions for horseback or camping trips. To continue from Mr. Kephart's description:

"The back country [western North Carolina] is rough. No boat nor canoe can stem its brawling waters . . . here is a land of lumber wagons, and saddle-

Spend Your Vacation In the Land of Jacques Cartier

Here are Thrills—Here is Romance and Adventure—that Will Take You Back to the Days of French Occupation.

Shooting
the
Rapids

Landing
at Old
Quebec

Ste. Anne
de Beaupré

Resting
awhile at
Tadousac

The
Glorious
Saguenay—
River of
Mystery

THIS year pack your vacation with interest and variety. Here, indeed, are thrills and adventure; an everchanging panorama of charm and beauty on the trip from "Niagara to the Sea."

Breasting the waves on Lake Ontario's broad expanse; threading your way through the Thousand Islands of the historic St. Lawrence River; shooting the Rapids the dusky red men descended in their bark canoes.

You stop at Montreal; then Quebec, where an hour's trolley trip will take you to the miracle-working shrine of Ste. Anne de Beaupré; then Montmorency Falls, 100 feet higher than Niagara.

From Quebec you continue your voyage down the majestic St. Lawrence towards the Sea, stopping at beautiful Murray Bay; then Tadousac, at the foot of the Laurentian Mountains, where you begin your journey up the far-famed Saguenay, with its stupendous capes, "Trinity" and "Eternity," above which the wheeling eagle is but a speck against the blue.

Throughout the trip history unfolds a story rich in memories of the past. Romantic scenes remind you of the heroes of a bygone age.

Can you afford to spend your whole vacation in any one place when such rich entertainment is within your reach?

Send 2c stamp for illustrated booklet, map and guide, "Niagara to the Sea," including rates, etc., to John F. Pierce, Passenger Traffic Manager, Canada Steamship Lines, Ltd., 115 C.S.L. Building, Montreal, Canada.

*A thousand miles of travel—
A thousand thrills of pleasure*

VACATION TRIPS AND PLAY- GROUNDS—Continued

bags, and shakily little sleds that are dragged over the bare ground by harnessed steeds. . .

In the Virginias are those famous resorts among the oldest in our country, Virginia Hot Springs and White Sulphur Springs. Mr. William Alexander MacCorkle says in his book, "The White Sulphur Springs" [West Virginia] (Neale Publishing Co.), "here is a land of surpassing mountains, sweet pastoral scenes, waving grass, beautiful streams, azure skies, a land studded with marvelous elms; a land of soul-touching beauty."

In western North Carolina is that high altitude region designated "The Land of the Sky" of which Asheville is headquarters.

In the book, "Western North Carolina" (A. L. Chatterton Pub. Co.), H. P. Gatchell, M. D., says, "No other spot combines so fine a climate, an air so pure and invigorating and scenery so charming and picturesque."

"Between the Blue Ridge and the Great Smoky Mountains," says John T. Faris in his "Seeing the Sunny South" (J. B. Lippincott), "is a labyrinth of brawling brooks and leaping rivers that come from the springs on the mountain-side, flow restlessly along valleys and forges, and force their way through rocky barriers in titanic gaps."

It is impossible here to describe all of the summer playgrounds within the great Alleghany System or the many routes which reach them. Mt. Pocono, the Delaware Water Gap and their environs are on the Lackawanna Railroad. Maunch Chunk is reached by the Lehigh Valley and the Central Railroad of New Jersey. Mt. Gretna, Pa., is on the Pennsylvania System. Blue Ridge Summit on the Western Maryland; Berkeley Springs on the Baltimore & Ohio; Virginia Hot Springs and White Sulphur Springs on the Chesapeake & Ohio; and Asheville gateway to the western North Carolina Mountain regions on the Southern Railway System.

COASTWISE TRIPS, SHORT OR LONG

For those who are unable, or do not care to cross the ocean, yet who enjoy salt-water trips, there is a selection of routes along both coasts offering an attractive variety of voyages. These range from overnight sails between such ports as New York and Boston, or San Francisco and Los Angeles to a five-day one-way cruise from New York to Quebec or twelve days for the round trip, a twelve-day cruise to Newfoundland and return, or a sixteen-day cruise to the Caribbean, or a month's voyage from New York to San Francisco via the Panama Canal. Summer trips on the southbound passenger-ships are becoming more and more popular. Rates are, in some instances, less than in winter, and when one considers that in the summer months the temperature averages approximately the same as in the winter, and there is freedom from humidity and hot winds experienced in the United States, these summer voyages in southern seas are really delightful. Wind movements during the summer are almost continuous and during sightseeing trips ashore the Caribbean "Doctor," as the daily trade wind is called, insures comfort. A complete table of routes is given on the next page.

Fastest time to Rio and the Centennial Exposition

Are you going? Will you be one of the thousands who will join in the gigantic world celebration of Brazil's 100th year as a Republic?

Every part of the world will be represented there, France, Great Britain, Italy, Belgium, and our own United States. They will all have exhibits there and will join in the study of the fast developing business opportunities of South America.

If you are going, write now and let your Government tell you of its swift new ships which have brought South America 5 to 7 days nearer. These new ships—21,000 ton oil-burners—owned by the U. S. Government, sail from New York fortnightly. Rio de Janeiro is now only 11 days from New York. Montevideo and Buenos Aires are but a few days beyond. South America's treasure chest of pleasure and business opportunities is brought almost to your door.

These splendid new ships are operated for the U. S. Government by the Munson Steamship Lines with 50 years of successful steamship experience.

They are among the finest ships afloat, with spacious staterooms equipped with beds, not berths, electric fans, running water, bed reading lamps. Most have private baths.

For information regarding accommodations, address
The Munson Steamship Lines
 67 Wall Street, New York City

Next sailings are
 S. S. American Legion . . . June 10th
 S. S. Pan America . . . June 24th
 S. S. Western World . . . July 8th
 S. S. Southern Cross . . . July 22d
 Fortnightly thereafter

Write for Booklet

Your Government wishes the name of every prospective traveler. If you are considering an ocean voyage anywhere, send the information blank now—no matter when you intend to go. Name	Location	Nearest Rail Stations	Characteristics
Lafayette	Mt. Desert Island.	Mt. Desert Ferry, Maine Central Syst.	Forest-clad mountains, picturesque bays, superb seascapes.
Hot Springs	Central Arkansas.	Hot Springs, Rock Island & Missouri Pac. Systems.	46 medicinal springs, with a total flow of 800,000 gallons daily, with 20 bath-houses under public control.
Platt	Southern Oklahoma.	Sulphur, Okla. Santa Fe System and Frisco Lines.	Numerous sulfur and non-mineral springs in mountainous region of scenic attractions.
Sully's Hill	Northeastern North Dakota.	Devils' Lake, N. D., Great Northern R'y and Soo Line.	Region of forest and stream, south shore Devils' Lake, an important wild-animal preserve.
Wind Cave	In Black Hills Southwestern South Dakota.	Hot Springs, S. D., Burlington and Chicago & N'western routes.	Containing a cavern with miles of galleries and many chambers of marvelous natural formations.
Rocky Mountain	In the Rockies of north middle Colorado.	Boulder on Denver & Interurban and Colorado & Southern; Longmont, Burlington Route and Colo. & South.; Lyon's on Burlington; Loveland on Colo. & South.; Fort Collins on Union Pacific and Colo. & Southern.	In the heart of the Rockies, with peaks 11,000 to 14,000 feet, living glaciers, lakes, rivers and canyons.
Yellowstone	Wyoming, Montana and Idaho.	Gardiner Northern Pacific; Cody Burlington Route; West Yellowstone, Union Pacific.	Containing more geysers than in all the rest of the world combined, boiling springs, mud volcanoes, petrified forests, canyons, lakes, cataracts, forests teeming with wild life.
Glacier	Northwestern Montana.	Glacier Park Station and Belton, Mont., on Great Northern Railway.	A region of mountain grandeur with 250 glacier-fed lakes, 60 glaciers, precipices thousands of feet deep, innumerable streams, dense forests.
Mesa Verde	Southwestern Colorado.	Mancos, Colo. Denver & Rio Grande System.	Among America's most notable and best preserved prehistoric cliff dwellings.
Grand Canyon	North Central Arizona.	Grand Canyon Station Santa Fe System; North Rim motor stage from Lund, on Union Pacific.	The world's most sublime and awe-inspiring chasm, stupendous in proportions, magnificent in colorings, fascinating in its lights and shadows—a masterpiece of scenic wonder.
Zion	Southwestern Utah.	Lund, Utah, Union Pacific System.	A gorge of from 800 to 2,000 feet depth, its precipitous walls resplendent with brilliant colorings.
Sequoia	Middle Eastern California.	Exeter or Visalia, Cal., Santa Fe and Southern Pacific.	The Big Tree National Park—12,000 Sequoias more than 10 feet in diameter, some 25 to 35 feet.
General Grant	Middle Eastern California.	Fresno, Sanger, or Visalia Santa Fe or South. Pacific.	Created to preserve the giant tree "General Grant," 25 feet in diameter, and many other forest monarchs.
Yosemite	Middle Eastern California.	Merced on Southern Pacific and Santa Fe Systems, thence to El Portal.	A valley of surpassing scenic beauty with lofty cliffs, towering waterfalls, crystalline lakes, groves of big trees.
Lassen	Northern California.	Red Bluff, Cal. on Southern Pacific.	Contains Mt. Lassen, 10,465 feet, only active volcano in the United States proper.
Crater Lake	Southern Oregon.	Medford or Klamath Falls, Ore., Southern Pacific.	An opalescent lake, walled by snow-capped mountains, filling a prehistoric crater.
Mt. Rainier	West Central Washington.	Ashford on Chicago, Milwaukee & St. Paul.	From the great mountain radiate 28 glaciers, 48 square miles of these 50 to 500 feet thick. Sub-Alpine flora.
Mt. McKinley	South Central Alaska.	Mt. McKinley Park Station U. S. Alaska Railroad.	Three thousand square miles of untouched nature over which towers Mt. McKinley, highest American peak.
Hawaii	Hawaiian Islands.	Inter-island steamers from Honolulu.	Three separate areas including three world-famed volcanoes, Kilauea and Mauna Loa on the island of Hawaii and Haleakala on the island of Maui. Kilauea is continuously active with spectacular molten lava lakes; Mauna Loa is largest active volcano in the world; Haleakala has probably largest of all known craters.

	Sunset Route from New Orleans (direct steamships from New York) to California and Pacific N. W.; Southern Pacific System.	Spanish America, Apache Trail and Roosevelt Dam, Carisso Gorge, Sequoia and General Grant Parks, Yosemite Valley, connecting with Shasta Route for Pacific Northwest.

Elto Light Twin Outboard Motor

Sportsmen Everywhere Are Talking About It

The Elto Light Twin is causing a big stir in the outdoor world. It is even a bigger sensation than Ole Evinrude's first outboard motor built 14 years ago.

Sportsmen everywhere are talking about the Elto. They had looked to the "Father of the Detachable Motor" for a highly developed motor of this type and they welcome this great advance in the industry with genuine enthusiasm. From all parts of America and foreign shores, letters are coming to Ole Evinrude's new organization highly commending the Elto Light Twin for its original and practical features.

Advanced Design

The Elto is a twin-cylinder and develops full 3 H. P., yet it weighs only 48 pounds. It is a rugged, long-life motor, built thruout with extreme precision.

Other notable Elto features are its quick, easy starting, vibrationless running, automatic tilting, folding rudder comfortable steering from any part of boat, perfect trolling speed, quiet underwater exhaust, oil-tight gear housing. The Elto is the utmost in outboard motor beauty and utility. Its many distinctive features are quickly winning recognition for it is the outboard motor masterpiece.

Write Ole Evinrude's new organization for descriptive literature and name of the Elto dealer nearest you. Dealers: Write today for outline of sales plan.

Pikes Peak and Jefferson Highways

JH

From Sunny South to Northern Lakes,
From East to Scenic West,
Broad highways for your motor car
Invite vacation's quest.

WHERE to go—what to see—mileage—data. Scores of cities on two through highways have joined to give you touring information along well-defined and clearly-marked roads. Full information by addressing either the Pikes Peak Ocean-to-Ocean Highway or the Jefferson Highway—both with headquarters at St. Joseph, Mo.

In the Land of Indian Legend

Get out into the Indian country. You will find traces of red-skins far more thrilling than the tales of Hiawatha. Westward from the field of Custer's last battle, through Montana, Idaho and along the Columbia River Highway, are interesting reminiscences.

Northern Pacific Ry.

"2000 Miles of Startling Beauty"

is the route of history. Again and again do the tracks cross the old Lewis and Clark Trail, following it at times hundreds of miles. Three Forks of the Missouri, Bitter Root Valley, Clark Fork River and many other points on the main line of the Northern Pacific, play a permanent part in the story of the wonderful first Expedition through the Northwest in 1804-06.

\$86 Round Trip—Chicago to North Pacific Coast

Go fishing in the deep lakes of Idaho and Montana. Climb snow-covered Mount Rainier. Camp out in Paradise Park. Get off the beaten track, see places of special historic or scenic interest. Enjoy Puget Sound and Lake Washington.

From Chicago — North Coast Limited — All-Steel Through Train

Stop at Yellowstone Park

Write for free books—as fascinating as fiction.

VACATION TRIPS AND PLAY-GROUNDS—Continued

TRIPS ON THE GREAT LAKES

Speaking of our inland fresh water seas, Frederick A. Talbot in his "Steamship Conquest of the World" (J. B. Lippincott Co.) says:

"A cruise around these Great Lakes has developed into as popular a holiday among Americans and Canadians as a trip to the fjords of Norway or the Mediterranean is among Europeans, while many transeontinental travelers welcome two days on these waters as a pleasant interlude to the 4,000 miles of railway ride from the Atlantic to the Pacific seaboard."

Along their shores are many delightful vacation centers and points of unusual interest. There is Cleveland, one of the handsomest of American cities; Detroit with its waterside parks and huge motor factories; the island labyrinth of Georgian Bay; Mackinac with its scenic and historical charm; the great locks at Sault Ste. Marie; scores of resorts along both shores of Lake Michigan and Lake Superior. A table of Great Lakes Routes is given elsewhere.

SELECTED BOOKS ON GREAT LAKES REGION

Sketches in Duneland, Earl H. Reed, Dodd, Mead & Co., \$3.00.
Tales of a Vanishing River, Earl H. Reed, Dodd, Mead & Co., \$4.00.
The Sand Dunes of Indiana, E. Stillman Bailey, A. C. McClurg & Co., \$2.50.

Chicago and Old Northwest, Milo Quaife, Univ. of Chicago Press, \$4.00.

MINNESOTA'S SPORTSMEN'S ELYSIUM

Easily accessible for week-end trips from Chicago are a series of lake resorts in Wisconsin much in favor with residents of the Middle West. Boating, bathing and fishing are enjoyed at such popular resorts as Geneva Lake, Lake Winnebago, Fox Lake, Green Lake, Zurich, Mendota, Beaver and a multitude of smaller ones.

If we continue, however, farther northwest to St. Paul or Duluth, we find east and north of the Mississippi Valley the labyrinth of lakes, lakelets and intersecting waters which are designated as the Ten Thousand Lakes of Minnesota, an elysium for the canoeist, camper and fisherman who delights in leaving the beaten paths.

"It is a real wilderness," writes the editor of *Outing Magazine*; "make no mistake about that. If solitude is your key to happiness you can travel for days without seeing another human face or coming within sound of a locomotive whistle. You can be as strenuous or as lazy as you like—work twelve hours a day or loaf and invite your soul. And all around will spread the serene difference and peace of the North Woods."

The main points of entry are by way of Duluth or St. Paul. Details of the above routes with fish and game regulations and special advice to campers should be obtained from the Minnesota Land and Lake Attractions Board of St. Paul.

True Amount
of Oil Right Be-
fore Your Eyes!

YOU can't afford to
go a day without it

Paul R. Vincent, Holyoke, Mass., says: "Your oil gauge has proven satisfactory in every way; it is easy of installation, it is accurate, and—the best point it gives you the assurance that your motor has the right amount of oil, at a glance. To one who has had to stop and watch the oil drip from a petcock it is a necessity, not an accessory."

Dr. F. R. Coe, Warner, N. Y., says: "It is worth three times the price you ask for it. It should be placed on every Ford car."

CARTER OIL GAUGE

fastens to instrument board or dash; connecting air tube with special elbow screws in place of lower petcock. Gauge indicates plainly amount of oil in crankcase—at all times, under all conditions. No oil passes through tube or gauge. No moving parts, floats, corks or plungers. Cannot get out of order. Soon pays for itself in oil saved.

VACATION TRIPS AND PLAY- GROUNDS—Continued

**THE COLORADO AND NORTHERN
ROCKIES**

Of the Colorado Rocky Mountain region, which is within easy access from Denver and Colorado Springs and the northern part of the same range intersected by the northern transcontinental railways, the late Lord Bryce, in probably his last writing, appearing in a recent issue of *The National Geographic Magazine*, says:

The Colorado Rockies have one feature of unsurpassed grandeur. What the hills do not give is given by the valleys. The deep and extremely narrow ravines which intersect the mountains, enclosed by precipitous walls thousands of feet high, with nothing at the bottom but a roaring stream and sometimes a road, or a railway carried on a shelf cut out of the face of the precipice—these have sometimes a grandeur and sometimes a picturesque variety of views up and down the winding glen unsurpassed in any part of the Western Hemisphere.

The so-called Royal Gorge of the Arkansas River, just where it issues from the mountains west of Pueblo, is perhaps the most tremendous in the sternness of its crags and pinnacles, but there are others hardly less wildly grand.

North of Colorado the range of the Rockies sinks, but some high peaks occur in northwestern Wyoming, and the scenery of the Yellowstone Lake and Yellowstone Canyon, with its splendid waterfalls, as well as that of the Geyser Basins, is extremely interesting.

Still further north, on the frontier line between the State of Montana and Canada, lies a district of great beauty, with snow-covered peaks, occasionally bearing small glaciers and picturesque lakes filling some of the valleys. Here the creation of a national park has happily provided for the preservation both of the scenery and of the wild animals.

From this point, where the Canadian Rockies begin, the tourist finds plenty of fine scenery for hundreds of miles to the north.

**SELECTED BOOKS ON THE ROCKY
MOUNTAIN REGIONS**

History of Rocky Mountain Exploration, R. G. Thwaites, D. Appleton & Co., \$2.00.
Highways and Byways of Rocky Mountains, Clifton Johnson, The Macmillan Co., \$2.75.
Colorado: the Queen Jewel of the Rockies, Mae Lacy Baggs, The Page Co., \$6.00.
Hunting in High Altitudes, G. B. Grinnell and Theodore Roosevelt, Harper & Bros., \$3.00.

**IN THE SIERRAS AND THEIR
PICTURESQUE VALLEYS**

Quoting again from Viscount Bryce's article referred to in the foregoing:

From the Rockies let us turn westward across the Great American Desert to the parallel range of the Sierra Nevada in California. As its name conveys, it carries perpetual snow, but not enough snow to support glaciers, tho these may be found in its prolongation into Oregon and Washington, where it bears the name of the Cascade Range.

The canyons, however, are of extraordinary beauty, sometimes, as in the Yosemite Valley and the Kings River Canyon, presenting forms of singular grandeur. It would be hard to find anywhere scenery more perfect.

Hudson River by Daylight

DON'T miss it this year!—the most delightful inland water trip on the American continent. Inspiring views of lofty headlands; beautiful shore vistas; points of historic interest. A new thrill at every turn. And the chance to speed over cool, sparkling waters on one of the famous fleet of five

CALIFORNIA IN SUMMER

California is and probably will ever be the final objective of the transcontinental traveler. National Parks, National Monuments, the scenic wonders of mountain and desert may hold his interest en route, but like the pioneers of old the magnet of the Golden State draws him on to the very shores of the Pacific.

It is only to those who have never visited California that her playgrounds are regarded as seasonal. Indeed, as Charles Francis Saunders says in his "Finding the Worth While in California":

"Among the permanent residents it is a moot question whether winter or summer in California is the more agreeable season. Each has its good points, but a great deal depends upon the part of the State one is talking about. Relation to the sea is an important factor. The ocean exerts a modifying effect upon the temperature wherever its influences reach, and such sections are on the whole the pleasantest at all seasons."

And as another writer on the same subject says: "For fifty summers Californians who live by the sea have gone to the mountains and those in the interior have migrated to the sea."

Again quoting Mr. Saunders,

"Even during the summer months, tourists will do well to keep a light wrap at hand, particularly at the beaches, where a strong wind from the sea is a regular afternoon occurrence."

With its wide range of latitude and its altitude varying from sea level to snow-capped peaks of fourteen thousand feet, the playgrounds of California are among the most varied in America. From the mountain forest of the Yosemite Valley, to the orchard-lined valleys of the south central regions and the broad sea beaches of the coast-line, there is nowhere monotony.

The National Parks within California, Yosemite, Lassen, Sequoia and General Grant, described briefly in the table elsewhere, are among the most interesting and unusual of our public reservations.

Then there are those monuments of historic interest, the ancient missions, visits to which lend charm to the California trip.

Along the coast stretches the vast Pacific Riviera with its world-famous ocean beaches, Coronado and Santa Monica, and scores of others with that famous chain of oceanside towns, including Santa Barbara, Carmel and Monterey. There is Santa Catalina Island, a short sail offshore from Los Angeles Harbor, a favorite trip with California tourists.

Then there are those cities unlike any others, San Diego with its Spanish "old town," Los Angeles, "the tourist capital," and cosmopolitan San Francisco where the ships and races of the world meet.

These are only the most fragmentary hints of the riches California possesses for the summer tourist, attractions that make California an essential in the Western itinerary. For books on California, see page 71.

A Strange Idea for a summer trip

By AN EASTERNER

"See a new country, a wonderland of summer. Get a complete change of scene (often the most valuable part of a vacation).

"Be entirely absorbed and self-forgetful. Come back a new man."

That was the advice of my physician seven years ago when I felt in need of real rest and recreation. And then he said what I thought a *strange thing* at the time—"Go to Southern California this summer."

"What!—from one warm place to a warmer?"

"You don't know California in the summer," he replied. "It's cool there."

And then he showed me these U. S. Weather Bureau figures:

Average mean temperature for Southern California: June, 66 degrees; July, 70 degrees; August, 71 degrees; September, 69 degrees.—The 41-year record of the U. S. Weather Bureau.

Well, I went—somewhat doubtful—and this is what I found:

That he and the U. S. Weather Bureau were right about the summer weather. I stayed three months—June, July, and August—and slept under blankets ninety nights.

I found a land that offered an amazing variety and quality of summer sports.

4,000 miles of motor roads through some of the roughest kind of country in some places, that I have ever seen, yet paved like city streets.

Great sea shore resorts, mountain lakes and fishing streams, deserts, and the most intensively developed farm and fruit lands bordering on one another.

Stupendous views from mountain tops, great rides along fine ocean-side highways, almost impenetrable wildernesses within a few hours of a great city, tenth in size in the United States.

Golf and tennis everywhere. A myriad things to do. The result is I have missed only one summer in the seven since I first learned of this great playground.

GO NOW

Don't put off a trip like this, don't hesitate. Go while you can. *The complete change* alone is worth the comparatively small investment. This trip is an investment that yields incomparable returns.

If you wish to take "a trip abroad," here's one in your own United States.

Stay at fashionable hotels or modest boarding places, as you wish.

Your railroad ticket agent will give you complete information. Or send coupon to us for a free book that tells more than we have space here to relate.

Every Shaft Is First Quality

This cannot be said of hickory, for hickory varies. Two golfers playing with hickory shafted clubs have not the same opportunity, for one may have first quality hickory and the other fifth quality. But when two golfers play with Bristol Steel Shafted clubs, they have the same opportunity, for Bristol Steel Shafted clubs are all of the same quality—equal to first quality hickory.

Notice: Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

Bristol
TRADE MARK REG. U.S. PAT. OFF.
Steel Golf Shaft
Patented Nov. 22, 1910 Oct. 3, 1911
May 12, 1914 May 2, 1916

The Bristol Steel Golf Shaft is lighter than hickory. This brings the weight lower, thus making a better balanced club. It is unquestionably stronger and more durable. It cannot rust and the "whip" always stays the same.

Get one new Bristol Steel Shafted club from your "Pro" or have him attach a Bristol Steel Golf Shaft to one of your old heads. If your "Pro" is unable to supply you, send your order direct to us. State length and if stiff or whippy shaft is desired.

Write for descriptive circular giving us the name of your club and professional.

Professionals: Write for Directions for Fitting Bristol Steel Golf Shafts to Old Heads.

Golf Shops and Sporting Goods Dealers: It will pay you to investigate immediately this new development in golf.

Golf Clubs fitted with Bristol Steel Golf Shafts can now be supplied by The Crawford, McGregor & Canby Co., Dayton, Ohio, and The Hillerich & Bradsby Co., Louisville.

THE HORTON MFG. CO.
263 Horton St., Bristol, Conn.

Kingfisher Silk Fishing Lines

There are no better fishing lines made. Kingfisher Silk Fishing Lines catch more fish, win more prizes, give more satisfaction than any other lines. There is a Kingfisher Line for every kind of fishing. Every one is guaranteed perfect.

If you like fishing, you will also be interested in Bristol Steel Fishing Rods and Meek and Blue Grass Reels.

Bristol, Meek and Kingfisher Fishing Catalogs will be sent free upon request.

VACATION TRIPS AND PLAY- GROUNDS—Continued

THE PACIFIC NORTHWEST

"The Pacific Northwest," says Logan Marshall in "Seeing America" (John C. Winston), is a region of beautiful mountains, broad rivers and fruitful valleys. . . . To the east beyond the Cascade Mountains the climate is similar to that of Maryland or the famous valley of Virginia, colder in winter and warmer in summer than that of the western section, but pleasant and healthful everywhere—a climate productive of growth and vigor, health, energy and success. The mountain-tops ever in view, are always snow-covered . . . while heat prostrations of mid-summer work havoc in eastern cities. . . . people in this country work all day in comfort and at night draw their blankets closely around their shoulders, thankful for the rest they can enjoy."

Notable among the varied attractions of this region are its superb cities. Vancouver is the commercial center of British Columbia and one of the most important seaports of the North Pacific. Its neighboring city, Victoria, is noted for its beautiful surroundings and English flavor. Indeed, as Archie Bell says in "Sunset Canada—British Columbia and Beyond" (The Page Company), "Victoria boasts that it has in its gardens every variety of flower that will bloom in England—and many others."

Seattle is the hub from which radiate trips to surrounding playgrounds offering varied recreation attractions. You may board a steamer for the Puget Sound Archipelago with its wooded islands and sea-bathing and fishing. Elsewhere four eighteen-hole courses await the golfer. You may motor over magnificent highways to Chelan Lake, resting between snowcapped peaks, to Lake Creseent in the Olympics, or dozens of smaller lakes where trout and bass abound. Mt. Rainier National Park, with its white peak towering 14,408 feet, is a few hours' ride via Tacoma.

The city itself, one of the best examples of American civic enterprise, has a remarkable setting. Fronting a deep salt-water port it has behind it a fresh-water harbor in Lake Washington, and always to the east and south a phalanx of snowcapped peaks.

Seattle is an important transeontinental rail center. Four American transeontinental railroads, the Chicago, Milwaukee & St. Paul, Great Northern, Northern Pacific and Union Pacific, have western terminals here. The Southern Pacific (Shasta Route) and Burlington systems has through passenger service, while Seattle is the western American terminal of the Canadian Pacific and the Grand Trunk Pacific systems through steamer connection with Vancouver. Steamship routes to or from Seattle are listed in table elsewhere.

Portland, "the city of roses," of which Ruth Kedzie Wood, F.R.G.S., writes in

The Quick, Clean Way To Do Your Camp Cooking

GET out your Kampkook, remove the cover and light up. In two minutes you have a hot, blue gas flame; coffee steaming and bacon sizzling in less time than it takes to gather fuel for a wood camp fire. Kampkook makes its own gas from the same grade of gasoline you use in your car. Easy to light, windproof, safe

anywhere. Most experienced tourists and campers cook the Kampkook way because it enables them to prepare a hurry-up lunch or a big meal anywhere, as quickly as in the home kitchen. Kampkooks are sold by dealers in sporting goods everywhere. Write for folder on our complete line of Kampkooking Appliances.

KAMPKOOK No. 3
Price in the U. S. \$7.50.
Also made with brass case at \$9.50; large size two burner \$8.50; three burner model \$12.00.

IT'S ALL INSIDE

All Kampkooks fold up like a miniature suit case when not in use with all parts packed inside case, protected against loss or breakage.

Albert Lea,
Minnesota

"The Tourist's Northwest" (Dodd, Mead & Co.): "A city without a shabby quarter, an alley or a blighting street," is another important rail center and ocean port. Just outside her gates begins that perhaps greatest of our scenic drives, the Columbia River Highway.

"Tacoma," says Ruth Kedzio Wood, F.R.G.S., in her book quoted above, "has a dozen sobriquets bestowed by prophets and advisers. Let another be added: the City of the Mountain."

It is the gateway to Mt. Rainier National Park and has the same glorious background and foreground as the other coast cities of this Northwest country. A complete table of rail routes to the Pacific Northwest will be found elsewhere.

THE TRIP TO ALASKA

Among all summer journeys few are richer in the unusual than a trip to Alaska. In scenery it has no duplicate on the North American continent. As Agnes Rush Burr says in her excellent book, "Alaska, Our Beautiful Northland of Opportunity" (The Page Co.)—

"From almost the time one starts Alaska-ward, there is a succession of snowcapped mountains, a succession of glaciers. . . . There are waterfalls innumerable, lacing mountainsides with slender lines of silvery loveliness amidst the deep green of spruce, or leaping in great foaming torrents from craggy mountain brows to glistening gray boulders, and filling the air with the thunder of their voice and the radiant glory of their rainbows. There are silent fiords lying placid under gray mountain walls; deep, dark canyons through which rivers boil over rocks and rapids. There are great stretches of pleasant valleys filled with grasses and slender, arrow-tipped spruce. And everywhere are wild flowers. . . . Seemingly every blossom that nature has made grows here in a profusion that covers the landscape with color and fills the air with fragrance."

Besides the incomparable scenery there is on every hand in Alaska the spirit of a new land. W. B. Greeley, Chief of the United States Forest Service, writing in "The Outlook," thus describes it:

"Alaska is the last of the American frontier. Alaska is the only place left where 'trails run out and stop,' where people are killed by bears, where unmapped ranges challenge the explorer. In Alaska we are reliving the absorbing story of the West. We see as on the screen the single-handed enterprise of the frontiersman living on the present and the moneyed interest intrenching for the future, men who create industries and men who play with forests, mines, or water-power as with poker chips. It is the story of Idaho or California retold."

Many itineraries are available for the Alaska tourist. The cruise to or from Alaskan ports through the Inside Passage is a wonder trip in itself. But to plunge into the interior country is to experience far more unusual impressions.

Two points of ingress to the interior are available to tourists, Skagway, terminus of the White Pass and Yukon rail line or Seward at the head of Resurrection Bay

Unexcelled as tank material for acid or alkaline solutions

THIS battery of ten Redwood tanks was installed at the plant of the Anaconda Copper Company, Anaconda, Montana, in 1915. Each tank is 50 ft. in diameter and 14 ft. deep. This equipment has a capacity for leaching 2,000 tons of copper per day.

The steel tank hoops are covered with lead pipes to protect them against corrosion in case of any leakage of the strong solutions contained in the tanks.

Redwood is preferred for tanks because it resists fungus and other

forms of rot and decay. This unusual characteristic is due to a *natural*, odorless preservative which permeates the wood fibre during the tree's growth. It explains the long service Redwood gives under all conditions of exposure to acids, alkalies, moisture, severe climatic conditions, fungus and insect activity.

In every industrial center are established tank manufacturers prepared to give immediate prices and service in the erection of Redwood tanks.

Write our New York or Chicago office for our "Engineering Digest", our "Construction Digest" and any other information about Redwood you desire.

**VACATION TRIPS AND PLAY-
GROUNDS—Continued**

where begins the U. S. Government Alaska Railroad. This summer, owing to withdrawal of passenger-steamers on the Tanana River, it will not be possible to make the great circle trip inland between either of these ports.

The Skagway entry begins after a four- or five-day voyage from Seattle or Vancouver or two days from Prince Rupert through the Inside Passage which impressed John Burroughs as "probably the finest scenery of the kind in the world to be seen from the deck of a ship."

After debarking at Skagway, train is boarded on the White Pass and Yukon rail line climbing the precipitous sides of White Pass Canyon made memorable in the gold stampede of '97 and '98. Through tunnel and across dizzy bridge the line finally reaches the summit at White Pass, where it enters British territory. Skirting the shores of Lake Bennett the train stops at Carcross where the traveler may leave it for the Atlin Lakes trip.

"Tho" (to quote again Agnes Rush Burr) "not in Alaska, geographically speaking, the trip to Atlin, which begins here at Carcross, is part of an Alaskan itinerary and is taken by almost every tourist to the Northland, so well known has this lake become for its unusual attractions . . ."

From Carcross a steamer carries the tourist over Nares and Tagish Lakes and Taku Arm to a short rail portage, thence across Lake Atlin to the excellent inn at Atlin. This lake, eighty miles long, set among snowcapped mountains with the mighty Llewellyn Glacier near by, is transcendently beautiful "and" as Miss Burr continues, "the days passed under the spell of its enchantment are among the most delightful of the trip to the north."

Returning to Carcross the rail trip continues along river, lake and through canyon to White Horse on the Yukon. Here, the traveler boards a river steamer for the forty-hour sail of more than 400 miles through superb scenery to Dawson, that picturesque gold center of yester-year. From here it is necessary this summer, owing to withdrawal of steamer service between Dawson, Tanana and Fairbanks, to return to White Horse, thence direct by rail to Skagway.

The other gateway to interior Alaska is at Seward, the southern terminus of the nation's new railway, stretching 467 miles through the heart of Alaska to Fairbanks, destined some day to be one of the commercial capitals of the Territory.

This triumph of difficult engineering, costing about fifty-six million dollars, is of momentous importance in opening Alaska to the outside world. As the New York *Herald* says:

"In passenger transportation a two-week dog-sledge journey has been reduced by the

railroad to a comfortable twenty-four-hour ride. This will mean in the not distant future a large tourist travel. The impressive grandeur of the scenery all along the route is alone enough to insure this."

The Alaska Engineering Commission under whose jurisdiction the road is being completed thus sums up its attractions:

"Seward on beautiful Resurrection Bay, surrounded by picturesque mountains, forests, and trout streams; Spenceer Glacier with its vari-colored ice masses pushing down within a few hundred yards of the railroad; Anchorage—at the head of Cook's Inlet—the railroad headquarters and outfitting point for many trips of interest; Mount McKinley, monarch of North American mountains, tossing its snowy crest four miles in the air, visible for 300 miles on the railroad; Mt. McKinley National Park, 3,000 square miles of untouched nature, the center of an unsurpassed wild game country, reached from McKinley Park Station."

President Harding's contemplated trip to Alaska in August will include something in the nature of a formal opening of the railway. Through trains are now operated between Seward and Nenana with buffet, observation cars and, as planned, with sleepers during the coming summer. The uncompleted bridge crossing the Nenana River at Nenana necessitates the only break on the line, the river now being crossed by ferry. At Seward, Anchorage, Nenana and Fairbanks will be found hotels far above the average for small towns. They are equipped with electric lights, steam heat, baths and other modern improvements. For complete steamship service to Alaska our readers are referred to table, page 77, "Pacific Coastwise Routes."

THE LURE OF HAWAII

* Writing of Hawaii in *The London Times*, Lord Northcliffe recently said:

"No matter what sort of fairyland you have imagined Hawaii to be, no matter what colorless, anemic pamphlets you may have read of it on the way there, its magical reality far and far exceeds its advertised charm. . . . It is just a scrap of Paradise dropt down by a lucky fluke into the middle of the Sea of Endless Summer."

Cooled by the steady, northeast trades sweeping over countless miles of the Pacific the summer temperature of Hawaii is delightful. Indeed as Leland E. Cofer, Assistant Surgeon-General, U. S. Quarantine Service has written:

"The usual medical 'don'ts' do not apply to Hawaii's climate. The influences in these beautiful islands offer the least resistance to bodily well-being of any well-known health resort of the world."

VACATION TRIPS AND PLAY- GROUNDS—*Continued*

The voyage from either Puget Sound, the Golden Gate or Southern California, occupying six or seven days, is one of the pleasurable experiences of a visit to these Islands. Storms are rare and the sea usually calm.

While the tourist will land at Honolulu, Island of Oahu, no visit to Hawaii is complete which does not embrace trips from this famous port to the four other important islands Kauai, Molokai, Maui and Hawaii.

The attractions of each are of infinite variety and charm.

Honolulu is a fascinating city with its palm-shaded boulevards, tropical parks and its incomparable Waikiki Beach, which prompted the late Sir Frederick Treves, surgeon to the King of England, to say:

"One great joy of Honolulu is the sea bathing, for nothing can surpass it. Those who find delight in this rudimentary pursuit must go the Hawaiian Islands to understand it in perfection. It may be claimed that there is luxurious bathing on the Lido by Venice, or at Atlantic City, or on the coast between Capetown and Dunbar. These places, as Mercutio said of his wound, 'will serve,' but they fail to approach such bathing as can be found in the cove which lies in the shelter of Diamond Head."

Rail and motor trips lead to inland attractions including the celebrated Pali, a precipice flanked by towering mountains, tropical plantations and foam-fringed shores.

Kauai, "The Garden Isle," is noted for the beauty of its scenery, brilliantly colored canyons and natural wonders, including the Barking Sands of Nohili and the Spouting Horn at Koloa.

It is on the islands of Maui and Hawaii, however, that the tourist will find those impressive natural wonders, the craters of the Hawaiian Islands. On each of these islands are areas of the newly established Hawaii National Park enclosing the world's greatest volcanoes.

Over Maui and included in the National Park, towers the great extinct crater of Haleakala ("house of the sun") 10,000 feet in altitude, of which Mark Twain wrote:

"It is the sublimest spectacle I ever witnessed. I felt like the Last Man, neglected of the Judgment, and left pinnacled in mid-heaven, a forgotten relic of a vanished world."

On the Island of Hawaii in another area of the National Park is to be seen the world's greatest living volcano, Kilauea, and nearby that towering summit Mauna Loa, each reached from attractive Hilo, the second largest city of the islands. Describing the former, E. W. Newman, traveler and lecturer says:

"The fires of a visible inferno burning in the midst of an earthly paradise is a striking contrast, afforded only in the Hawaii National Park. It is a combination of all that is terrifying and all that is beautiful, a blending of the awful with the magnificent. Lava-flows of centuries are piled high about a living volcano, which is set

like a ruby in an emerald bower of tropical grandeur. Picture a perfect May day, when glorious sunshine and smiling nature combine to make the heart glad; then multiply that day by three hundred and sixty-five and the result is the climate of Hawaii. Add to this the sweet odors, the luscious fruits, the luxuriant verdure, the flowers and colorful beauty of the tropics, and the Hawaii National Park becomes a dreamland that lingers in one's memory as long as memory survives."

Consolidation Coal for the Textile Industry

Ranking high among the industries of America, is the great Textile Industry. This industry, in 1919, consumed \$2,727,000,000 worth of raw cotton, wool and other supplies and from it produced \$5,180,000,000 worth of textile products. To accomplish this great increase, 8,000,000 tons of bituminous coal were consumed.

Because of its high heat content, cleanliness and careful selection, Consolidation Coal is ideally suited to the requirements of this progressive and efficient industry.

And the same high quality of ore, backed by the sound principles of production, which render our coals so acceptable to the textile industry, guarantees equal satisfaction to other industrial consumers.

Give Yourself a Two Weeks' Vacation

If it requires an hour a day to take care of a furnace, that means that you put in over *two weeks* of waking time in the course of a year.

Couldn't you put that time to better advantage than shoveling coal and ashes?

With CLOW GASTEAM Radiators in the building, heat becomes your servant—not your master.

They do everything that any other means of heat can do—and a good deal besides. They are adjustable to changing weather. They can be operated singly or in combination. And where it is desirable, they can be coupled to a central heating plant.

Each CLOW GASTEAM Radiator is a complete heating plant in itself—generating *steam* and using gas for fuel. They are absolutely safe and automatically regulated. There is no danger of freezing when installed in exposed or infrequently used locations.

CLOW GASTEAM Radiators are attractive in appearance. They are built of cast iron and will last as long as the building in which they are placed. Homes, hospitals, schools, public places—in fact, all buildings that require dependable warmth—are being heated with unequaled satisfaction by the CLOW GASTEAM Heating System.

There is a CLOW representative in your vicinity who will be glad to tell you all about GASTEAM heating and give you the exact figures of installation cost.

VACATION TRIPS AND PLAY- GROUNDS—Continued

PLAYGROUNDS OF THE DOMINION

Across the great sweep of the Dominion of Canada from the Land of Evangeline in the Maritime Provinces to the forest-fringed shores of the Pacific Straits are summer playgrounds of infinite variety. A brief glimpse follows of the more notable Canadian travel and vacation attractions.

"Nova Scotia," says Logan Marshall in his book "Seeing America" (John C. Winston), "like that part of the United Kingdom whence it derives its name—has many bays and harbors on its jagged coast-line. Of these Halifax is the best known for its boating and aquatic sports. Yarmouth, with its beautiful hawthorn hedges, is another well-known Nova Scotian port. At Grand Pré one may in fancy visit the site of the home of Evangeline herself, the forge of Basil, the site of the Church and of Father Felicien's dwelling. Every foot of the ground will breathe the incense of romance and history—indeed, this Land of Evangeline and the closely associated portions of Nova Scotia is acclaimed by thousands of tourists—it has within itself all of the elements that rejuvenate."

Then across the Strait of Canso is picturesque Cape Breton Island with its incomparable Bras d'Or Lakes, a yachtman's paradise.

The chief gateways to Nova Scotia are at Yarmouth, Digby and Halifax. Between Yarmouth and Boston are operated steamers of the Boston & Yarmouth S. S. Line. Between Digby and St. John, across the Bay of Fundy, are operated steamers of the Canadian Pacific System. Halifax is one of the terminals of the Canadian National Railways, this system providing connection with the New England rail lines. It is also a terminus of the Dominion Atlantic Railway. Halifax is on the route of the Red Cross Line from New York and a port of call on the Furness Bermuda Line's New York to Quebec steamer cruises.

New Brunswick perhaps offers a greater variety of summer vacation attractions than her more frequented neighbor Nova Scotia. She has many delightful watering places along her much indented coast-line, a sportman's paradise in the myriad rivers, lakes and dense forests of the interior. At St. Andrews-by-the-Sea you may join Colonel Bogey over one of the most superb golf courses in Canada, while amid the solitudes of the interior you may hunt (in season) moose, caribou, black bear and deer. Of excellent salmon and trout fishing the opportunities are inexhaustible. Speaking of a single river in the north of the Province, the Nepisiguit or "River of Foaming Waters," Theodore Roosevelt wrote:

"Good-by, lovely Nepisiguit, stream of the beautiful pools, the fisherman's ely-

sium; farewell to thy merry, noisy current, thy long quiet stretches, thy high bluffs, thy wooded and thy rocky shores. Long may thy music lull the innocent angler into day-dreams of happiness. Long may thy romantic scenery charm the eye and gladden the heart of the artist, and welcome the angler to a happy sylvan home."

New Brunswick is intersected by the two great Canadian Rail Systems with United States connections, the Canadian Pacific and Canadian National Railways.

On the north also, in the nature of a great inland lake ninety miles long, are the exquisite waters of Chaleur Bay, into which flow sixty rivers and streams from the interior. Sea and brook trout abound in these tributaries.

Beyond the northern boundary of New Brunswick is that romantic land known as the Gaspé Peninsula, which figured so prominently in the days of early discovery, and about which cluster many traditions, notably those associated with that extraordinary formation which stands like a sentinel of the eastern capes, Percé Rock.

Another Province with many charms for the summer vacationist is Prince Edward Island—"Abegweit" (cradled in the waves), as the Indians termed it. The modern designation is "Garden of the Gulf." Charlottetown, Tignish, Summerside and scores of other places are favorite vacation resorts. Fresh and salt water fishing abounds and yachting and camping are popular here.

The island is reached from Cape Tormentine, N. B., by steamer to Borden, while transportation on the island itself is afforded by the Prince Edward Island Railway (Canadian National System).

For those who would journey to the far north there is the ocean voyage to Newfoundland, altho politically not a part of the Dominion. Its approach is by steamer from North Sydney, N. S., the leading port being Port aux Basques. Transportation to the interior is by the Reid Newfoundland railway. Newfoundland is a region of big game hunting and excellent fishing.

"The St. Lawrence," says J. Castell Hopkins, F.R.S., in "French Canada and the St. Lawrence" (John C. Winston), "comes down to the Gulf under various names. From the little River St. Louis it pours through the great inland sea of Lake Superior and the St. Mary's River, with crowded canals into Lake Huron; thence in another outflow through the St. Clair and Detroit rivers to Lake Erie, and from there by the Niagara River and its wonderful falls to Lake Ontario. From Lake Ontario for 750 miles it rolls to the gulf and ocean under its own historic name. As it broadens and deepens into beautiful lakes or narrows and shallows into restless rapids; as it sweeps past cliffs crowned with verdure or great natural ridges capped with dense forests; as these break frequently to reveal fertile valleys and a rolling country, or rise into rugged and yet ex-

The VALUE of TIME for instance, in making good smoking tobacco

FOLKS, Time can be either a good servant or hard master, dependin' on its use.

THERE'S tobacco, for instance. You can't crowd Nature when the tobacco's growin' an' you can't rush time when the tobacco's agein'.

SO WE take that good ole Burley that ripened slowly in the Kentucky sun and we store it in wooden hogsheads for *two years*. Time makes it mild an' sweet as *nothing else* can.

PUTTIN' quick-sand in the hour-glass won't shorten the day's work, an' quick methods won't mellow tobacco. Stick to Velvet, the aged in the wood pipe tobacco.

Velvet Joe

IN selecting your revolver remember that precision, security and reliability are absolutely essential. It is because they excel in those very qualities that Smith & Wesson revolvers have won the title "superior."

VACATION TRIPS AND PLAY- GROUNDS —Continued

quisitely picturesque embodiments of nature such as the heights of Quebec; there comes the thought that here, indeed, is a fitting entrance to a great country, an adequate environment for the history of a romantic people, a natural stage-setting for great events and gallant deeds."

Tourists delight in the exquisite beauty of the Thousand Islands; they are thrilled by the Rapids Trip; Montreal, Canada's commercial capital, and Old-World Quebec are each of absorbing interest, but it is in the lower river that the heart of French Canada is reached, and we meet the habitant. As Harrison Rhodes in *Town and Country* says: "A trip through this country is indeed a trip abroad. . . . Of course the foreignness of Quebec City is so obvious and so well-known that it is useless to write about it, but down the river toward the gulf is an ancient land, mostly only accessible by boat, which still invites exploration. Artists come back with talk of Quai des Eboulements, where are quaint lodgings and feather beds and strange food and that rarest of all wild fowl to-day, cheapness. There is Murray Bay, like a smart English settlement in a stubbornly French country, where the seventeenth and the twentieth centuries join for your amusement. There are villages farther down, almost unvisited by tourists, while you may find, so you can always tell yourself, some gem of antique furniture or some foolish treasure brought by some early aristocratic adventurer to the wilderness from the gay land of France. Then there are the Laurentian Mountains, dotted with blue lakes, the wilderness and the habitant within a few hours' journey of metropolitan Montreal."

The trip to the lower river must not omit that indispensable extension, a sail into the mighty canyon of the Saguenay, an experience not to be duplicated on this continent.

River transportation really begins with Lake Ontario. From Lewiston near the mouth of the Niagara River to Toronto, and from Toronto to Chicoutimi at the headwaters of the Saguenay River, are operated divisions of the Canada Steamship Lines, long an institution on the St. Lawrence, with summer schedules providing for convenient connections at each of the divisional ports.

Over the surface of Ontario and beyond its immediate boundaries are spread a series of delightful playgrounds of which Lilian Whiting says in her book "Canada, the Spellbinder" (E. P. Dutton Co.): "The colossal scale of the summer resorts of Canada suggests the haunts of the Titans. The Maritime Provinces have long been a recognized locality for vacation days; but the region of Central Canada from Lake-of-Bays, Algonquim Park to Minaki

on the lakes east of Winnipeg opens a new world to the summer visitor. It invites the seeker after health, rest, sport or artistic enjoyment; it offers ideal conditions for the writer or student as well. . . . Take, for example, Lake-of-Bays! Poetic, bewitching, star-crowned Wawa!"

"North of the Lake-of-Bays is Algonquin Park—reservation of nearly two million acres—a sportsman's paradise. The Timagami region is one of great scenic beauty—the crystal clearness of the water is famous—the atmosphere is 'clear and dry.'

"Very engaging is all this country of the Highlands of Ontario, made so easy to access. . . . In the Muskoka region it is estimated that there is a transient summer population, of not less than thirty thousand every year, of people from both States and Dominion. Then, too, what can be said of that sail among the thirty thousand islands of the Georgian Bay? In color and idyllic charm this sail rivals the famous cruise among the Ionian Islands, and all the summer resorts of this region, Minnecoganashene, Sans Souci, Rose Point, and various nooks of verdant charm are peopled by their summer lovers. Lake Nipissing and the French River are attractive grounds for the camper and canoeist—Nibigami, "country of lakes," is a new outing ground in Canada, now made accessible by the Canadian National Railways."

"From the physical geographer's point of view every feature of the Alps has its counterpart somewhere in the Rockies," says A. P. Coleman, F.R.S., in his interesting volume, "The Canadian Rockies, New and Old" (Henry Frowde, Toronto). "Folds and faults and tilted strata are carved into an infinitude of shapes, including risky peaks and aiguilles; snow and ice are present in every form, smooth and easy or torn with blue crevasses and splintered into daring saraes. There is every variety of stream at work—gentle or furious, including much larger rivers and larger valleys than are in the Alps. Small lakes are far more numerous and beautiful. Every element of interest and beauty on the physical side is as well developed somewhere in the Rockies as it is in the Alps. There is a cleanness and virginity, an exquisite loveliness, about many of the Rocky Mountain peaks and valleys that has a peculiar charm."

"Places of unusual interest and beauty were chosen by the Canadian Pacific System for opening the range to mountain climbers and travelers, of which the chief is Banff in the Rocky Mountains Park," says Walter Dwight Wilcox, F.R.G.S., in his book, "The Rockies of Canada" (G. P. Putnam's Sons). "Lake Louise has the enduring attraction of nature in one of her grandest and most inspiring moods. . . . In all the mountain wildness the most complete picture of natural beauty is realized in O'Hara Lake."

Northward on the Canadian National Railway System is Mt. Robson Park and favorite points for mountaineers.

THE
CHICAGO
MILWAUKEE
AND ST. PAUL
RAILWAY

Radically Reduced Fares PACIFIC NORTHWEST

Round trip from Chicago

\$86⁰⁰ Seattle-Tacoma — twin capitals of a vacation universe. Would you conquer mountains it is but a few hours to snow-clad Rainier or to the Olympics—the range in the sea. Camp in the Cascades under mighty firs; cruise on island-dotted Puget Sound, glimpsing the Pacific through the Strait of San Juan.

\$104⁰⁰ Pacific Coast Tour —including the Puget Sound country; Portland and the Columbia River Highway; thence via rail or boat to California. Choice of routes returning.

Corresponding reductions from your home town. Tickets now on sale.

And in traveling to the Puget Sound Country you can ride over the World's Longest Electrified Railroad. The use of "white coal" eliminates soot and cinders, enabling you to thoroughly enjoy, from open observation cars, the most stupendous mountain scenery.

The famous "Olympian" and the "Columbian" between Chicago and the Northwest are electrically operated for 649 miles.

Above is an actual photograph of Corona number 27,025 purchased nine years ago by Mr. Conklyn, whose statement appears below.

Nine years service - 35¢ repairs

"CORONA has been my helper for nine years. This wonderful little typewriter has aided me in my business, increased my income, made school work easier for my children, been private secretary to my wife — and in nine years of the hardest kind of use has cost me exactly thirty-five cents for repairs!" — W. E. Conklyn, Yonkers, N. Y.

Mr. Conklyn's experience is not a bit unusual. Nearly half a million people have learned that Corona is the most willing, tireless private secretary in the world. And sixteen years of service has proved that it is the sturdiest and most trouble-proof of all typewriters, regardless of size or price.

Write for this free booklet

Read how Corona has helped other men and women to increase their output and incomes. With the booklet we will give you the address of the nearest dealer from whom you may purchase Corona on easy payments.

VACATION TRIPS AND PLAY- GROUNDS—Continued

From ocean to ocean across this vast domain of seashore, river, mountain, lake and plain span the steel bands of Canada's two great rail systems, the Canadian National Grand Trunk and the Canadian Pacific, the former with almost 40,000 miles of tracks, the latter with a mileage of about 20,000.

Over the Canadian National Grand Trunk the summer tourist may travel from Cape Breton Island, along the shores of Chaleur Bay and St. Lawrence Gulf, through the Quebec and Ontario Lake regions to Lake Nipigon and Lake of the Woods, across the plains to Mt. Robson Park, in the heart of the northernmost Rockies, and through the Fraser and Skeena River valleys to the Pacific.

From the Maritime Provinces we may pass over the Canadian Pacific System through the forests of New Brunswick, along the Ottawa River, into the Highlands of Ontario, on to the Nipissing, Lake Nipigon, Lake of the Woods regions, across vast wheatlands to the great wall of the Rocky Mountains to Banff in the Rocky Mountains Park, Lake Louise, Field and Glacier, each in settings unsurpassed by the Alps, to the picturesque Kootenay, Arrowhead, O'Kanagan Lakes districts, and finally down the Fraser River Canyon to the western ocean.

VACATION TRIPS TO EUROPE

"This year," says the New York *Herald*, "the fleets departing from this port for Europe have an aggregate gross tonnage greater than in 1914 and a larger cabin carrying capacity, and this, it is said, will be taxed to its limit by the throngs bent upon seeing Paris and other places before they die. It is believed that the first and second cabin hegira of 1913, more than 245,000, chiefly from New York, will be exceeded comfortably." To care for this summer traffic are numerous new and re-conditioned vessels, and a renewal of that competitive battle for steamship supremacy on the North Atlantic which was halted during the war. In the new rivalry for passenger traffic, size, comfort and flag have somewhat replaced the gauntlet of high speed. American competition is also active. The Stars and Stripes are flying this summer over twenty-six passenger ships, representing a total of 350,000 tons.

Each of the leading lines with ships under British register is operating a trio of immense ships. The White Star Line's giantess *Majestic*, the world's greatest ship, has been just put into commission, while their *Homeric* and *Olympic* and smaller vessels are transporting thousands this season.

Heading the Cunard tonnage are the huge *Berengaria* and the swift *Mauretania* and *Aquitania*, with many others of less great dimensions.

The American flag will be also well represented. The United States Lines are operating a fleet including the *George Washington*, *America*, and new ships named after Presidents of the United States, a total of eighteen vessels.

Another fleet flying the American flag is that of the United American Lines operating the new twenty-thousand tonners, *Resolute* and *Reliance*.

Leading the French Line fleet are the new *Paris*, the *France*, and their companions, making calls at Plymouth this summer.

The long-established Royal Mail Steam Packet, a newcomer, however, in the North Atlantic service, is operating an extensive fleet, having chartered for this season several ships from the Lamport & Holt South American trade.

In the steamship news of the summer it should be also noted that there is a partial resumption of service this season by the Hamburg-American and North German Lloyd Lines.

A complete outline of transatlantic routes and lines will be found in the table on page 85.

The European itinerary offers a selection so varied in direction, time and expense that no attempt can be made here to present all its possibilities. Whether it be the Lake District and cathedral towns of England; the Highlands and castles of Scotland; Belgium; the battle-fields, chateaux and pastoral regions of France; the quaint scenes of Holland, the Passion Play; the magnificent scenery of Switzerland, or the historic treasures of Italy, there have not been available since the war so many trips, short or long, and satisfying all tastes.

**Nine nails failed
to puncture this
Lee Tire.**

LEE Puncture Proof Tires

B. Borchardt Company, Wholesale Grocers of Brunswick, Ga., report: "These (Lee Puncture-proof) tires have never been off the car for any cause. One of the tires at one time had nine (9) nails pulled out of same without a puncture. Today there seems at least 40% of the non-skid tread still on the tires, and we have had 12,000 mileage out of them."

LEES Smile
at Miles

NEITHER latitude nor longitude affects the popularity of Lee Puncture-proof tires. Records of unusual mileage and stability performance in the north, east and west are duplicated in the south.

The endorsement quoted above is typical of the puncture-proof service you may expect, no matter where you place Lee Puncture-proof tires.

They are an absolute necessity to the economical operation of every motor car or truck operated for profit---an important essential wherever punctures or blowouts mean annoying, expensive delays. They carry a cash refund guarantee against puncture.

Lee regular Fabric and Cord tires and Lee G. S. (Government Specification) Tubes make this the only complete line of pneumatic equipment.

Buying from a Lee Dealer is equivalent to having tires made to order for your particular service.

Look for "Lee Tires" in your Telephone Book.

How was she to know?

FINALLY he appeared one evening—the man who stirred her heart—the man, at last, who captured her instant interest.

All the rest had seemed only casual, arousing never a single serious emotion.

But he seemed so different! The moment their eyes met there seemed to be an understanding. They felt drawn to one another.

Through a mutual friend an introduction was arranged. Then they danced.

But only one dance! He thanked his partner and went his way. She saw no more of him. Why he lost interest was a mystery to her.

How was she to know?

* * *

That so often is the insidious thing about halitosis (the scientific term for unpleasant breath). Rarely indeed can you detect halitosis yourself. And your most intimate friends will not speak of your trouble to you. The subject is too delicate.

Maybe halitosis is chronic with you, due to some deep-seated organic disorder. Then a doctor or dentist should be consulted. Usually, though, halitosis is only local and temporary. Then it yields quickly to the wonderfully effective antiseptic and deodorizing properties of Listerine.

Fastidious people prefer to be on the safe and polite side. They make Listerine a systematic part of their daily toilet routine—as a gargle and mouth wash.

It is so much easier to be comfortably assured your breath is sweet, fresh and clean; to know you are not offending your friends or those about you.

Start using Listerine today. Be in doubt no longer about your breath—Lambert Pharmacal Co., St. Louis, Mo.

VACATION TRIPS AND PLAY-GROUNDS—Continued

One of the notable attractions of the European trip this summer will be the resumption, after an interval of twelve years, of the famous Passion Play of Oberammergau. Thirty-two performances will be given during the present season, from May 14th to September 24th. Steamship officials estimate a total attendance during the summer from the United States of almost 100,000 Americans. As early as April last 25,000 had applied for reservations at Oberammergau. "Elaborate preparations have been made," says the New York Times, "by the inhabitants of the Bavarian village to entertain visitors. Since the last performance in 1910 a garage for 200 automobiles has been erected in the village, which can also be reached by the electric railway from Munich in less than two hours."

In arranging a trip which will provide the most for time and money available, the services of the well-established and completely equipped tourist agencies, such as the American Express Co., Thomas Cook & Son, Raymond & Whitecomb Co., and others, will be found of great value. They have reduced travel to a science. Whether the traveler joins one of their escorted tours or avails himself of their individual tourist service he is certain to obtain greater comfort and satisfaction than by making his own plans. Funds for travel at home or abroad may be conveniently carried by purchasing checks issued by the American Express Co., American Bankers Association, Knauth, Nachod & Kuhne, Thomas Cook, and others.

Shake It Into Your Shoes

Sprinkle It Into Your Foot-Bath

ALLEN'S FOOT-EASE

The Antiseptic, Healing Powder for the Feet

Takes the friction from the shoe, relieves the pain of corns, bunions, callouses and sore spots, freshens the feet and gives new vigor.

Makes Tight or New Shoes Feel Easy

At night when your feet are tired, sore and swollen from walking or dancing, sprinkle Allen's Foot-Ease in the foot-bath and enjoy the bliss of feet without an ache.

Over One Million five hundred thousand pounds of Powder for the Feet were used by our Army and Navy during the war.

In a Pinch, use ALLEN'S FOOT-EASE

Easy to Play Easy to Pay

Saxophone Book Free

Tells when to use Saxophone—singly, in sextets or in regular band; how to transpose cello parts in orchestra and many other things you would like to know.

True-Tone Saxophone

Easiest of all wind instruments to play and one of the most beautiful. You can learn the scale in an hour's practice and play popular music in a few weeks. You can take your place in a band within 90 days, if you so desire. Unrivalled for home entertainment, church, lodge or school. In big demand for orchestra dance music. The portrait above is of Donald Clark, Soloist with the famous Paul Whiteman's Orchestra.

Free Trial You may order any Buescher Instrument without paying one cent in advance, and try it six days in your own home, without obligation. If perfectly satisfied, pay for it on easy payments to suit your convenience. Mention the instrument interested in and a complete catalog will be mailed free.

The Price You Pay

For dingy film on teeth

Let us show you by a ten-day test how combating film in this new way beautifies the teeth.

Now your teeth are coated with a viscous film. You can feel it with your tongue. It clings to teeth, enters crevices and stays. It forms the basis of fixed cloudy coats.

That film resists the tooth brush. No ordinary tooth paste can effectively combat it. That is why so many well-brushed teeth discolor and decay.

Keeps teeth dingy

Film absorbs stains, making the teeth look dingy. Film is the basis of tartar. It holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film. And, despite the tooth brush, they have constantly increased.

Attack it daily

Careful people have this film removed twice yearly by their dentists. But the need is for a daily film combatant.

Now dental science, after long research,

has found two ways to fight film. Able authorities have proved their efficiency. A new-type tooth paste has been perfected to comply with modern requirements. The name is Pepsodent. These two film combatants are embodied in it, to fight the film twice daily.

Two other effects

Pepsodent also multiplies the starch digestant in saliva. That is there to digest starch deposits which otherwise may cling and form acids.

It multiplies the alkalinity of the saliva. That is Nature's neutralizer for acids which cause decay.

Thus every use gives multiplied effect to Nature's tooth-protecting agents in the mouth. Modern authorities consider that essential.

Millions employ it

Millions of people now use Pepsodent, largely by dental advice. The results are seen everywhere—in glistening teeth.

Once see its effects and you will adopt it too. You will always want the whiter, cleaner, safer teeth you see. Make this test and watch the changes that it brings. Cut out the coupon now.

Why the Judge Named a Trust Company

"I NAMED a trust company in my will, as executor and trustee of my estate," writes Judge W., "for reasons which appealed to me so strongly that I do not hesitate to give them:

"*First:* I wanted the appointment of my executor to be a permanent one, not to be upset by the death of any friend that I might choose to act in that capacity, either before or after my demise—the former necessitating revising my will, the latter resulting in the appointment by the court of an administrator of my affairs of whom I could know nothing.

"*Second:* I desired the security offered by the resources and experience of a trust company.

"*Third:* I wanted the settling of my affairs on a strictly business basis, and under the management of men whose business it is to do such work and whose sole object is to comply with the provisions of my will, swayed by neither affection, prejudice nor personal gain or hope of it.

"I named a trust company as executor and trustee of my will, because I wanted the sense of security that comes with knowing that the provisions of one's will surely will be faithfully and efficiently carried out."

Ask a Trust Company for this Booklet

Today, ask a trust company for a copy of "Safeguarding Your Family's Future," which explains the duties of an executor and trustee and why you should name a trust company. If a trust company is not near you, write to the address below for a copy of the booklet.

MUST BUSINESS BE ALWAYS UP OR DOWN?

A N intelligent camel, so the story goes, was once asked by his master whether he would prefer to travel uphill or downhill. His answer was to the general effect that he preferred the long level road over the desert, and that he hoped it was still open. This is the point of view which was expressed some months ago by many business writers who at that time seriously suggested "the feasibility of preventing the excessive swings from prosperity to depression or of bringing down the peaks and filling up the valleys of the business curve." Such suggestions, says Mr. William O. Scroggs, the economist, in the financial section of the *New York Evening Post*, generally made more impression on the economist or statistician than on the average business man, whose usual reaction was: "Give me the peaks and I'll take my chances with the valleys." Indeed, continues the writer,

There was a quite prevalent belief at the time that the way to bring about a return of prosperity was to start the general level of prices to swinging upward again. There is not such a keen desire for higher prices to-day as there was then. Business men realize that wage adjustments and smaller earnings by practically all groups will prevent purchasing power from keeping pace with advancing prices, and that any immediate return of inflation will mean only the repetition of the vicious circle of higher prices, higher wages and production costs, and then still higher prices, and so on. So long as this feeling persists, there is little prospect of a resumption of the extreme swings of the business curve.

There is no reason to suppose that the present feeling will last indefinitely. As the various steps in readjustment are completed the desire for a boom will reassert itself.

In fact, a rather feeble call for one is already beginning to be heard. When production costs are brought down to a minimum, business will again experience the tonic effect of a wider margin of profits and will take on new life.

Now this, of course, is just what everybody wants to see, but, as Mr. Scroggs puts the question, "once we have again entered upon the expansionist phase, how far should we go?"

It is just when the country persuades itself that it has entered upon a prolonged period of good times that the way is beginning to be paved for a return of hard times.

Hence the significance of the statement that if we would avoid the troughs of depression we must keep off the peaks of inflation. As business again takes the upward path the time is propitious for its leaders to consider ways and means for making the business curve somewhat smoother. When once the boom psychology gathers headway it will be too late.

IS THE FAIRER SEX ALSO THE THRIFTIER SEX?

AS far as the average woman is concerned it would seem that she spends less on her clothes than the average man and is, on the whole, a better saver. At least, so reports a statistician—a woman, by the way—who is in charge of the Home Service Department of the Bridgeport Savings Bank. This institution is the second savings bank in the country to install such a department, and in connection with it has been making a careful research into the spending habits of the people in the important New England industrial center in which it is located. It was discovered that women whose husbands earn between \$2,000 and \$3,000 a year are much more economical with their clothes than men, at least that seems to be the case in Bridgeport. But it also seems that when the family incomes rise above \$4,000 the feminine impulse toward economy weakens and the wives are apt to spend on dress more than they can afford. As the investigator's statements made at a recent bankers' convention are summarized in a dispatch to the *New York Times*, the explanation is that these women have no very extensive social duties, and therefore need but a modest outlay of clothing, while their husbands are forced to meet the public and look presentable. But it is added that the men are really more extravagant in the way of fine feathers than they need to be. These \$2,000 to \$3,000 a year husbands not only dress more expensively than their wives, we are told, but also spend more on such "luxuries" as lunches, cigars and amusements. "Women whose husbands earn under \$4,000 a year are far behind men in their expenditure on clothing, but," it is asserted, "above that they are larger investors in glad raiment." On this *The Times* comments editorially in not too serious a vein:

That the dividing line should be at just this point is curious, but, accepting it as correct, women in far greater numbers than men must be of thrifty habit, and the familiar charge against them as a sex that they do not know the value of money and how hard it is to get must be unjust.

That no end of men who earn less than \$4,000 a year spend money extravagantly is a fact too familiar to be questioned. They submit to compulsions toward expenditures useless or worse far oftener than women do, and they are not as well able to distinguish between economy and meanness. This, however, is not always their own fault. Occasionally they are permitted, if not encouraged, to be lavish by the charming objects of their admiration and pursuit.

But that, of course, applies only to young men—the unmarried ones. Husbands, at least in the United States, are safe from all such temptations toward a noble carelessness with their cash.

4½% on Savings

New U. S. Treasury Savings Certificates offer an unusual opportunity to save systematically

THE United States Government, through the Treasury and Post Office Departments, has announced a sure way to help men and women everywhere who want to save money and make it earn more.

Treasury Savings Certificates, New Issue, are now added to the previous offerings of Government securities for investment of savings. These new Treasury Savings Certificates will earn 4½ per cent a year, compounded semi-annually, if held to maturity.

The Certificates may be redeemed before maturity at redemption prices which increase from month to month, as stated on the backs of the Certificates, yielding about 3½ per cent interest, compounded semi-annually.

Issued in denominations within the reach of all. At present prices you can buy a \$25 Certificate for \$20, a \$100 Certificate for \$80, or a \$1000 Certificate for \$800. Each matures in five years from date of issue, earning 25 percent for the full period of investment.

The New Way to Save

This is a new and simpler way to save methodically, devised primarily for weekly or monthly savings. If you can save \$20 per week or per month, these Certificates have an unusual earning capacity.

If you save less than \$20 per month, you can accumulate Postal Savings Stamps at 10 cents each, or Treasury Savings Stamps at \$1 each, both non-interest bearing. Or you can open an interest-bearing Postal Savings account. Then you can convert your savings into a Treasury Savings Certificate when you accumulate \$20.

Thus the Government offers the people an ideal system of saving—absolute safety, liberal interest, ready cash if withdrawn. Everybody can and should take advantage of this opportunity and learn how easy it is for savings to accumulate.

United States Treasury Savings Certificates may be purchased at Post Offices, Federal Reserve Banks, banks and trust companies, or direct from the United States Government Savings System, Treasury Department, Washington, D. C.

How Dollars Grow

Below are shown the results of investment in Treasury Savings Certificates—how your money grows when interest is compounded semi-annually. It shows how to make the money you work for, work for you. And all the time with absolute safety. Observe how soon you will earn 25 per cent—in only 5 years your \$20 becomes \$25, your \$80 becomes \$100, your \$800 becomes \$1000.

Issue Price	Value after one year	Value after two years	Value after three years	Value after four years	Maturity
\$20	\$20.70	\$21.45	\$22.20	\$23.00	\$25
80	82.80	85.80	88.80	92.00	100
800	828.00	858.00	888.00	920.00	1000

Liberal Interest

Treasury Savings Certificates present an ideal form of investment, fully protected, and with a liberal rate of interest. Each dollar saved earns 25 per cent in 5 years, which is at the rate of 4½ per cent a year, compounded semi-annually. If withdrawn before maturity you receive interest at the rate of 3½ per cent, compounded semi-annually.

Safety

These Certificates are a direct obligation of your government, the soundest investment conceivable, backed by the strength of the Nation. Your principal and interest are absolutely safe. Risk is eliminated. Certificates are registered in your name at time of purchase, protecting you against loss or theft.

Certain Value

The Certificates are not subject to market fluctuations and cannot depreciate in value. They are always worth what you paid for them plus the interest.

Payment on Demand

You can withdraw your money at any time, without waiting until maturity of the Certificates. This provides for any emergency. The Government, however, cannot call them for redemption before maturity.

Instant Popularity

These Treasury Savings Certificates are like United States Bonds, and thousands of people all over the land have hastened to take advantage of this new way of saving.

While much information is published on this page, you may desire additional details. Ask your Postmaster, or write to the United States Government Savings System, Treasury Department, Washington, D. C.

Become thoroughly posted on this unusual opportunity. Begin saving by this simpler, more profitable method, and let your dollars work for you.

Many Attractive Features

In addition to the advantages already listed, you will find many other attractions. For instance, any individual can buy Treasury Savings Certificates up to \$5000, face value, of any one series.

A new series is issued each year. Each member of the family can own up to \$5000 worth; likewise corporations, partnerships, associations, and joint-stock companies; or trustees; or two persons in the alternative, payable to either person or to the survivor; or an infant or infant's guardian; or the Certificates may be made payable to a beneficiary, that is, registered in the name of one person and upon his death payable to another.

The Certificates are exempt from State and local taxation (except estate and inheritance taxes) and from normal Federal income tax.

The Certificates are redeemable upon presentation and surrender, by mail or otherwise, to the Treasury Department, Washington, at the prices indicated in the table printed on the back of each Certificate.

Mail this coupon with remittance to the United States Government Savings System, Washington, D. C.

UNEMPLOYMENT NO BETTER IN EUROPE

WHILE we are being told from time to time that conditions are improving in Europe, and while this is borne out by the advance of some of the foreign exchanges, the figures on unemployment show that the condition of industry is still very far from healthy. Taking Europe as a whole, says *The Wall Street Journal*, unemployment is about as bad as ever. Germany, Holland, Italy, Norway and Switzerland report an increase in the number of jobless, while other countries show little or no improvement. As we read in *The Wall Street Journal*:

England showed some improvement in February over January; percentage of unemployed among members of trade unions being 16.3 against 16.8. Total number of unemployed registered at employment exchanges of February 28 was 1,837,000, of whom 1,411,000 were men, 318,000 women, remainder boys and girls. Besides totally unemployed, on February 21 some 156,000 males and 110,000 females were working on short time. Changes in wage rates taking effect in February, in industries covered by reports, showed net reduction of £390,000 in weekly full-time wages of over 2,400,000 workers.

Unemployment in France, as reflected by employment exchanges, has decreased notably. It is now stationary. Crisis in unemployment which began in May, 1920, reached maximum in February-March, 1921, figures being as follows: 39,522, end of December, 1920; 89,289, end of February, 1921; 75,569, end of April; 37,226, July; 16,518, October; 9,602, December; 9,640, January, 1922; 9,244, February; 9,345, March 10. These figures do not give total unemployed, as part-time workers are not included, nor do they show unemployment figures for localities where no provision exists for unemployment funds. Moreover, in localities providing unemployment funds, figures are frequently not complete.

German figures, based on out-of-work donations, show increase from 164,958 on January 1 to 196,103 February 1. Returns from trade unions show that out of total membership of 5,797,753 some 190,614, or 3.3 per cent., were unemployed at end of January.

Holland reports that on February 11 1922, there were 86,842 unemployed men and women seeking work. This was an increase of 10,000 in five weeks. Denmark gives 99,000 unemployed out of 280,000 workers reported on March 13.

Belgium's latest reports up to end of December show out of a total of 756,576 workers, reporting totally unemployed were 49,851; partly, 36,232. Percentage of totally unemployed was 6.6 per cent., contrasted with 7 per cent. in November.

On January 1 Italy had 541,779 persons totally unemployed, compared with 512,260 on December 1. Partly employed January 1 numbered 178,662 against 181,002 on December 1.

At the end of February, Norway reports unemployed numbering 47,200, compared with 41,500 on January 10. Sweden had 140,883 persons unemployed on December 31, or 33.2 per cent. of union membership. Percentage increased in January,

BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's biggest business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$50 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete courses in shorthand and typewriting, new principles, insure exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed goes accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you nevertheless need New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Man's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

1922, to 35.6 per cent. January 31, 1921, gave 20.2 per cent. only.

Conditions in Switzerland do not improve, and unemployment figures show a steady trend upward. Compared with December, 1920, when 65,259 were partially and wholly unemployed; and in January, 1921, when there were 106,574. January, 1922, record stood at 145,761. Figures up to January 14 show that Vienna contained 27,000 unemployed, as against 18,000 at beginning of 1922.

EXCHANGES UNAFFECTED BY GENOA

ALTHO the Genoa Conference discuss matters of the highest import, financial and economic, affecting practically all of Europe, the effect of the successive crises upon foreign exchange quotations was practically negligible, *The Wall Street Journal* notes. In fact, it seems to be of the opinion that the chief currencies would have fluctuated in just about the same way if there had been no conference at all. The financial editor of the *New York Evening Post* suggests that "financial quarters foresaw the futility of the Conference, and consequently are not discouraged at its failure." Closing demand quotations for April 10 and May 16 and the high and low points reached between those periods for the more important European currencies are set down by *The Wall Street Journal* as follows:

	April 10	High	Low	May 16	Net Inc.
Sterling	\$4.413 $\frac{1}{4}$	\$4.443 $\frac{1}{4}$	\$4.407 $\frac{1}{2}$	\$4.443 $\frac{1}{4}$	\$.03
Francs	.0924 $\frac{1}{2}$	.0937	.0898	.0914	*.0009 $\frac{1}{2}$
Lire	.0542 $\frac{1}{2}$	.0553 $\frac{3}{4}$	.0520 $\frac{1}{4}$	.0528	*.0014 $\frac{1}{2}$
Marks	.0035	.0043 $\frac{3}{4}$	.0032 $\frac{1}{2}$	.0035 $\frac{1}{2}$	.0000 $\frac{1}{2}$
Belgium	.0857	.0864 $\frac{1}{2}$	.0820 $\frac{1}{2}$	.0832	*.0025

*Decrease.

On these figures *The Wall Street Journal* then comments:

Increase of \$.03 in sterling since opening of the Conference is generally attributed to presentation of the British budget for next year, and to approval of financial program. Fluctuations have been small, and seemingly paid no attention to Genoa.

Marks underwent practically no net change during the Conference, altho fluctuations were large. High point of \$.0043 $\frac{3}{4}$ reached was due to the Russo-German treaty and to J. P. Morgan's acceptance of the invitation to sit on the commission which is to consider the German loan. However, as the gain was due to sentiment which caused increased speculation, the inevitable reaction carried the mark to its former level.

Francs, lire and Belgian francs have moved practically in unison, and have been rather sensitive to developments at the Conference. High points were reached on Easter Monday, which was a holiday in Europe, and represented American sentiment only. The low points resulted from the first serious split in allied ranks at Genoa, but rates recovered partly soon after.

Bankers who were bullish on exchange before the Conference claim that unfavorable sentiment created there kept the three Latin exchanges from rising in the same proportion as sterling, but prevalent opinion is that all of them, with the possible exception of lire, were and are selling as high as conditions warranted, and that only the narrow market allowed for the movements which did take place.

Make Your Next Paint Job Last Longer

Paint oil stored in drums and barrels soon accumulates "foots and fats," as the painters say, and then will not penetrate, but stays on the surface. This means that, very soon, the paint begins to peel—and the money you spent is partly wasted.

On the other hand, paint oil that is stored in Bowser sealed tanks, and delivered through Bowser measuring pumps, is in prime condition, even after long storage.

Buy from the store that has Bowser equipment. You are then sure that your paint will be fresh, of full original body, of high penetrative qualities—the best that money can buy.

THE GROCER'S NINETEEN PER CENT.

AN INQUIRY was made not long ago into the grocer's margin of profit, the results of which are likely to surprise those consumers who have been wrathful over the alleged "spread" between wholesale and retail prices. These figures, which were gathered in connection with the work of a Congressional inquiry, are made public by the National Association of Retail Grocers. The report, as quoted in a Kansas City dispatch to the Philadelphia *Retail Public Ledger*, shows that:

The difference between the cost to the grocers and the price at which they were sold, by the 185 grocers reporting on the thirty-seven activities enumerated on the schedule, shows a gross margin of 19 per cent. during the month of October, 1921.

This margin represents the figured price and does not make allowance for the element of natural shrinkage, which will, of necessity, reduce it somewhat. It is plain to see, therefore, that the margins charged by the retail distributor on the articles which the commission is investigating, are indeed not excessive and conclusively proves our statements that they are fair and reasonable and not out of line with the present cost of doing business.

It appeared from the questionnaire that the cost of doing business for the average grocer was about 15 per cent. of the gross margin. This would show a possible net profit of 4 per cent., from which would have to come the natural shrinkage, credit losses and pilfering which of necessity creep into any and all retail grocery operations and always make the net profit materially less than the figures which might be anticipated. The writer states that many grocers failed to report various items of expense and he thinks that if every individual return was minutely analyzed it would be found "that the average is 2 per cent. more than the 15 per cent. indicated."

IS WASHINGTON BECOMING THE BUSINESS CAPITAL OF AMERICA?

WASHINGTON has become the business as well as the political capital of the nation, asserts a writer in *Forbes Magazine*, who points out that:

Out of the more than 200 organizations which now maintain Washington headquarters, one-third to one-half are business organizations. Some of them, like the National Manufacturers' Association, the forerunner of all business establishments in Washington, cover more than one industry. The United States Chamber of Commerce, for example, represents practically all business, as it is the Washington headquarters for virtually all the chambers of commerce in the country, and in its membership are individuals from all lines of industry. It is now erecting a large office building to house its rapidly expanding activities; and the structure is already being referred to as the "Business Capitol" of the United States.

CURRENT EVENTS

FOREIGN

May 17.—The French Government accepts the proposal of the British Government for an international inquiry into Turkish atrocities.

In a pitched battle between police and soldiers and Sinn Fein gunmen in Belfast one man is killed and five are wounded.

May 18.—Michael Collins, Chairman of the Irish Free State Government, and Eamon De Valera, leader of the Republicans, confer in an effort to bring peace between the two parties. Meanwhile disorders in Belfast result in the death of six men and the wounding of several.

May 19.—The Genoa Conference ends with the following accomplishments: an eight months' European and Near Eastern truce embodied in a provisional pact of non-aggression; agreement to meet and discuss Russian affairs at The Hague not later than June 20; approval of proposals for further conference, and the Russo-German treaty, not on the agenda.

Lady Rhondda's claim to a seat in the House of Lords is rejected by the Committee on Privileges, which reverses its former decision.

Michael Collins and Eamon De Valera report to the Dail Eireann that they have failed to reach an agreement. Seven persons are killed and nearly a dozen wounded in outrages in Belfast.

Italy and Jugo-Slavia have reached an agreement by which Fiume is acknowledged as an independent state and a commercial treaty is completed between the two countries.

May 20.—The Free State and De Valera factions reach an agreement under which a coalition ticket will be submitted to the voters, the balance of power remaining with the Free Staters.

Leonid Krassin, Russian Bolshevik representative in London, is appointed Soviet Ambassador to Germany, according to a dispatch from Berlin.

May 21.—Ninety people, including two American missionaries on their way to India, are lost when the Peninsula and Oriental line steamer *Egypt* sinks off the Island of Ushant after a collision with the French freighter *Seine*.

Incendiarism, bombing and shooting mark the week-end in Belfast. Thirteen people are reported to have been killed, bringing the total for the week up to thirty-five.

Russian batteries in the Black Sea are reported to have sunk the Italian steamship *Marte*. Half the crew is said to have been killed.

May 22.—W. T. Twaddell, member of the Ulster Parliament from West Belfast, is shot to death by gunmen.

A rebellion of eight hours' duration in Nicaragua is put down by a handful of American marines without firing a shot.

DOMESTIC

May 17.—Gifford Pinchot, who was a political disciple of Theodore Roosevelt, wins the Republican nomination for governor of Pennsylvania over Attorney-General George E. Alter.

Fifty-five thousand square miles of land in Louisiana and Mississippi are over-

Mullins Stamping Stand Terrific Strains

STRENGTH—without useless weight—
was the problem! So, when the war
department needed an immense quantity of
Handley-Page airplanes, government experts
selected the Mullins plant to make the most
intricate metal parts. Mullins produced
difficult, accurate dies, tools and hundreds
of thousands of stamped metal parts in
record breaking time.

For 40 years we have made all kinds of metal
stampings for America's greatest industries.
We are equipped to do your stamping quicker,
better and more economically.

Before you buy metal stampings of any kind
—for any purpose—let our engineers co-
operate with you in solving your problems.

Write for the Mullins book
of unusual achievements.

flowed by flood or backwater from the
Mississippi River, according to a state-
ment by Joseph C. Logan, Assistant
Manager in the Southern Division of
the American Red Cross.

The House of Representatives authorizes
an appropriation of \$150,000 to re-
model and furnish the J. P. Morgan
home in London, donated to the Gov-
ernment for use as the American Em-
bassy.

Representative Fitzgerald, of Ohio, intro-
duces in the House a resolution propos-
ing an amendment to the Constitution
to uphold the validity of the child labor
law recently declared by the United
States Supreme Court to be unconstitu-
tional.

Ordinary Government expenditures for the
ten months of the present fiscal year fell
off by nearly \$1,500,000 as compared
with the corresponding period of last
year, while public debt disbursements
declined more than \$1,000,000,000, ac-
cording to a statement issued by the
Treasury.

May 18.—Forty-one steel manufacturers
dine and confer with President Harding
at the White House, and approve in
principle the President's suggestion for
the abolition of the twelve-hour day.

Fifty operators of non-union and open-
shop coal mines, after listening to a
warning from Secretary Hoover that
the Government may be forced to run
the industry, adopt a plan requiring
the creation of clearing-house commit-
tees in the coal-producing districts,
made up of operators, consumers and
representatives, and a Government
agent who will see that coal is sold direct
to consumers and that prices are reason-
able. A call is issued for another and
larger meeting to ratify the plan.

Secretary Hughes sends a memorandum
to Ambassador Child at Genoa, instruct-
ing him to inform the Powers that the
American Government holds that po-
litical recognition of Russia can not
come before the economic problems of
that country are met and solved, and
otherwise to clarify the American
response to the invitation to attend the
Conference at The Hague.

May 19.—Two men are killed and seven
are seriously injured by an explosion
following an experiment with liquid
air at Harvard University.

May 20.—Two negroes are lynched in
Texas, making a total in that State of
four lynchings in three days.

Nineteen railroad executives confer at
a dinner with President Harding on the
question of voluntarily reducing rail-
road rates, and refer the matter to a
special committee from their member-
ship.

May 21.—Secretary Hoover issues a call
for a conference on May 31, of all the
soft-coal mine operators whose mines
are still producing, with a view to hold-
ing down soft-coal prices.

May 22.—Completion of the proposed
Bethlehem-Lackawanna steel merger is
delayed, pending an investigation, it is
announced from the Attorney-Gen-
eral's office.

The Senate passes the House bill fixing
a new basis of pay for officers and en-
listed personnel of the army, navy,
marine corps, coast guard, geodetic
survey and public health service de-
partment.

RADIO is now within the reach of everybody

No longer is it necessary to be an expert. Radio
or wireless telephone receiving sets are as simple
to operate as the phonograph. "Listen in"—
turn a tuning knob—and anyone can enjoy
the concert music, lectures, speeches, news, ser-
mons and bed-time stories broadcasted by one
of the many stations that now make it a daily
and nightly business to entertain and instruct
thousands who own receiving sets.

Jason Weiler & Sons, as one of the first concerns
in America to become identified with the Radio-
Telephone, is able to offer not only the newest and
best outfits and equipment, but in selling direct—
guarantees a splendid saving. Do not purchase
any radio outfits without first writing Jason
Weiler & Sons, for FREE Illustrated and Descrip-
tive Price List of Radio Outfits.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"R. E. M.," Nantes, France.—"(1) Give as complete a definition of the word *dialect* as is possible. (2) Is it possible to speak a Swedish dialect in the English language? (3) What was the amount of money loaned the United States by France during our Revolutionary War?"

(1) *Dialect* consists of (a) the forms of speech collectively that are peculiar to the people of a particular district or to a class of people, as distinguished collectively from other forms of the same language; a language as modified by local peculiarities; in a loose sense, a provincial mode of speech or pronunciation as differing from a literary standard.

Dialect, in the proper sense of the word, is not to be defined merely as a non-literary relative of a literary language. It is that, of course, but it is more than that. It is not based always upon distinctions of locality or degrees of education, altho in popular usage this is what is meant when *dialect* is spoken of. . . . But the word *dialect* may with equal truth be applied to the special vocabulary and phraseology of any class or profession, no matter where the members of it may have their habitat. Thus there is a lawyers' *dialect* and a stockbrokers' *dialect* and a physicians' *dialect* and a thieves' *dialect* and a *dialect* of journalism. In all these and many others there exists a swarm of words and phrases and allusions which are as far removed from the current language as the patois of a French-Canadian voyageur is removed from the precise and measured diction of an Academician. *N. Y. Commercial Advertiser*, Nov. 7, 1903, page 4.

The Irish, the Welsh, and the Erse are no other than different *dialects* of the same tongue, the ancient Celtic. *BLAIR Rhetoric*, p. 95.

(b) Any given mode or use of speech or language; phraseology.

Shakespeare's passages of passion . . . are in the very *dialect* of the present year. *EMERSON Essays, Nominalist and Realist* in second series, p. 189.

(2) One can not speak a Swedish dialect in English, but one can speak dialectal Swedish, for there are in Sweden Old Swedish, the pre-Reformation language, Modern Swedish, and several dialects. (3) Between 1777-1783 \$6,352,000 were obtained from France, \$174,000 from Spain, and \$1,304,000 from Holland. Small loans were obtained in France as early as 1777, but this is not the entire amount.

"G. E. C.," Washington, D. C.—"Using the word *plead* as the present form, what is the correct word to use for the past tense, *pleaded* or *plead*? Also, when *plead* is used in the past form, is it proper to spell it *pled*, or is it to be spelled *plead* in the past as well as in the present tense?"

The spelling of *pled* for the past is not warranted and is a colloquialism. Careful speakers use *pleaded*. *Plead* is also used for the past tense as well as *pleaded*, altho the latter is the preferred form.

"A. H.," Butte, Mont.—"Kindly tell me the writer's real name who writes under the name of *Lewis Carroll*. What books has he written besides 'Alice in Wonderland' and 'Through the Looking Glass'?"

Lewis Carroll is the pen-name of Charles L. Dodgson. Besides the two works which you mention, he is the author of "The Hunting of the Snark: an Agony in Eight Fits," "Elementary Treatise on Determinants," "Phantasmagoria and Other Poems," "Euclid and His Modern Rivals," etc.

"E. E. F.," Hemingford, Neb.—"Did Elihu Root receive the Nobel Prize, and if so, what for?"

Elihu Root won the Alfred B. Nobel prize for peace in 1912.

"M. I. D.," Mobile, Ala.—"Is it correct, or permissible, to write the words 'in so far' together followed by 'as' in the same way that 'inasmuch as' is written?"

The phrase is correctly written *in so far as*. In this phrase, however, the *in* is redundant and meaningless. *So far as* is complete in itself as an adverbial phrase, and expresses all that is meant.

Another form of building insurance

SOME buildings age gracefully, unnoticeably. Others begin to look down-at-heel after a few years of occupancy. People start to say, "They have seen their best days."

The difference is in appearance—often in details. Hardware, for example, that is bought for cheapness, usually proves an expensive bargain when its newness begins to fade. A prospective tenant may judge the entire building on the visible evidence of inferior hardware.

With Sargent Locks and Hardware you are safe. When an architect specifies "Sargent" he assures satisfaction and security that lasts as long as the building stands. That is why so many of the nation's most important public and commercial buildings are equipped with Sargent Locks and Hardware.

If you are interested in the construction of a building or a home, don't neglect the important subject of hardware. Be guided by the advice of your architect. If you would like to see some of the beautiful designs in which Sargent Hardware is made, send for the Sargent Book of Designs. There is no charge or obligation involved.

SARGENT & COMPANY

New Haven, Conn.

BUILD NOW
And let Sargent Hardware add the final touch of beauty and security.

You can install Sargent Door Closers and almost forget them. They function surely and silently with little attention. There are heavy models for outside and inside use and the model illustrated above for light inside doors. Let us send you particulars.

THE • SPICE • OF • LIFE

The Saving Grace.—Good footwork is essential in boxing, we are informed. That would be our only chance with Mr. Dempsey.—*Punch (London)*.

Why They're So Busy.—"What makes girls run about the way they do?" snarls a petulant clubwoman, and a timid exchange suggests they may be trying to find their mothers.—*Kansas City Journal*.

Covered.—A policeman recently told an interviewer that visitors frequently asked him where the Strand was when he was actually standing on it. There should be a law against tourists baiting our bobbies as to their size in footwear.—*London Opinion*.

This Is no Joke.—In Maryland, we read, it is illegal for a woman to go through her husband's pockets at night. In our own country it is merely a waste of time.—*Punch (London)*.

His Consolation.—MOTORIST—"Yes, it took me about six weeks' hard work to learn to drive my machine."

PEDESTRIAN—"And what have you for your pains?"

MOTORIST—"Liniment."—*Pacific Weekly*.

Breaking It Gently.—MOLLIE (aged six)—"Mummie, I know what I'm going to give you for your birthday. A nice rose bowl."

MOTHER—"But I have one, dear."

MOLLIE—"Yes, I know, but . . . I've just broken it."—*Morning Post*.

Slightly Mixed.—Little Harold had been reading "Treasure Island" since early morning and it was only with a great deal of persuasion on the part of his mother that he finally consented to put it up when he went to bed. But his devout mother was not prepared for the variation he sprung when he was saying his prayers:

"Give us this day our daily bread—yo ho ho and a bottle of rum!"—*Portland (Ore.) Telegram*.

What Are the Best Preparations for the Ordeal, Henry?—Yet this talk with Dean's friend, unsettling somehow, seemed to rake up the whole matter afresh; now he couldn't seem to get it out of his mind. Doing about, making his preparations for a dreary hour with THE LITERARY DIGEST, George's thoughts turned back for the hundredth time.—From "Saint Teresa," by Henry Sydnor Harrison.

Merciless.—"You say that this man has a grudge against you?" demanded the judge.

"Yes, your honor," replied Bill the Beggar. "When I was blind he used to steal the pennies from my cup, and when I was a cripple he'd run down the street with my box of pencils."

"Anything else?"

"Yes, your honor. Once when I was deaf and dumb he shot off a firecracker underneath me."—*American Legion Weekly*.

Repeated History.—"That is rather an extreme gown Miss Golden is wearing. Do you notice how it is held up by a single strap over one shoulder?"

"Yes, and it reminds me of old times. I knew her grandfather when he had but one suspender and wore it just the same way."—*The Christian-Evangelist (St. Louis)*.

When K. of K. Saw a Joke.—When Kitchener of Khartoum returned from India to England by way of Japan and the United States in 1910, efforts to interview him began as soon as he set foot on these shores. His lordship abhorred publicity and detested reporters. Their enterprise

Seeing Snakes, Anyway.—GUIDE—"This is the Laocoon."

TOURIST—"Looks as if he'd got mixed up with his still."—*New York Herald*.

Bygones Are Bygones.—The geological expert who points out that ages ago, before the seas swept between them, Ireland and England were one, is advised to let the matter drop.—*Punch (London)*.

Righting a Cruel Wrong.—Burglars are now said to be carrying means of testing plate and gems. The profession has been too often imposed upon by the cheap and trashy stuff left about in some houses.—*Punch (London)*.

So Say We All.—"Is Life Possible on Everest?" asks a newspaper heading. If it is, Everest is the place for us.—*Punch (London)*.

The Kneadfuls.—To be college bred means a four-year loaf, requiring a great deal of dough, as well as plenty of crust.—*Hamburg*.

More than Willing.—"Sir, would you give five dollars to bury a saxophone player?"

"Here's thirty dollars. Bury six of 'em."—*Judge*.

Keen Competition.—It is said that sharks will not bite a swimmer who keeps his legs

in motion. The difficulty of course is to keep kicking longer than a shark can keep waiting.—*Punch (London)*.

Diplomacy.—"Ten guineas! My husband would never buy me a ten-guinea hat!"

"Oh, yes, he would, my dear, if you started off by asking him for a Rolls-Royce."—*London Opinion*.

Nothing Long Drawn-Out.—"Did you interview the eminent statesman?"

"Yes."

"What did he have to say?"

"Nothing."

"I know that. But how many columns of it?"—*Louisville Courier-Journal*.

Extraordinary Prejudice.—"If Russia is to get help," said Lloyd George, "Russia must not outrage the sentiments—call them prejudices if you like—of the world. What are those prejudices? I will name one or two, for they were all trampled on in the Russian memorandum. The first prejudice we have in Western Europe is this—if you sell goods to a man, you expect to be paid for them. The second is, if you lend money to a man, you expect he will repay you. The third is, if you go to a man who has already lent you money and say, 'Will you lend me more?' he will say, 'Do you promise to repay what I gave you?' And you say, 'No, it is a matter of principle with me not to repay.' There is a most extraordinary prejudice in the Western mind against lending any more money to that person."—From a New York Times report of the Genoa Conference.

resulted in nothing more exciting than K. of K.'s reiterated assertion that he thought the United States an amazing country—was fascinated by its people, charmed with its scenery, and bewildered by its vastness. When Kitchener's train reached the old Wells Street Station at Chicago fifty South African war veterans waited to welcome their former commander. Wearing a gray tweed suit of becoming shapelessness and a floppy golf cap, Kitchener descended the Pullman steps and was surrounded. The main thing was to get an interview and a good picture. "Sorry, can't talk," snapt Kitchener; "against orders, y'know—soldier—on duty—that sort of thing—photograph? Lord no! Can't really—sorry, y'know—awfully." Nate Meissler, the photographer, was horrified. Something must be done. Kitchener was already starting for the gate with his escort. Meissler waddled after him. "Lord!" shrieked the fat little camera-man, "Lord! Oh, my lord! Oh, dear lord! Just a minute, lord!" He chanted it like a prayer. Kitchener stared coldly at his pursuer. Suddenly the hard Kitchener lips quivered, and—epochal event!—Kitchener laughed. He literally shook. "Curious chap, that!" remarked his lordship to the escort as he strode away, still chuckling. "That's no way to address a lord," some one said to Meissler. "You should have called him your lordship." "Lord Ship or whatever else," grinned Nate. "I didn't get his name, but I got four plates." And that is how a Chicago newspaper happens to possess the only laughing picture of Earl Kitchener in the world.—*The Argonaut (San Francisco)*.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. B. C.," Kansas City, Kan.—"Please give me the correct pronunciation of the word *copra*—the dried meat of the coconut."

The word *copra* is pronounced *kop'ra*—*o* as in *not*, *a* as in *final*.

"C. M.," Monju, Korea.—"What is the meaning, pronunciation, and derivation of the word *runcible* as found in Edward Lear's 'The Owl and the Pussy-cat'—"

'They dined upon mince and slices of quince,
Which they ate with a *runcible* spoon?'

The word *runcible* means "Designating a spoon or fork having three broad tines: probably a variant of *runcinated*." The word is pronounced *run'si-bl*—*u* as in *but*, *i* as in *habit*. It is one of a class of words like "quanglo wangle" "youghy boughy," etc., used by Mr. Lear in writing nonsense verses.

"T. J. E.," Pittsburgh, Pa.—"Can you tell me how the custom of eating eggs on Easter originated? I have looked in vain for the information in several encyclopedias."

"Because the use of eggs was forbidden during Lent, they were brought to the table on Easter Day, colored red to symbolize the Easter joy. This custom is found not only in the Latin but also in the Oriental Churches. The symbolic meaning of a new creation of mankind by Jesus risen from the dead was probably an invention of later times. The custom may have its origin in paganism, for a great many pagan customs, celebrating the return of spring, gravitated to Easter. The egg is the emblem of the germinating life of early spring. Easter eggs, the children are told, come from Rome with the bells which on Thursday go to Rome and return Saturday morning. The sponsors in some countries give Easter eggs to their god-children. Colored eggs are used by children at Easter in a sort of game which consists in testing the strength of the shells. Both colored and uncolored eggs are used in some parts of the United States for this game, known as 'egg-picking.' Another practise is the 'egg-rolling' by children on Easter Monday on the lawn of the White House in Washington."—*The Catholic Encyclopedia*.

"E. T. H.," Richmond, Va.—"In regard to the spelling of a river in the eastern part of Virginia which flows into the York, is *Mattaponi* or *Mattapony* correct?"

The correct spelling is *Mattaponi*.

"A. C. P.," San Quentin, Calif.—"In using the word *perfected* in the following, 'Love is *perfected* in us,' and 'Perfected praise,' both being Bible quotations, what is the correct pronunciation?"

The word *perfected* is correctly pronounced *pur'fekt-ed*—*u* as in *burn*, *e's* as in *get*; or *par'fekt'ed*—*a* as in *final*, *e's* as in *get*—the second pronunciation is now infrequently used by careful speakers.

"C. E. L.," Fordville, N. Dak.—The correct pronunciation of the word *safety* is *sef'ti*—*e* as in *prey*, *i* as in *habit*.

"N. L.," New York, N. Y.—"Please tell me whether *memorandums* is correct as the plural for *memorandum*? Also, what is the correct plural for *index*?"

The plural of *memorandum* is either *memoranda* or *memorandums*. The word *index* has two plurals—*indices* in the sense of mathematical or other abstract signs; *indexes* in the sense of tables of contents.

"A. P. V.," Fort Myers, Fla.—"What is the meaning of the phrase *riparian rights*?"

The phrase is defined as—"The rights, varying locally, accruing to an individual whose property borders on or contains a watercourse, river, etc., as to the use of such waters."

"M. E. L.," High Point, N. C.—The term *Pomeranian* is correctly pronounced *pom'a-re'ni-an*—*o* as in *not*, *a's* as in *final*, *e* as in *prey*, *i* as in *habit*.

the world's standard

The FRANKLIN SEDAN

AT THE NEW PRICE

\$2850

THE finest Franklin in 20 years of quality manufacture—at the lowest price in its history, except for four months in 1916.

The first car of this type, suitable for all-round use, in America. Light, flexible and direct air-cooled—no radiator—it is more widely usable than any other car, enclosed or open. Cool in summer.

From its very beginning, the most popular enclosed car built, in proportion to total output. Last year Sedans formed 42½% of Franklin's entire production.

If you have never owned a Franklin Sedan, you do not yet know how much a car can do, how well it can do it, nor how little that service need cost.

* * *

Motorists' desire for better service made April, 1922, Franklin's biggest April. And as we go to press, still another record is broken. On May 1, over three times as many Franklins were delivered as in any previous day on record.

*Touring Car \$1950 Demi-Coupé \$2100 Runabout \$1900
Demi-Sedan \$2250 Coupé \$2750 Brougham \$2750
Touring-Limousine \$3150 (All prices f. o. b. Syracuse)*

FRANKLIN AUTOMOBILE COMPANY
SYRACUSE, N. Y.

How often is this human tragedy enacted—little children in smoke-filled windows crying for rescue? When is it due to happen in your city?

All that was humanly possible

AFTER the fire in the Ninth Ward school was anybody tarred and feathered? After the heroism of teachers and firemen—after the impressive funeral of the little victims who perished—after the debris ceased to smoke and other visible reminders of the tragedy were gone—after the official investigation and the report—what reforms were recommended?

Did the report exonerate officials and attempt to clear the city of the disgrace?

Did it say, "Fire escapes and everything that was humanly possible had been done to safeguard the school against fire"?

If so, the fathers and mothers of the victims would like to cry out in protest and reproach, "Everything was NOT done that was humanly possible." The simplest, sanest, surest thing of all was not done.

If the fire had started in a business building owned by a private individual instead of a public building owned by a lot of taxpayers, it would have been put out quickly by automatic sprinklers. Mere merchandise gets the protection of the finest

fire-fighting device ever devised because the insurance expense is thereby cut from one-half to nine-tenths. But human beings in schools and hospitals must trust to their own cool-headedness under panic conditions or to the lucky chance of some heroic rescue.

When human life and not mere merchandise is at stake, nothing else should be considered but this system—the highest type of fire-fighting device ever devised—the Grinnell Automatic Sprinkler System. It is automatic! The heat of the fire works it. It is always on guard. Always ready. No human aid is required. When the fire starts the water starts!

Read—"Fire Tragedies and Their Remedy"

Write today for "Fire Tragedies and Their Remedy" and learn from the records the necessity for protection that protects. Pass this book along to your friends, and have it read aloud in your lodge, your Rotary or Kiwanis Club, your Chamber of Commerce, your school and hospital boards. Address Grinnell Company, Inc., 274 West Exchange Street, Providence, R. I.

NEW-THOUGHT BOOKS

Books designed to free the mind and give it a determining and controlling force in self-uplifting efforts

The Latest Thought on Mental Control of Health

The Will to Be Well

By CHARLES BRODIE PATTERSON

"Christian Science denies away sin, sickness, and death. The 'New Thought' claims that all three have an existence, but an existence that is overcome, not through any process of denial, but through the introduction of true thought into the mind of man"—*St. Paul Dispatch*.

8vo, Cloth, 297 Pages. \$1.75 net; by mail \$1.85

The Latest Work on the Relation of Mind to Disease

**The Mental Factor in Medicine
OR THE FORCE OF MIND**

By A. T. SCHOFIELD, M.D., M.R.C.S.E.

"The author has in this new and striking work greatly developed his theory as to the tremendous importance of the mental factor in the causation and the curing of diseases."—*Church Family Newspaper*.

12mo, Cloth, 347 Pages. \$2.00 Postpaid

How to Attain and Maintain Perfect Health

**Nerve Control and How to
Gain It**

By H. ADDINGTON BRUCE

An expert explanation of the causes and symptoms of all nervous troubles and simple, direct instructions for their relief.

Cloth Bound. \$1.25 net; by mail \$1.37

A Message of Vital Help to All Nerve Sufferers

Nerves in Disorder

And How to Get Them in Order

By A. T. SCHOFIELD, M.D., M.R.C.S.E.

This book seeks to dispel ignorance regarding all functional nerve diseases, and to set forth scientific principles for successfully treating these troubles.

"The reading of this book will do much to relieve the needless sufferings of nervous people which are due to a lack of understanding of the disease."—*Boston Evening Transcript*.

12mo, Cloth, 218 Pages. \$1.50 postpaid

Dr. Schofield's Latest Book

The Home Life in Order

By A. T. SCHOFIELD, M.D., M.R.C.S.E.

Dr. Schofield's new volume deals with subjects of pressing and every-day importance and interest to all. He writes not alone of the household and its hygiene but of the human body as to its organization, functions and needs, in the matter of care.

12mo, Cloth, 345 Pages. \$2.00 Postpaid

"A Masterly Work on an Important Subject"

The Unconscious Mind

By A. T. SCHOFIELD, M.D., M.R.C.S.E.

The relation of the unconscious mind to therapeutics, education, disease, sex, character, is fully described.

8vo, Cloth, 451 Pages. \$3.00 postpaid

"A Message of Hope and Optimism"

The Measure of a Man

The Philosophy of Mental Healing

By CHARLES BRODIE PATTERSON

The author has a message of greater life and light, and his doctrine seeks to prove that the very mistakes and sins of men tend to bring them to the fuller and more complete life.

8vo, Cloth, 326 Pages. \$1.75; by mail \$1.85

"A Work of Vast Importance"

**Psychic Treatment of Nervous
Disorders**

By PAUL DUBOIS, M.D.

Translated by SMITH ELY JELLIFFE, M.D.
and WILLIAM A. WHITE, M.D.

This work gives the experiences and principles of psychic treatment of nervous disorders, based upon twenty years of successful specialization and practice in this branch of medical skill.

8vo, Cloth, 471 Pages. Copious Index. \$3.50 net; by mail \$3.65

The Ever-Present Christ in Spiritually-Minded Men

The Next Step in Evolution

The Present Step. Evolution—A Study

By I. K. FUNK, D.D., LL.D.

The author believes that "Christ came the first time into men's vision by coming on the plane of their sense: He comes the second time into men's vision by lifting them up to his plane of spiritual comprehension."

16mo, Cloth. 75 Cents postpaid

The Spiritual Gospel of Jesus the Christ

**Spiritual Knowing; or Bible
Sunshine**

By THEODORE F. SEWARD

This is the most effective interpretation yet presented of the religious ideas and impulses that are finding expression in the various movements known as Christian Science, Divine Healing, and Mental Healing.

12mo, Cloth, 144 Pages. \$1.00 postpaid

"A Book of Inspiration"

Builders of the Beautiful

By H. L. PINER

The correspondence of physical form and spiritual nature. A book for the home, the heart, and the life, a new philosophy of beauty, beautiful in sentiment, logical in conclusions, sane, but idealistic in doctrine.

12mo, Cloth, 303 Pages. \$1.50 postpaid

Adapted to the Layman and the Physician

**The Influence of the Mind on
the Body**

By DR. PAUL DUBOIS, University of Berne

Translated by L. B. GALLATIN

Cloth. 75 Cents net; by mail 81 Cents

Meaning of the Christian Science Movement

**How to Get Acquainted
with God**

By THEODORE F. SEWARD

This work treats of the laws of the Divine Immanence, or "God with us."

16mo, Cloth, 147 Pages. 50 Cents postpaid

Practical and Inspiring

Pathways to the Best

By CHARLES L. GOODELL, D.D.

Twenty-six brief sermons, the output of a clear brain and strong heart, for people who would know what it means to live.

Cloth. \$1.50 net; by mail \$1.60

A Look Straight into the Heart of Human Nature

Being With Upturned Face

By CLARENCE LATHBURY

The spiritual uplift resident in each individual. Man is fundamentally, because physically, an animal; but he differs from other animals in that he has a face upturned to the infinite.

12mo, Cloth, 70 Pages, Uncut Edges. \$1.00 postpaid

Fresh and Inspiring

Broadcast

By ERNEST H. CROSBY

A collection of verses, pictures, messages, and meditations on the higher life.

12mo, Cloth. 75 Cents postpaid

Which of these two men has learned the secret of 15 minutes a day?

The secret is contained in the free book offered below. Until you have read it you have no idea how much 15 minutes a day can mean in growth and success. Send for your copy now

HERE are two men, equally good-looking, equally well-dressed. You see such men at every social gathering. One of them can talk of nothing beyond the mere day's news. The other brings to every subject a wealth of side light and illustration that makes him listened to eagerly.

He talks like a man who has traveled widely, though his only travels are a business man's trips. He knows something of history and biography, of the work of great scientists, and the writings of philosophers, poets and dramatists.

Yet he is busy, as all men are, in the affairs of every day. How has he found time to acquire so rich a mental background? When there is such a multitude of books to read, how can any man be well-read?

The answer to this man's success—

and to the success of thousands of men and women like him—is contained in a free book that you may have for the asking. In it is told the story of Dr. Eliot's great discovery, which, as one man expressed it, "does for reading what the invention of the telegraph did for communication." From his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, Dr. Eliot tells just what few books he chose for the most famous library in the world; why he chose them, and how he has arranged them with notes and reading courses so that any man can get from them the essentials of a liberal education in even fifteen minutes a day.

The booklet gives the plan, scope and purpose of

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

The Fascinating Path to a Liberal Education

Every well-informed man and woman should at least know something about this famous library. The free book tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education"; how he has so arranged it that even "fifteen minutes a day" are enough; how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward and it showed me besides the way to a vast new world of pleasure."

Every reader of *The Literary Digest* is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

Send for this
FREE booklet that gives
Dr. Eliot's own plan
of reading

P. F. COLLIER & SON COMPANY, Publishers of Good Books Since 1875

P. F. COLLIER & SON COMPANY
416 West Thirteenth Street, New York

By mail, absolutely free and without obligation, send me the little guidebook to the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books, and containing the plan of reading recommended by Dr. Eliot of Harvard.

The Literary Digest School and College Directory

"THE GATES OF THE FUTURE
STAND WIDE OPEN"

FOR INSTITUTIONS WHICH BUILD CHARACTER THROUGH EDUCATION AND TRAIN FOR RESPONSIBILITIES OF LIFE THE NEED IS EVER GREAT

LITERARY DIGEST readers seeking private institutions of learning will find in our pages between May 13th and September 9th, the following Classified Directory containing the names and addresses of some distinctive residential schools; vocational, professional, special schools; colleges, and supervised camps. Advertisements describing these institutions will be found in the first issue of each month from May to September.

You are invited to write for information to any of the institutions in which you are interested. We list only such schools as we believe are under highly trained and public-spirited executives. Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary for inquirers to give specific information that may aid us in giving prompt service.

More Deadly Than War

At the Front Over There

**INFLUENZA
ALONE SLEW
More Americans
in a Month Than All
the German Guns**

In the Hospitals Over Here

In the ranks of the battling armies disease has hitherto been as a rule a far more potent enemy than the bullets of the foe. In the Spanish-American war, for every man shot in battle more than *thirteen* died of disease. In the Mexican war six died of disease to one from wounds. In the Crimean war France lost ten men by sickness for every one killed. In our own Civil War two died from disease for each one shot. During the Franco-Prussian war twelve Germans died of sickness to every one killed in battle. But modern hygiene was so far advanced at the time of the Russo-Japanese war that the world was startled by the fact that for the first time in the history of armies there was only one death from disease for every two men who died fighting. In the recent great war sanitation worked on a super-scale and modern hygienic methods kept down the excessive death-rate. In the great battle of Civil, Social, Professional, and Business life, in which the mortality is greater than that of any war, you should fortify yourself against illness and inefficiency.

Every One Should Know How to Keep Well and Fit

HOW TO LIVE

Is The Nation's Foremost Book of Health
New Enlarged Edition

This book was prepared by Professor *Irving Fisher* of Yale and *Eugene Lyman Fisk*, M.D., under the auspices of the Hygiene Reference Board of The Life Extension Institute, which numbers among its members such eminent men as Asst. Surgeon-General *Rupert Blue*, *Russell H. Chittenden*, Yale; *Lewellys F. Barker*, Johns Hopkins; *Alexander Graham Bell*, *Harvey W. Wiley*, M.D., etc.

160,000 COPIES ALREADY SOLD

This thoroughly revised edition of the popular book **HOW TO LIVE** has been enlarged by 116 pages. It is the last word on the subject of health and hygiene. The vital lessons of the war are included here with all the progress made in the recent months. Big business houses, including *U. S. Steel Corporation*, *Sherwin-Williams Co.*, *American Rolling Mill Company*, and many others, are buying it in quantities for their employees.

This Book Tells You How to Keep Well

Over 100
Universities

Colleges, etc.,
use it as a text
in teaching personal
hygiene.

How to Avoid Colds, Pneumonia, etc.
Danger of Hasty Eating
What to Eat and How
Eating to Get Fat
Eating to Get Thin
Hygiene in the Home
Outdoor Living and Sleeping
How to Cure Constipation Without Drugs

Hardening of the Arteries
Deep Breathing and Exercise
Curing Acid in the Blood
How to Cure Insomnia
Treatment for Nervousness
Rules for Good Health
Effects of Alcohol—Tobacco
Blood Pressure

State Boards of Health Recommend It

The State Boards of Health of Indiana, Kentucky, Louisiana, Pennsylvania and New York endorse and recommend it.

A copy was purchased for every official of the Pennsylvania State Board of Health. Dr. A. T. McCormack, Secretary of the Board of Health of the State of Kentucky, read it and then immediately ordered 12 more copies for some friends. When a member of such a responsible body as the State Board of Health does such a thing you can readily appreciate how valuable the book must be.

One Man Ordered 3,100 Copies

Prof. Robert T. Legge, Department of Hygiene, University of California, Berkeley, Cal.: "I wish to compliment the publishers as well as the authors for producing this timely live book. I have adopted it as a text-book for my freshman classes next semester, and have placed an order with our cooperative store to have on hand at least one thousand copies for the coming semester." Since this letter was written 2100 additional copies have been ordered.

THE NEW YORK TIMES

says: "A volume, the scientific accuracy of which is vouched for by William J. Mayo, M.D., ex-President of the American Medical Association, Alexander Graham Bell, M.D., Board of Scientific Directors, Eugenics Record Office; Major-Gen. William C. Gorgas, and about ninety other men renowned in the fields of medicine, surgery, bacteriology, industrial hygiene, etc., may well be accepted as the most authoritative epitome thus far available in the great but hitherto neglected realm of individual hygiene."

ABINGDON

*Books of the
Finer Life*

THERE comes to each of us now and again the desire to be reassured of the eternal fitness of life. We would taste of its greater contentments, vision its larger realities, experience its wider sympathies.

From some few books we can derive lasting encouragement. We can turn to them, again and again, as to tried friends, for understanding of our needs.

These books from the Abingdon Press bring sincere and well-expressed truths of life beyond the outer fringe of our own experience.

A HANDFUL OF STARS

By F. W. Boreham

The author appropriates the title of this book from Caliban, who cries out, "O God, if you wish for our love, fling us a handful of stars." And these "stars" are gathered together to make a companion to his volume, "A Bunch of Everlastings," for "it is not good for a book to be alone."

Price, net, \$1.75, postpaid.

WITH EARTH AND SKY

By Bishop William A. Quayle

These are communications from a dweller in the innermost heart of Nature and a friend of God. He has an amazing insight into the Creative Mind and possesses in a marvelous degree the capacity for comprehension and the ability for interpretation. These essays are full of the mystery of the recurring seasons, and of the ineffable glory of flower and field, of mountains, meadow, river and prairie, of star and sun and cloud.

Price, net, \$1.25, postpaid.

THE OPEN FIRE

By William Valentine Kelley

This group of charming and gripping essays constitutes one of the rich and scholarly contributions of William Valentine Kelley to some of the vital discussions of this generation. No more penetrative or appreciative mind has applied itself in our day to the consideration of the sources, influences and products of literature and religion in their reactions upon life, character and civilization.

Price, net, \$2.00, postpaid.

A WINTER OF CONTENT

By Laura Lee Davidson

The story of a woman who had a winter of content, not amid the balminess of Florida or of Southern California, but amid the rigors of a Canadian winter. She lived all alone in a one-room shack on a bluff overhanging a lake. The story of her "winter of content" is one of great charm.

Illustrated. Net, \$1.50, postpaid.

THE STORY OF THE AMERICAN HYMN

By Edward S. Ninde

"This story of the American Hymn is fascinating, covering two centuries when various versions of the Psalms were exclusively used in the churches. . . . An illuminating and valuable study enlivened by humor and enriched by a sympathetic understanding of the different periods of religious thought in America."—New York Evening Post.

Illustrated. Net, \$3.50, postpaid.

RELIGION AS EXPERIENCE

By John Wright Buckham

The chapters that make up this group of addresses and articles have their rootage in one central theme,—that of religion as a personal experience. They are an expansion and explanation of the declaration of the author that "the deeper thought of our time is turning away from religion as dogma, as sentiment, as theory, as ethics, to religion as experience."

*America's
most famous
box of candy*

Whitman's

Sampler invites you—

- to an altogether unusual experience in sweets
- to a candy package which reflects the quaint, odd beauty of the cross-stitch work of long ago
- to an assortment of chocolates and confections quite unlike any other, because it offers in one package the favorite sweets from ten leading Whitman packages
- to a delicious quality in sweets which has been famous ever since 1842 among people who appreciate candies of the better kind
- to that “different” kind of candy package which has a special value, as a gift or when you entertain or when you wish, yourself, to enjoy sweets as good as they can be made

The Sampler, Pleasure Island, Salmagundi and other Whitman packages may be had at that selected store near you which displays the sign *Whitman's*

CLEARING THE TRACKS FOR PROSPERITY

WILL THE PROMISE OF PROSPERITY held out to the country in the proposed railroad rate and wage-cuts be dashed from our grasp by a railroad workers' strike? Or, if that peril is averted, will the continuance of the coal strike make it impossible for industry and business to avail themselves of the opportunity offered by the Interstate Commerce Commission and the Railroad Labor Board? Altho such grave questions as these make themselves heard, our newspapers are virtually unanimous in hailing the rate and wage reductions ordered for July 1 as harbingers of a generally increased activity in all lines of business. They mean, says the Worcester Gazette, "a cut in the cost of overhead for American industry," because "manufacturers can now bring raw materials to their plants more cheaply, and get the finished product to the retailer at a reduced expense." Coal, notes this Massachusetts paper, "can now be moved at a much less killing cost; but while the operators and miners are at grips the coal isn't being got out." "While the Commerce Commission gives us air," it adds, "the coal strike shuts off our windpipe." Meanwhile hundreds of thousands of railroad workers are voting on whether to accept the wage-cuts recommended by the Labor Board, or to paralyze business further by following the example of the miners.

The average 10 per cent. cut in railroad freight rates will mean a saving to the American shipper, variously estimated in Washington dispatches at from \$250,000,000 to \$400,000,000. "Freight rates," remarks the Grand Rapids Herald, "constitute the most constant factor in all commodity prices, and have been one of the major contributors to the high cost of living." "Demands of the business world for lower costs of transportation have been imperative for more than a year," the Cincinnati Enquirer reminds us. No one but the rail executives will deny the necessity for this downward revision, says the New York Globe, which is convinced that high rates have been damming the streams of commerce. For these reasons, thinks the Kansas City Journal, the finding of the Commerce Commission "is glad news for the farmer, for the laborer, for the business man and for the average consumer." It should cause "an almost immediate reaction in better business conditions," says the Washington Herald, which offers the following cheerful prophecy:

"Now will come a scramble to take advantage of the new rates. A heavy movement of all sorts of commodities should start July first and continue until the markets throughout the country are flooded with goods. Then it will be the duty of wholesaler and retailer to reduce prices in accordance with the lower costs.

Thus will come more prosperity for the public, who will resume buying and put money into circulation."

The new rates "will particularly foster the building industry," says the New York Tribune; and the Philadelphia Public Ledger agrees that "heavy commodities, bricks, lumber and building materials in general, that have been tied to a short radius of distribution, are expected to be affected first." The reduction, notes the Pittsburgh Dispatch, "tends to help close that wide gap between agricultural prices—the basic value—and prices in manufacturing industries." The Detroit News notes that the response of business the country over "has been in a tone of rejoicing"; and it predicts that the railroads themselves will be better off than before, because of the increased shipments that will result from this stimulus. "Optimistic business men have now new cause for confidence," declares the Seattle Post-Intelligencer, which goes on to say:

"American business and industry have been making slow but certain progress for a year or more. Recently the times appreciably brightened. There is plenty of money in the country awaiting action, foreign and domestic trade are increasing slowly, and now comes along a wonderful accelerator of American business in the shape of cheapened transportation rates.

"Farmers and lumbermen have been long moving for lower freight rates. The farmer's short margin of profit will be appreciably increased. To our lumber-mills lower Western rates mean increased shipments of their products to the great lumber markets of St. Paul, Minneapolis, Kansas City and Omaha. And eastward the new advantage is only slightly less. To the railroads, too,

the new rates will mean the acquisition of new business.

"Not only is our business and industrial domestic situation rapidly clearing, but the world's markets are improving. The war nations are recovering from their wounds, and normal conditions are returning."

The rate-cut will save millions of dollars, concedes the Minneapolis Minnesota Star, "but the question remains as to how this saving will be distributed." Says this labor daily:

"Take the case of coal in which the ordinary person is directly interested because he is frequently a direct consumer of the commodity. The office of the State railroad and warehouse commissions figures the new freight rates will reduce the cost of soft coal coming to Minnesota by the lakes route from 80 to 85 cents a ton, and the cost of hard coal from 60 to 65 cents a ton. Will this saving or a fair proportion of it be passed on to the consumer?

"We shall have to wait to see. The Interstate Commerce Commission has no control over the prices of goods. There is no machinery to control the distribution of savings in costs."

Other editors warn us not to expect a real business boom until the European atmosphere is clear, since this country can

THE improvement or deterioration in the manners and morals of our young people during the past year has been made the subject of a nationwide inquiry by THE LITERARY DIGEST among college presidents, college deans, student editors, school principals and editors of the religious press. Hundreds of thoughtful and earnest replies have been received covering the entire country, and the results will be published in two striking articles in our next two issues. The first, entitled "The Case Against the Younger Generation," will appear next week. Every parent, pastor, and teacher, to say nothing of the young people themselves, will find these articles of supreme interest and value.

not consume the entire output of its factories and we must look abroad for markets. And *The Railway Age*, a leading railroad organ, urges that something should now be done about the coal strike, since "the roads are at present losing at least 80,000 cars of coal traffic weekly." On May 15, according to the report of the American Railway Association, there were 512,190 freight cars idle because of business conditions.

In the main, however, the news columns agree with the editorial pages in taking a roseate view of the outlook. According

months there will not be an unemployed worker in the United States. It is not expected, of course, that the volume of business will reach at any time in the near future the maximum that America had during the height of the war. That was abnormal. But it is predicted and with great confidence that America will shortly reach a volume of business activity and degree of prosperity far above what this country had before the war began. If the war had not occurred, and if there had been merely the normal peace-time increase from year to year, the volume of business of 1923 would not have been greater than what is now predicted for that year.

"American business is about to go forward on what is to be its post-war normal basis. America is past all the abnormalities. America is completely through with both the abnormal inflation of the height of the war and the equally abnormal deflation that followed immediately after the war. This new normal basis for the future is to be much better than was commonly expected. The departments of the Government which have charted this matter carefully show that in the final net result America has suffered almost nothing by the interruptions and dislocations of the wartime period.

"The volume of business for 1923 promises to be at the point where it would have been if the war had never taken place. The year 1923 is expected to show the same increase in volume over 1913 that would normally have taken place through the gradual increases of ten normal years.

“But while America is to be normal as compared with her own past, America is to be much more than normal compared to other countries. If the volume of business done by each of the countries of the world in 1913 be taken as the basis, it is found that America is relatively much further ahead of that basis than any of the other nations are.”

The 10 per cent. rate-cut announced by the Interstate Commerce Commission goes into effect on July 1. On the same date, by an independent decision of the Railroad Labor Board, the wages of at least 400,000 railroad employees will suffer an average reduction of five cents an hour, which represents a saving to the railroads estimated at more than \$48,000,000. This cut applies to the maintenance of way employees, but wage reductions for other classes of railroad labor are also predicted. The Labor Boards' decision was signed by the six members representing the railroads and the public, but the three members representing labor filed a dissenting opinion. Even after the reduction, says the majority report, the purchasing power of the wages of maintenance of way employees will be 44.5 per cent. over the

purchasing power of their wages in 1917. Moreover, reads the decision—

“The Board is of the opinion that after the reductions made under this decision common labor on the roads will still be receiving, as a rule, a wage in excess of that paid to similar labor in other industries, and that the same will be true of all other classes of labor covered by this decision.

"The Board is of the opinion, however, that the hazards and hardships of the employment, the training and skill required, the degree of responsibility to the public and other elements mentioned in the Transportation Act of 1920 combine to justify the payment of a better wage to these employees than is paid to similar labor in outside employment."

But the dissenting minority opinion offers figures to show that the purchasing power of the reduced wages will be only 15.9 per cent. higher than the purchasing power of the wages of 1917; and it declares that "The rates of pay established under this decision will mean annual earnings far below any minimum standard of subsistence which has been formulated, even below those of most conservative employer groups."

President E. F. Grable of the Brotherhood of Maintenance of Way Employees and Railway Shop Laborers told an Associated

to a Washington dispatch to the *New York Globe*, "Government officials and economists look upon the freight rate reductions ordered by the Interstate Commerce Commission as distinctly encouraging to the prospect of a revival of business. They believe it will have an immediate effect in stimulating industry and increasing the movement of freight from points of production to consuming centers." Another Washington dispatch to the *Chicago Journal of Commerce* tells us that "according to estimates of the American Farm Bureau Federation, the farmer alone benefits by approximately \$127,000,000 a year on goods that he buys normally." The *Wall Street Journal* estimates that the rate-cut "should reduce steel-making costs an average of at least \$1.25 a ton." And Mark Sullivan, Washington correspondent of the *New York Evening Post*, quotes business men and economists who regard the railroad rate and wage-cuts as removing the last impediments to business recovery left us by the war. Says Mr. Sullivan:

"It is believed that with these two embarrassing factors re-adjusted the way is clear for a thorough-going resumption of maximum business activity. It is predicted by those who speak with most authority in this field that in the course of a few

Press representative in Detroit that the wage-cuts were "unwarranted and unfair," because they would reduce wages on an average 13.2 per cent. while living costs the country over, he insisted, had not declined more than 3 per cent. As Samuel Gompers, President of the American Federation of Labor, sees it, labor is to pay for the freight-rate reductions. Says Mr. Gompers:

"It is a most unjust and inequitable proceeding. The minority decision, which says that the new wage will not allow the father of a family to purchase as much food as is allowed an inmate of the Cook County Jail, leaves little to be said in characterization of the majority's action.

"It is announced that the reduction just ordered amounts to 13.2 per cent. My calculation shows that the wages of the lowest paid, those getting 28 cents an hour, are to be reduced 17.8 per cent., down to 23 cents an hour. Those least able to stand the loss are hit hardest.

"The railroad workers waited until July 20, 1920, for an increase in wages. During the four years preceding the cost of living had been rising steadily. The railroad workers had been compelled to bear this increased cost without any compensating wage increase. It is proposed now to put wages back where they were before the increase of 1920.

"No one will contend that it costs less to live now than in 1920. The fact is there has been almost no appreciable change in the cost of living, so far as the average family is concerned. Rent, the largest single item for every family, remains as high as ever, and in most cases is higher.

"The decision penalizes the workers and helps the railroads."

The Socialist New York *Call* denounces the wage reduction as "an outrage," and the Allentown *Pennsylvania Labor Herald* says that the lower pay will force railroad laborers to work ten or twelve hours a day in order to earn enough to support their families. To quote this Pennsylvania journal:

"If these men work ten hours per day they will have a daily wage of \$2.30 and for one week's work they will have a sum of \$13.80, that is, if they have the privilege of taking Sunday off to go to church and thank God for his wonderful blessings to them. The railroad laborers can either accept longer hours, or take their children out of school and put them in the factories, or they can put their wives to work, so that between the men, women and children all working at 'normal' wages, enough is earned to feed, clothe, and support a family as we are told Americans should live."

But the Boston *Post* remarks that "it seems quite conclusively proved in the mass of data presented that whatever might be said as to the relation of railroad wages and cost of living, the railroad men were getting considerably higher wages than workers in other lines of industry doing similar work." And the New York *Evening World* reminds us that "even the labor members of the Labor Board admit the purchasing power of the new wages will be 15.9 per cent. higher than the purchasing power of the wages of 1917." The reduction "is manifestly in accordance with the logic and equities and exigencies of the situation," argues the Philadelphia *Enquirer*.

In declaring for a general wage reduction of 10 per cent. in freight rates, the Interstate Commerce Commission said in part:

"We are of opinion that general reduction in the rate level, as substantial as the condition of the carriers will permit, will tend not only to lessen the transportation burden, but also to equalize and stabilize the conditions under which commerce and industry are carried on, with consequent fuller assurance to the carriers of realizing the fair return contemplated by the law. . . .

"Freight rates and charges herein determined will enable the carriers in the respective rate groups under honest, efficient and economical management and reasonable expenditures for maintenance of way structures and equipment, to earn an aggregate annual net railway operating income equal, as nearly

as may be, to a return of 5.75 per cent. upon the aggregate value of the railway property of such carriers held for and used in the service of transportation."

Chairman McChord, of the Interstate Commerce Commission, express the opinion that railroad freight rates on basic commodities should be still further reduced, and that "reductions should also be applied to passenger fares." And in the New York *Analyst* we read:

"Even with the decreases ordered, the rates which the railroads retain are greatly in advance of rates the management of any of the carriers would have hoped for at this time prior to the

changes in the economic fabric of the nation incident to the World War. Even with the present wage schedules the railroads are left in a position where they are obtaining revenues for which few precedents can be found. . . .

"It is significant that the tone of the Interstate Commerce Commission decision indicated that the Commissioners felt that the rate-cuts ordered were less than they would like to have granted for the welfare of business. Certainly there was nothing in the decision to indicate that any of the Commissioners felt that a serious blow had been dealt at the solvency of the lines."

On May 24, when the Commission's ruling was announced, the recent history of railroad rates and railroad wages was reviewed in a Washington dispatch to the New York *Herald*:

"Since the enactment of the Transportation Act the Interstate Commerce Commission has made four sweeping rate reductions and several minor ones. It is estimated the reductions previously ordered have resulted in a lessening of revenue to the roads of approximately \$186,000,000, and that the reduction ordered to-day will lop off \$225,000,000.

"In the same period the Railway Labor Board, following the wage increase of 22 per cent. made in 1920, has made one wage reduction of 11 per cent., or half of the increase of 1920. The railroads now have an application pending for a further wage reduction of 11 per cent., which the board is considering. It is estimated the reduction made and the one proposed would add to the revenues of the roads approximately \$350,000,000 or \$400,000,000, balancing the loss of revenue suffered by reduction in rates."

THE HALT IN THE PRICE DROP

ONE HORROR OF WAR which directly affected each one of us was the rise in the cost of living which began about a year after the German Army invaded Belgium and France. That the same thing happened to other generations who lived through great wars—as shown by the chart on this page—made the hardship no whit the less. For five years, as indicated by the ascending curves in the diagram at the top of the next page, wholesale prices and retail prices went up the hill like Jack and Jill. What this meant to everybody's dollar is shown by the third diagram. To some there was, of course,

compensation in greater profits and increased wages, but to the great mass of consumers depending on not easily readjusted salaries and fixt incomes, the high prices spelled distress and deprivation—at least enforced economies. When the fighting stopt there was a temporary drop in priees, but this did not last long, nor go far, and with the after-war business boom, the price ascent continued until it reached its peak in the Spring of 1920. At that time wholesale prices in this country were more than double those of 1914 and the dollar in the pay envelop bought less than fifty cents' worth of food or rent. Then, as shown on all three of the charts, there began the sharp price drop which lasted almost exactly a year. It started with whole-sale quotations and a little later the execrated H. C. L. came tumbling after. But this downward rush has now slackened, almost stopt. All the price indices show little change of late, and some indicate a slight rise.

That this slowing up means an equalization of prices, which all agree would be a good thing for business, is stoutly affirmed by some and no less strongly denied by others. All the available evidence for the time being, says a writer on the New York *Evening Post's* financial page, points to an upward trend of prices throughout the world. But this, say others, does not mean that the after-war decline has really stopt. The President of the Associated Advertising Clubs of the World is one of the latter. He has been carefully watching tendencies while on a fifty-thousand-mile trip through this country and Canada, and tells a gathering of business men, as quoted in the New York *Times*, that the best message they can send to their customers is this:

"If you people are going to stop buying until priees reach the bottom you are going to stop living, because the price line will go down for thirty years. You might just as well start buying right now."

This gentleman's views are to some extent sustained by the chart on this page showing the thirty-year decline which followed the conclusion of the Napoleonic and Civil wars.

Now let us look into this matter of prices a little more closely and see to what extent other authorities back up the diagrams which put the general situation so clearly. Different computers use different combinations of commodities, and different methods of computation, so that their figures do not always exactly agree. But generally speaking, as the New York *Evening Post* notes, "wholesale prices hold firm," at a level several points above the low reached a year ago "when the long downward sweep in prices was checked." A comparison of wholesale prices by three leading authorities is printed on *The Evening Post's* financial page as follows:

	Bradstreet's Index	Change	Dun's Index	Change	Bureau of Labor Index	Change
Av'ge, 1913	100		100		100	
Jan. 1, 1922	123	+0.5	136	0.0	149	0.0
Feb. 1....	124	+0.4	137	+0.3	148	-0.7
March 1...	126	+1.5	141	+2.9	151	+2.0
April 1...	125	-0.6	138	-2.0	152	+0.7
May 1....	127	+1.5	139	+1.1	152	+0.0
May 1, '21.	118	-4.9	138	-4.4	154	-4.9

The price estimates made by the Federal Reserve Board show less than one per cent. advance in March in wholesale prices, and 1.4 per cent. in April. The Department of Labor's April figures showed declines in whole-sale foodstuffs, farm products, clothing and furniture, only metals and chemicals advancing. The Department of Agriculture reports ten principal farm products advancing in price at the source of production during April. This, we read

in *Science Reports*, is partly seasonal and partly "the result of improved conditions for the entire industry of agriculture." To quote further:

"The April increase follows a steady climb of prices paid farmers for their products, which began last fall. The climb is taken to indicate that agriculture has passed completely beyond the low point of depression."

This is very fine for the people who produce food. But how about the consumer? What has been happening to the cost of living is graphically shown in the two diagrams on the next page. The National Industrial Conference Board, which prepared them, comments as follows:

"Between July, 1914, and July, 1920, the cost of living among the wage-earners' families in the United States rose 104.5 per cent. From July, 1920, there was an almost steady decline to March, 1922, when the cost of living was 54.7 per cent. above the 1914 level. Between July, 1920, and November, 1920, the average cost of living decreased 5.6 per cent.; between November, 1920, and March, 1921, there was a decrease of 12.6 per cent.; between March, 1921, and July, 1921, the decrease was 3.3 per cent. The decline between July, 1921, and November, 1921, was almost negligible, a decrease of less than one-tenth of one per cent. This was followed by a decrease of 5.1 per cent. between November, 1921, and March, 1922. It is seen, therefore, that the decrease was more rapid in the first year of the downward movement of prices than during the later months, but, due largely to the marked decline in food prices between November, 1921. and March, 1922, the decrease in the total cost of living within this four-month period exceeded that of similar periods immediately preceeding. The total decrease in the cost of living between July, 1920, the peak of high prices, and March, 1922, was 24.4 per cent."

On April 15 living costs were practically idential with those for the month before, thus bringing to at least a temporary halt the decline which had been going on for nearly two years.

As a whole, the cost of living is, according to the National Industrial Conference Board, 24 per cent. lower than at the peak, but 54.8 per cent. higher than before the war. Wholesale prices on the other hand have fallen about 44 per cent. from their peak and now average 52 per cent. above the pre-war level. The changes in the chief items entering into the cost of living are:

	All Items	Per cent Charge	Food	Shelter	Clothing	Fuel, Light	Sundries
July, 1914.....	100		100	100	100	100	100
Peak, 1920.....	204.5		219	166	288	200	192
January, 1922....	161.4	—0.8	150	169	156	178	178
February.....	157.7	—2.3	142	169	156	177	177
March.....	154.7	—1.9	139	165	154	174	174
April.....	154.8	0.0	139	165	155	174	174
April, 1921.....	167.6	—0.7	156	171	169	179	185

The Conference Board notes a slight increase in clothing prices, but dealers are said to be of the opinion that there will be little or no change in clothing prices in the next few months, and real estate operators report the same regarding house rents. The cost of coal will, of course, depend upon the strike. In fifteen out of nineteen of our representative cities the United States Bureau of Labor Statistics reported increased food costs between March 15 and April 15. This draws from a labor weekly, the *Cleveland Citizen*, the remark that "the boasted drop in food prices during the past year is not sustained by the Bureau, despite the fact that many farmers have been ruined because of low prices."

Now that mention is being made of certain specific commodities, we are reminded that prices are not yet equally readjusted. And permanent prosperity, says Mr. Byron W. Holt, speaking for various economic authorities, "can come only when prices of different classes of commodities are equalized so that each class of producers can purchase its normal share of the products of all the classes of producers." While prices have recently been much steadier, it seems to the *New York Evening Post* that "no very impressive headway has been made toward correction of the wide disparities between various groups." But *The Wall*

WHOLESALE PRICES AND COST OF LIVING
UNITED STATES

CHANGES RELATIVE TO JULY, 1914 AS BASE 100

COPYRIGHTED BY
NATIONAL INDUSTRIAL CONFERENCE BOARD
NEW YORK CITY

WHAT GOES UP MUST COME DOWN—

Or part way down, for the recent drop in both wholesale and retail prices halts considerably short of the 1914 level. At present, according to the above diagram based on the researches of the Labor Department and the National Industrial Conference Board, the cost of living has come half-way back to its pre-war level, while wholesale prices have come two-thirds of the way.

Street Journal sees prices actually well on the way to equalization. A comparison of wholesale prices in recent months with the peak prices of 1920 will show, it remarks, "not only how far prices are fallen, but that they are coming to a common resting-place, some climbing up, and others slowly moving down to meet them." Here is the comparison in the shape of Labor Department figures, 1913, prices being 100:

	April 1922	March 1922	Feb. 1922	April 1921	May 1920
Farm products.....	127	128	126	115	246
Food.....	137	138	138	194	287
Cloths and clothing..	181	182	183	186	356
Fuel and light.....	187	183	185	199	284
Metals.....	117	114	115	138	195
Building materials...	201	202	202	203	341
Chemicals and drugs..	160	159	159	168	218
House furnishings...	211	213	213	274	371
Miscellaneous.....	152	153	150	154	247
All commodities.....	152	152	151	154	272

At the present moment, notes a Boston bank bulletin, "practically every raw commodity of importance is well above the low point and on the up-grade." And this, we are told, means, first, more profits for the producers, and second, "eventually higher prices for the articles into which those commodities enter." In nearly every direction, asserts Mr. William O. Scroggs in the *New York Evening Post*, "there are signs that producers are seeking to force prices to higher levels":

"In some, as in clothing and dry-goods lines, such efforts are causing no little uneasiness on the part of merchants who know the prevalent attitude of the buying public toward prices. Retail business is still in the midst of a buyers' market. On the other hand, the rise of prices of certain basic commodities like steel appears to have stimulated demand and increased output, so that the effect may be regarded as constructive."

GERMANY IN RECEIVERSHIP

ANDREAS HERMES, the German Finance Minister, named after the Greek god of traders, travelers and thieves, is credited by impartial foreign correspondents with having averted the reparations crisis which was scheduled for May 31. Last year, the Philadelphia *Public Ledger* recalls, the crisis came on the eve of May 1, with French troops moving toward the Rhine bridgeheads, ready to go into the Ruhr valley, and some such move on the part of the French was anticipated this year when Germany indicated that she was unable to meet the demands of the Allied Reparations Commission. The situation, in the words of the Cleveland *Plain Dealer*, was this: France says Germany must pay. Germany says you can not squeeze more than a certain amount of blood from a turnip, and proceeds to show France that the German turnip can not be bled to the extent demanded by France.

It was at this critical juncture that eight international bankers, sitting as a commission in Paris, concentrated their attention on ways and means of settling a problem which apparently Allied politicians had found incapable of solution. In every known manner the Government representatives had tried to persuade Germany to balance her budget through new taxation and internal loans, and to check inflation by stopping the printing of paper money. As far back as March 21 the Reparations Commission issued what at that time was considered an ultimatum, calling upon Germany to consent to the following before May 31:

- "1. Reduce expenditures and balance the budget.
- "2. Take measures to prevent the further flight of capital and to get back \$2,000,000,000 [mainly in securities] spirited out of the country in the last two years.
- "3. Halt the increase of the foreign debt and the growth of paper money circulation.
- "4. Accept Allied supervision of her efforts in that direction.
- "5. Assure the Reichsbank's autonomy from politics.
- "6. Resume publication of Government fiscal statistics."

Germany's reply to this virtual demand for Allied supervision of her finances was slow in coming, due, it is said, to vigorous opposition by Chancellor Wirth and other members of the German Cabinet. Finance Minister Hermes, however, report Berlin correspondents of New York newspapers, held out for acceptance of the Commission's demands, which were finally agreed to "as a basis of further discussion." While the controversy in Berlin was at its height, it should be recorded, the committee of bankers in session at Paris notified the German Government that further consideration of a billion-dollar loan to Germany was out of the question unless Germany should accept the Reparations Commission's ultimatum. Germany's reply, received on the eve of May 31, was that she would do as requested if she could get a foreign loan; that she could not halt the floating debt and stop paper money issue unless she did get such a loan. As for the supervision asked by the Allies, we are told by the Paris correspondent of the New York *Times*:

"Germany accepts it with the understanding that it in no way affects the sovereignty of the German Government nor violates the secrecy of the private affairs of taxpayers. As for the flight of capital, Germany says she has not yet been able to stop

it, but that she attaches great importance to the return of evading capital, and will willingly listen to any suggestion the Allies have to make on the subject.

"Germany agrees to resume publication of Government statistics as before the war, and autonomy of the Reichsbank, the German note says, is guaranteed by a law of May 25, 1922."

The German reply is said to be entirely satisfactory to the Reparations Commission, which has granted Germany a provisional moratorium for the year 1922, or partial postponement of reparations payments.

A big feature of the situation is the fact that the reparations settlement is hailed as the first step in the rehabilitation of all Europe by several New York bankers, for, as the New York *Herald* points out, "Germany, with her feet planted again on solid economic ground, will become an important factor in the rehabilitation of the whole of Europe." And an international loan, which foreign correspondents predict will be forthcoming in a few weeks, "will mean the spinning of economic threads between Germany and her late enemies," agrees the New York *Evening Post*.

But Hugo Stinnes, German industrialist, and the People's Industrial Party are dissatisfied with the reparations settlement. Improvement of the German mark will cause an enormous increase in unemployment, avers Herr Stinnes, who believes that the internal loan which Germany is about to raise as a part of its taxation program will result in the selling of factories and other private possessions in order to escape high taxes and assessments. Besides, declares this capitalist, "the settlement merely gives Germany a respite for a couple of years." In the words

of the Houston *Chronicle*, "the settlement might be compared to licking the devil around a stump." The view of the Washington *Star*, regarding the proposed loan to Germany, as far as the United States is concerned, is that:

"A decision by the bankers to undertake the loan would bring to the United States one of the most serious problems it has had to face since the signing of the Armistice. If so large a sum as a billion dollars is to be loaned to Germany, the bulk of it will have to come from American investors. The United States is the only country in the world which has lendable funds to any such extent. With Europe already owing this country nearly twenty billions of dollars for loans and credits, the proposal that another billion dollars of American money shall be invested there is one that calls for the gravest consideration.

"The understanding is that the proceeds of the proposed loan will be applied largely to the payment of reparations, chiefly to France and Belgium. It would amount, in fact, to a loan to France and Belgium, with their reparations claims against Germany as security. That being the case, American investors will insist upon knowing what security is back of these bad debts.

"The total bill of reparations against Germany, under the terms of the London ultimatum, amounts to thirty-three billion dollars, and constitutes a first lien on all German assets. The total of German wealth upon which this mortgage lies is estimated at twenty billions of dollars, or thirteen billion dollars less than the claim. If the loan it now is proposed to make Germany is to be a thirty-fourth billion-dollar lien on the twenty billions of assets, Americans will not participate in the loan. It is not a gift horse that is being offered American investors, and not only are they going to look the animal in the mouth, but they are going to call in experts to examine all its teeth with painstaking care before any more American dollars are sent to Europe."

NAMED FOR THE GOD OF TRADE.

Herr Andreas Hermes, Germany's Minister of Finance, who is said to have made the German reparations settlement possible.

MR. DAUGHERTY AS AN ISSUE

MCKINLEY HAD HIS ALGER, Taft his Ballinger, and Warren G. Harding, it is now being said here and there, may well profit by their example. Nor is this merely a Democratic cry. Many independent and Republican dailies are convinced by the recent publicity given to Mr. Daugherty's connections with the pardon of C. W. Morse in 1911 that he has become a distinct liability rather than an asset of the Administration. At all events, he has become an issue and a "storm center" at the capital. "Mr. Daugherty's first name should be Eliza," observes the *Minnesota Star*, a labor daily which views Republican and Democratic politicians with equal unfriendliness; "the way our Attorney-General is leaping from one precarious landing-place to another, bearing in his arms the precious bundle Reputation, and with the howling hounds of scandal hot on his heels, reminds one of the hapless heroine of 'Uncle Tom's Cabin.'" That Mr. Daugherty looks upon himself as no jumping Eliza is, however, evident enough from his sage remark to questioning reporters that "faith, hope and charity are excellent virtues, but the greatest of all is patience."

Patience is also an essential for any one who would endeavor to extract the actual facts back of the new "Daugherty issue" from the maze of accusations, denials, explanations, old letters and ancient political history that have been filling *The Congressional Record* and the Washington dispatches for weeks. To understand the attacks on the Attorney-General we must remember that he has been engaged for some time past in organizing his Department to investigate war frauds perpetrated under the last Administration and to prosecute grafters and profiteers. Whereupon comes Senator Caraway (Dem., Ark.), scattering seeds of controversy by asserting in the Senate that Mr. Daugherty was hired back in 1911 to help C. W. Morse get out of the Atlanta Federal Penitentiary. In reply, one of the Administration Senators quotes the Attorney-General as having denied that he ever had anything to do with getting Morse out. Whereat Mr. Caraway shows a photostatic copy of a letter establishing the Daugherty connection with Morse. And then Mr. Daugherty in turn quotes ex-President Taft and former Attorney-General Wickersham as saying that Mr. Daugherty's connection with the case was perfectly proper and aboveboard. Finally, Mr. Daugherty denies that he ever denied having helped Morse. Critics for the most part agree that Mr. Daugherty's worst crimes were poor taste and evasion. In the course of the discussion it was noised about that besides having fooled the examining physicians by "fake" symptoms brought on by imbibing soapsuds, Mr. Morse had also fooled the lawyers—Daugherty and an Atlanta attorney—who helped secure his Presidential pardon, by working off a bundle of worthless stock certificates instead of the bulk of the \$25,000 promised them. It needs only to be noted here that attempts of Representative

Woodruff, of Michigan, and other Republican Congressmen to secure an inquiry into the Department of Justice's fraud prosecution activities was blocked by House leaders.

The orthodox Republican view of the affair, judging from editorials in dailies like the *Albany Knickerbocker Press* (Rep.), *Buffalo Commercial* (Rep.), and *Philadelphia Inquirer* (Rep.), would seem to be that Mr. Daugherty's professional services for Mr. Morse were perfectly proper and legitimate. And anyway, remarks the *Baltimore American* (Rep.), "the whole business about Morse is merely by-play to the affair of the war contracts prosecutions." The Attorney-General has told Congress that more than a hundred million dollars can still be recovered from war contractors, and, observes the *Omaha Bee*, with a sly thrust at the Democratic accusers, "if he can be discredited before he completes his work, and be forced to resign, it will extend the time for the suspected looters to dig in still further and make the process of recovering from them more difficult for the Government."

But from the Democratic press comes a loud demand for the Attorney-General's resignation. In the *New York World's* opinion he "has become the moral test of the Harding Administration." The conclusion seems inevitable to the *Cleveland Plain Dealer* "that he can not in full justice to Government and people remain head of the Department of Justice in the forthcoming war-fraud prosecutions." The *Philadelphia Record* declares emphatically: "Harry M. Daugherty is unfit for the high position he holds, solely on his past record and conduct of his office during fifteen months." The *Houston Chronicle* looks upon the Attorney-General as a liability to the nation, who "is rapidly becoming a liability to the Republican party." In Mr. Daugherty, concludes the *Baltimore*

THE HUNTER HUNTED.

—Sykes in the *Philadelphia Evening Public Ledger*.

Sun, "Mr. Harding has made a blunder that may develop into something worse than the Ballinger scandal."

Independent dailies like the *Springfield Republican*, *Providence News*, and *New York Journal of Commerce* join in this chorus. So do a number of important dailies which lean to the Republican more than to the Democratic side of the fence. For instance, the *New York Globe* says that Mr. Daugherty in the Morse case was simply selling his political influence for money, and if Republican leaders intend to stand by Daugherty, they might just as well go out and parade the streets of Washington with "Votes for Democrats" signs. The *New York Herald*, which is most friendly to the Administration and has a good word for Mr. Daugherty's "warm human instincts and kindly feeling," admits that the Morse case is distressing to the Attorney-General's friends and to his party. A Philadelphia daily, *The North American* (Prog. Rep.), also recalling Ballinger, finds features in the Daugherty episode which make it "the most deadly case brought against a national Administration in many years." Finally, we find the more regular *New York Tribune* insisting that it is time for Mr. Daugherty to resign; and it advises the President "to ask for a speedy resignation if one is not tendered."

WOULD THE DYER BILL HALT LYNCHING?

WHILE THE DYER ANTI-LYNCHING BILL halts in its passage through the Senate—it passed the House last January by a vote of almost two to one—"the American pastime of torturing human beings to death continues to be practised, largely in the Southern States," observes the *New York Globe*; the tenth victim in Texas during a period of three weeks, reports the *New York Tribune*, was shot to death, and his body then dragged through the streets of Waco and later burned in the public square. Moreover, "these instances could be multiplied several-fold by an examination of newspaper files during the past two months," asserts the *Washington Herald*, which notes that "a sinister contagion of lynch law is sweeping

the country." "The passage of the bill by the Senate," declares *The Globe*, "will be a step forward in American civilization."

"The real problem," agrees a Texas paper, the *Dallas News*, "is how to stop lynchings. For they must be stopt, and if the State can not do this the Federal Government will stop them." And it should be said here that several other Southern editors reveal an abhorrence of lynching as sincere as that of *The News*, but nevertheless maintain that the Dyer Bill, if made a law, will result not in less lynchings, but in more. The question of its constitutionality also has been raised by members of the Senate Judiciary Committee, and the charge is made by the St. Louis *Post-Dispatch* that the bill was introduced by a Congressman who has a majority of negro constituents, mainly for the purpose of holding the Republican colored vote in line.

Under the Dyer Bill, the county in which a lynching occurs would be compelled to forfeit \$10,000, which would go to the surviving relatives. This provision, it is declared by no less a person than Senator Caraway, of Arkansas, in a *New York Times* interview, is not unlikely to cause relatives who would benefit by such procedure to organize a lynching party. Nor would it be practicable to collect the fine, points out Mark Sullivan, in a Washington dispatch to the *New York Evening Post*. Moreover, avers the *Memphis Commercial-Appeal*, "a number of those who voted for it in the House did so while believing fully that it

would be declared unconstitutional by the United States Supreme Court." With this statement many Northern editors agree. In the opinion of a Southern paper, the *Asheville (N. C.) Times*:

"The Dyer anti-lynching bill is a political measure designed to propitiate the colored vote in the North and West. This bill is a dangerous invasion of the residuary powers of the States. It clothes the Federal Government with the authority to sit in judgment upon the police administration of the individual States. It places the United States in the position of a super-government that levies penalties upon the counties of the nation.

"But we could overlook these undesirable features if the bill bore promise of stamping out lynching. This is a false hope. The natural effect of this law will be to discourage those in the South who have been fighting organized lawlessness. Once the Federal Government steps in with its penalties and punishments, these foes of lynching will feel that they can withdraw. This measure will aggravate the very question that it attempts to correct, and the evils that will flow from it will more than counterbalance the good."

Another objection to the Dyer measure, as the *New York World* sees it, is that "a jury that would fail to convict [in a lynching case] in a State Court would be no more likely to convict under a Federal judge; the jury would still be local; and it is the jury, and not the judge, that weighs guilt and innocence."

Throughout the South, we are assured by the *New Orleans States* and the *Nashville Tennessean*, "there is not a decent white man or a decent newspaper which is not bending every effort to prevent lynchings."

The *Wichita (Texas) Eagle* is particularly optimistic about the future of Texas. Says this paper, complacently commenting upon recent lynchings:

"Texas has gone amuck, but there is no cause for alarm. The good old Lone Star will come to itself after a few more burnings at the stake, and the customary quietness of midsummer will return. Just at this time of year the fires in the city squares always burn a little brighter in Texas, and the suburban trees with overhanging limbs always have unpleasant duties to perform. Within the next month the number of crimes punishable by burning and hanging will decrease, and Texas will devote itself to business as usual. The present excitement is temporary and seasonal."

"The barbarous and revolting lynching of three negroes at Kirvin, Texas, in May," however, declares the *Boston Post*, "should speed along the Dyer anti-lynching measure." "That Congress has a right to enact such a law is clear," in the opinion of *The Post*, "because lynchings are in direct violation of the Fifth Amendment of the Constitution, which declares that 'no person shall be deprived of life, liberty, or property without due process of law.'" "The lynching curse will never be controlled by the States themselves," we are told by the *Grand Rapids Herald*. Nor is the "practise confined entirely to the Southern States," points out the *Milwaukee Sentinel*. The fact, notes the *New York Globe*, is that—

"The great majority of decent Southerners have spoken against this crime, but their protest has been rendered ineffective by the very fact that they condone the system of oppression of which lynching is the logical expression."

"More law enforcement by the States would make unnecessary the passage of the Dyer Bill," points out the *Providence Journal*, but the *Utica Press*, the *Indianapolis Star*, the *Pittsburgh Gazette-Times* and the *Pittsburgh Chronicle-Telegraph*, among others, have grown tired of waiting for States to punish participants in lynching "parties." As the last-named paper puts it:

"It has been found virtually impossible to secure the conviction of lynchers in a State Court. As for the punishment of local officials for dereliction of duty, that has not been even attempted. Even the most conscientious State officers seem helpless in the face of local public opinion. Evidently the time has come for the Federal Government to step in and restore the reign of law in those regions. It is not a question of partizanship, but of the reputation of our country. No other civilized nation is stained by such a disgrace."

THE KU KLUX IN POLITICS

THE CLOSENESS OF THE OREGON VOTE in the Republican primary contest for the governorship, in which Governor Olcott narrowly won over State Senator Hall, focuses attention for the first time in months on the Ku Klux Klan and its entry into politics. For Senator Hall was openly backed by the hooded organization and a "Federation of Patriotic Societies," we are told by Oregon dispatches. In Texas, too, the Klan is reported to be active in politics. Senator Culberson, one of the veterans of the Senate, who has declared against the "K. K. K." as a menace to civil law and organized society, is opposed by Congressman Henry, who indorses and praises the secret body, while Judge Napier, of Wichita Falls, who promises to drive the Ku Klux Klan from Texas, is out after the governorship.

While no active political campaigns are reported from other States, we learn that a recent search of the office of the Grand Goblin of California, at Los Angeles, after one man had been killed and two shot in frustrating a Ku Klux raid, brought to light two automobile loads of documentary evidence of the Klan's connection with the raid; the home of the Mayor of Columbus, Ga., was bombed and the City Manager assaulted, altho the Klan declares that it is innocent in this instance. Among picturesque bits in the dispatches, we read that in Tulsa, Okla., a band of seven men, who said they were members of the Klan, forced a young man to marry a widow; near Hartford, Conn., there was held a ceremony in which some 1,500 white-robed members are said to have participated, and in New Albany, Ind., masked Klansmen donated \$25 toward a new church. Other recent and diversified activities in different sections of the country are reported from Kansas, where Governor Allen is investigating the charge that members of the National Guard are also members of the Klan; in Kansas City, Kans., where the Klan visited a hospital and left \$402 with the superintendent; in Sacramento, where a secret ceremony was reported in full by the *Sacramento Bee*; and in a New Jersey village, where forty members of the Klan conducted their own services, much to the surprise of the widow, over the grave of a member.

It is only in Texas and Oregon, however, writes Mark Sullivan, political correspondent of the *New York Evening Post*, that the Ku Klux Klan will be "a major political issue" in the State elections. The recent Oregon primary campaign was "the bitterest and closest political campaign in Oregon's history," according to a Portland dispatch to the *New York World*, yet, this paper points out editorially, "Oregon has no negro problem." The anti-alien and religious questions, however, served the Klan's purposes, observes the *Buffalo Express*. In fact, the Portland (Ore.) *Telegram* charges that "a religious dust-storm obscured the real issues." As the *Baltimore American* tells us:

"On the one side was the 'Federation of Patriotic Societies,' under the acknowledged leadership of the Ku Klux Klan, and on the other side were arrayed the alien-born citizens and the negroes. The chief contest was on the gubernatorial nomination. In Multnomah County, which includes the city of Portland, the Federation of Patriotic Societies made a clean sweep in the local offices, including judicial nominations, and gave a plurality of 1,059 for the candidate for Governor. Hall was not nominated, but his vote is large enough to show the Ku Klux strength."

"The closeness of the vote ought to be a warning," agrees the *New York Evening World*. "If the Ku Klux Klan insists on entering politics, good citizens must show it the way out," declares the *Detroit Free Press*, for, as the *Brooklyn Eagle* views it, "if the movement were to become permanent, it would be the greatest sort of peril to the nation." "There is no excuse for the Klan," asserts the *Fresno Republican*, "for our Governmental structure places the responsibility for enforcement of law and the maintenance of order on certain authorized persons." "Good government can not be achieved by privately organized force," agrees the *Mikwaukee Journal*, and the *Los Angeles Times* reminds us that "a mob is a mob; it doesn't matter what secret pins or regalia it wears."

In fact, this is the tenor of all editorials which we have seen regarding the Ku Klux Klan, which the *Sacramento Bee* calls "infamous" and "un-American." "In a vicious and degrading campaign, Oregon has made a lamentable exhibition of itself," thinks the *New York World*. But hope for the future is held out by the *Buffalo Commercial*, which says:

"These so-called patriotic societies arouse public sentiment, and at times appear to sweep all before them. But there is nothing in the movement that is based upon right principles, hence it can not permanently enter the political field."

A POLL OF "BEST MINDS" ON RUM'S RETURN

A BIG ISSUE of the campaign, if the press correspondents are right, will center around the fight to repeal or soften Prohibition. Any light on how the public feel about it, then, is of the greatest interest. The latest poll concentrates on 1500 leaders in various fields of activity and is taken by *The Manufacturers Record*, of Baltimore. Of course, it is pointed out, the list is a selected one; the first thousand names are those of influential men who five years ago signed a petition for Federal Prohibition. It is likely, therefore, contend "wet" adherents, that these would still be in favor of prohibition. Then there are manufacturers, who perhaps naturally wish their workers to come to work sober on Monday morning, alert and efficient. But there are also in the list men who are known to be concerned with the moral, rather than the economic, benefits to be derived from Prohibition—college presidents, physicians, surgeons. And these men vote almost unanimously in favor of Prohibition and its strict enforcement. Says *The Manufacturers Record*, in a booklet setting forth the results of the poll:

"These letters come from men of national standing, men known in every walk of life, in the great business interests and professions. They are in answer to a questionnaire which we recently sent to about 1500 manufacturers, bankers, college presidents and others as to whether, in their opinion, Prohibition had proven a success, and what has been the result in their own experience and among the men in their employ."

A compilation by *The Record* gives the following results in percentage to the total:

	Per Cent.
For Prohibition in Some Form.....	98.50
Against Prohibition.....	1.50
For Strict Prohibition.....	85.50
For Beer and Wine.....	7.00
Against Volstead Law or Present Regulations.....	1.25
In Favor of Modification of Volstead Law.....	.75
In Favor of High License or Government Control.....	1.00
In Favor of Dispensary System.....	.25
Undecided or Noncommittal.....	2.75

Thus we see, in this verdict from a hundred cities, that an overwhelming majority are for Prohibition in some form. For instance, "I am unalterably opposed to a resumption of the liquor traffic, even the reentry of light wine and beer," writes Dr. Harvey W. Wiley, and Warren S. Stone, head of the Brotherhood of Locomotive Engineers, says that the longer he lives and the more he sees of the liquor traffic, the more bitterly he is opposed "to the entire question of the manufacture and sale of liquor." "Best of all," notes the Director of the College of

Commerce, University of Southern California, "under Prohibition a generation of boys and girls are growing up who will soon come to maturity without the taint of alcohol."

In Detroit "the favorable effects of Prohibition are apparent to even a blind man," declares the president of the Leland Motor Co., "despite the fact that we are but across the river from Canada." In Louisville, reports the Mayor, "savings accounts show an increase of 50 per cent. Moreover, 6,172 persons were arrested for drunkenness in 1919, whereas only

1,053 were arrested for that offense in 1920." In the words of the President of the American Rolling Mill Co., of Middletown, Ohio—whose name, by the way, is Verity—

"Some of the results that have been secured are:

"Less lost time, less accidents, less incompetence, less carelessness and inefficiency, better work, better homes, more thrift, happier families, and sober and safer and more efficient men who now are finding out what it means to really live."

We find at least one person in the 1,500, however, who is opposed to Prohibition as a principle. This is Mr. George Blumer, of New Haven, Conn. Here are Mr. Blumer's reasons for opposing Prohibition:

"Many people regarded as representatives of the best citizenship are daily breaking the Prohibition Law. I know of not one but of a great many instances of home-brewing by respectable and heretofore law-abiding citizens. I know a good many people who seldom or never thought of

taking a drink before Prohibition who never refuse one now.

"Another aspect of the situation is bootlegging and its by-products. Furthermore, the rich man can obtain all the alcoholic drinks he desires whereas the poor man is discriminated against."

In the opinion of Raymond M. Hood, who writes a letter to the *New York Tribune*, it would be well to submit to *The Record's* list of influential men a few more questions, such as: "How many of you have stocks of wine and liquor?" "Did you acquire these stocks since Prohibition went into effect?" "Also, how many of you still drink wine and liquor when the opportunity offers itself?" Mr. Hood's idea is that—

"It is probable that you would receive an 85.5 per cent. silence on question No. 1 and a 98.5 per cent. silence on questions Nos. 2 and 3. The answers or lack of answers might indicate whether our benevolent friends prefer prohibition for moral reasons, or because it pays them in their business."

But the *New York Evening Post* sees evidence in this poll that people are changing their minds from hostility to friendliness for Prohibition, the *Chicago Evening Post* foresees a popular uprising for strict enforcement, the *Des Moines Register* believes the poll shows "which way public feeling is running," and the *Pittsburgh Sun* remarks drily that the wets are not likely to find much encouragement here.

THE HAUNTED BASEMENT.

—Brown in the Chicago Daily News.

FOREIGN - COMMENT

THE TEST THAT STRAINS THE ENTENTE

IF THE ENTENTE can stand the strain of the divergence of policy in Europe that separates France and England, it is predicted by some neutral observers that nothing can break Anglo-French friendship. Mr. Lloyd George's objective, they point out, is above all things to get business going as usual in Europe, and toward this end he "would act the life-saver with Soviet-Russia" at the same time showing a sympathy with Germany's objections to the Versailles Treaty that exasperates France. France believes, these neutral editors tell us, that fulfillment of the conditions of the Versailles Treaty is the first principle of European construction. As to Russia, the French cite the alleged Bolshevik canon of international intercourse that "promises need not be kept," and so France will have none of Soviet Russia. In a nutshell, we are told, these are the differences that strain the Entente. Genoa did not bring the two countries on either side of the English Channel any closer together, it is conceded, but the mere suggestion of a rupture that their disagreement about Russia entailed, we are told, roused public opinion both in England and France in support of the Entente. But some English newspapers are very emphatic in noting that the closeness of Anglo-French relations and the attachment solidified during the war "does not imply that France may lead England by the hand across the political Continent of Europe." Meanwhile they praise Lloyd George for his stand at Genoa, altho he there incurred increased dislike on the part of sections of the French press. Returning to London to meet the questioning of his foes in the House of Commons, Lloyd George stated specifically, "I want to work with the goodwill of the democracy of France," and he declared further that England and France "must work together for peace in Europe, and upon that principle we shall work as whole-heartedly as the

democracy of France for that purpose, as we worked in order to defend Europe against the aggression of our common enemy."

Strange words these, observe some cynical writers, when it is recalled that only a few weeks earlier Lloyd George was charged with having said that the differences between France and England at Genoa meant the end of the Entente. The remark was supposed to have been exprest to Mr. Barthou, head of the French delegation at Genoa, but the French representative squelched all explosive rumors by saying that Mr. Lloyd George had "never uttered a word of menace against France," tho he did confess great disappointment that France had preferred to side with Belgium rather than England at the conference. The big fact apparently that emerges from the pother raised by the misreport of the talk between Mr. Lloyd George and Mr. Barthou is that apparently nobody really wishes to see the end of the Entente either in England, France or Germany.

The *Berliner Tageblatt*, for instance, is dismayed at the mere thought that France should become isolated, altho "such isolation would be salutary for her state of mind," but it "would not serve the cause of Germany." Too great a tension between France and England, this daily declares, "might become very mischievous for Germany in view of the fact that our present situation is wholly unguarded." It adds that "for the moment we are sailing solitary on the sea, and storms from every quarter threaten our ship." That the Entente is a factor in the Central Europe situation appears from admission of the Prague *Pravo Lidu* that, if England and France were to split, the Little Entente would be "shifted from solid ground to quicksand," and it continues:

"On this account we must watch Germany's policy with the greatest prudence, for Germany is wheedling Russia along her

ANGLO-FRENCH CARTOON VOLLEYING.

own intent, and we must be on the lookout that between them we do not fall into the lion's den. We are in no immediate danger, for France still dominates the greater number of statesmen in Europe, with the result that England will venture no precipitate measures that might endanger her preponderating power."

In France the Paris *Figaro* asserts that the Anglo-French Entente is the crux of peace, and "around this living center Europe can reconstruct her cell organization, a task it would be hopeless to undertake by attempting to make use of the Russian chaos." In another leading article in this newspaper we read:

"The alliance between Germany and Russia is watched in trepidation by one part of Germany, and by distrust by one part of Russia, for it may mean revolution in the German Reich, or servitude for Russia. It is an agreement between enemies who collaborate and watch each other sharply. Turning on the other hand to the Entente, we notice various divergences of opinion between the two nations, and a disposition to exaggerate them unduly. But despite these differences, all English and French statesmen—as Lord Robert Cecil has recently announced—are convinced of the necessity to maintain the Entente in full vigor. Wranglings occur and threats of separation, but both sides know there will never be a divorce. Even Italy, with whom France is not so very popular . . . realizes that it is to her interest to uphold the Entente. The Italian press admit that if the Entente were broken, France in conjunction with Czecho-Slovakia and Jugo-Slavia might form a barrier that would isolate Italy. The consequence is that the Alliance formed during the war is a vital need of the Roman Government."

According to the Paris *Echo National* the Entente is "a state of mind, under control of the two nations involved, and not of a prime minister," while the Paris *Gaulois* avers "the political atmosphere has been most salubriously cleared by the very sharp reaction produced in England and France at the mere suggestion that the Entente could be broken or even compromised."

In England hearty echoes of this sentiment are heard in various sections of the press, among which the London *Evening Standard* confesses its feeling that "despite all passing differences, reasonable Frenchmen and Englishmen are profoundly convinced that a real disagreement between the two countries could be incurred only at incalculable cost to each." The Entente is "the basis from which all schemes of reconstruction must steadily and surely proceed" according to the London *Times*, but among the British press of Liberal inclination we find the Manchester *Guardian* saying that "the deep division between the European policies of France and Great Britain, which up to the present have produced nothing worse than a stalemate . . . must some day, if we are ever to progress, be either reconciled or admitted as irreconcilable." Similarly the London *Westminster Gazette* contends that as long as this division persists between the two countries, "the Entente, as a diplomatic entity, can have little real vitality." Friendship between the two nations will continue, we are assured, but the Entente "as a diplomatic organism, as a political alliance in all but name, can not survive any clear-cut difference of policy between the two nations on an issue of fundamental importance."

NEW TWIST TO VILNA DISPUTE

THANKS TO GENERAL ZELIGOWSKI'S RAID, and despite of the League of Nations, the Vilna district has been "incorporated in the Polish Republic," and may now be considered "an integral part of Poland," remarks the foreign editor of the London *Contemporary Review* in commenting on a new phase of the bitter dispute between Poland and Lithuania. The Vilna Diet has been dissolved, and twenty members of it have taken their seats in the Warsaw

Diet, but this informant points out that whether Marshal Pilsudski and the "federalists," or the Polish National Democrats and "annexationists" have won, is a question that may be left to constitutional experts. Meanwhile the writer tells us:

"A word may first be said about the curious maneuver . . . by which the Vilna question was made a pawn in Polish party politics, and which led to the resignation and return to power of the Premier, Mr. Ponikowski. The incident arose out of the fact that the Polish Government, in pursuance of President Pilsudski's federal plan, proposed the federation of Vilna with Poland, and not its annexation. It now seems clear that the Right parties in the Warsaw Diet, and in particular the National Democrats, encouraged the Vilna Diet to reject this plan, and to refuse anything less than to be completely annexed. This was a party maneuver, for it was a smack in the face to the President and a blow at the Left party. It was countered by the immediate resignation of Mr. Ponikowski and his cabinet. The suddenness of this move outwitted the Right; they were not able to

form a government themselves, and Mr. Ponikowski, therefore, returned to power rather stronger than when he had left it. The incident also served as a demonstration to the Allied Powers that Poland, after all, was not 'annexing' Vilna."

Thus Lithuania has lost Vilna, this writer goes on to say, and the Lithuanian Government in Kovno has taken the last step possible for a government which is faced by an accomplished fact, and is unable and unwilling to resort to force of arms. It is trying to get Poland to agree to put the dispute before the International Court of Justice under the League Covenant, in order to secure impartial decision, and we are told that the notes which have passed between Poland and Lithuania are interesting "if only for the light which they throw upon the way in which the Covenant is working." We read further:

"The only way in which Lithuania could get the Vilna question before the League's Permanent Court of International Justice was by invoking Article 36 of the Court's Statutes. According to this Article the jurisdiction of the Court comprises such cases as the parties agree to refer to it, but members of the League may declare that they recognize the jurisdiction of the Court as compulsory *ipso facto* and without special agreement, in disputes which *inter alia* concern either (1) the existence of any fact which, if established, would constitute a breach of an international obligation, or (2) the nature or extent of the reparation to be made for the breach of an international obligation.

"Lithuania has made this general declaration, but Poland has not. The Lithuanian Government could not, therefore,

THE CONSTANT GERMAN CRY.

JOHN BULL: "Be reasonable, Madame, and get rid of that treaty thing. Then the Germans will eat out of your hand."

—Wahre Jacob (Stuttgart).

demand as of right that the Polish Government should under this clause submit the dispute to the Court, but it could ask it to agree to do so. The ground taken by the Lithuanian Government in making this request was as follows. On October 7th, 1920, Lithuania had signed what is called the Suwalki agreement. At that time the Russian advance on Warsaw had failed, the Poles were in their turn advancing and were already threatening territory held by the Lithuanian Government and troops. Collisions between the two armies had already taken place, and in order to avoid further conflict negotiations began at the end of September, under the auspices of the League, with a view to an armistice. The Suwalki agreement was the result. It drew a line of demarcation between the Polish and Lithuanian armies, leaving Vilna to Lithuania; the agreement was to 'remain in force until all questions in dispute between the Poles and Lithuanians are definitely settled,' but it was expressly provided that the line of demarcation 'does not predetermine the territorial rights of the two contracting parties.' Two days after the signature of this agreement the Polish General Zeligowski crossed the line of demarcation and seized Vilna."

The Lithuanian Government, we are informed, held that the seizure of Vilna and subsequent events were a breach of the Suwalki agreement, and propose to Poland to submit the question to the International Court of Justice, but: "Poland argues that the Suwalki agreement was merely a provisional military agreement 'which at a particular moment in the middle of a war traced a provisional line of demarcation between two armies.' The Polish Government refuses to return to the position of 1920, and bases its own present position in Vilna on the result of the plebiscite which it held there."

AMERICA'S FARM BLOC AND EUROPE

A STRANGE PORTENT in the political world appears to some European observers in the pressure American farmers are "bringing to bear upon their Government for a closer participation in European affairs." Questions of foreign policy rarely interest the farmer in any country, they say, but the American farmer seemed at the time of Mr. Harding's election to be wholly unconcerned with anything outside of his own States. The best proof of this temperament of isolation is found by the London *Economist* in the attitude of the Middle West during the discussions on the League of Nations. In that section of the country it recalls that "the old objection to any deviation from the traditional policy of American isolation found its strongest support." But it finds that the American farmer has recently undergone "a rapid conversion" and has become "the most powerful of the forces that are moving the country toward a revision of its rejection of the Wilson policy." We read then:

"The significance of the change lies in the fact that the 'farm bloc' is now admittedly the master of Congress. Both the President and the Republican leaders in the Senate and the House have had to temporize and compromise in order to save their own legislative program from being wrecked by the

determined attitude of this revolting section. Again and again the Administration has had to give way to the 'farm bloc.' And to-day Washington is anxiously wondering what will be the effect upon American politics now that the farmers are getting it into their heads that the quickest and surest road out of the agricultural depression is to abandon the policy of isolation which won such a triumph at the 1920 election. This 'change of heart' found expression at the recent National Agricultural Conference at Washington—the largest and most representative gathering of the agricultural interests ever held in the United

States. Its members listened with keen attention to addresses in which distinguished economists traced the connection between the European situation and the deplorable state of American agriculture. They then presented their demands to their own Government in the following terms:—"Whereas, the surplus production of many products of American farms have long found, and now find, their main market in European countries, which are also now large public debtors to the United States; resolved, that this conference therefore urge the Administration to use its good offices and its commanding position as a creditor country to aid in the industrial rehabilitation of Europe."

This resolution marks a great advance upon the program first put forward by the farm bloc, we are reminded, for the proposal then offered—subsequently modified in the substitute measure which the Government offered as a concession—provided that there should be created a government corporation to buy

goods direct from the American farmer and sell them to European consumers. The *Economist* believes that the farmers have since "come to realize that even government assistance can be of little avail in a market that is deserted by prospective customers because they have nothing wherewith to buy." This trade authority believes that the resolution of the Agricultural Conference will be "driven home" by the farm bloc and it cites Washington observers, "whose judgment carries weight," as predicting that before very long the farm bloc "may turn the scale in favor of the representation of the American Government at future European economic conferences." It may even lead to co-operation with the European Powers in greater concerns, according to this weekly, which turns then to the subject of the American tariff, a matter of much interest and perplexity to European observers in general. Briefly, the European idea may be expressed in their contention that America no longer needs a protective tariff, "because there is nothing in European competition that she needs to protect herself against." Says *The Economist*:

"In one respect, however, the process of the education of American farmers in international affairs is as yet far from complete. They are still blind to the absurdity of maintaining a high tariff at a time when the free interchange of goods is more than ever necessary to a trade revival. In fact, they are calling for even higher duties on agricultural products, in order that they may enjoy equal 'protection' with American manufacturers. Disillusion in this matter may come slowly, but the American farmer has recently shown such a surprising willingness to 'scrap' old prejudices that one may look forward with confidence to still more notable changes in outlook when hard experience begins to make his lessons understood."

—Pall Mall Gazette (London).

AUSTRALIAN IRE AT "FAKE RECIPROCITY"

THERE IS MORE FAKE in reciprocity than is dreamt of in the circumscribed philosophy of the average Australian, official or commercial traveler, who visits the United States and Canada and through hospitality and flattery is wheedled into the belief that the two North American countries are willing to give Australia something for nothing. Thus irately exclaims the Sydney (N. S. W.) *Bulletin*, which insinuates that the policy of the North Americans is rather to give nothing for something, and it laments the fact that when the "untutored" Australian visits other lands the foreign folk "hasten to entertain him on the grease and oratory of the land, and try to rush him into a commercial treaty which is greatly to their advantage." No commercial agent has yet returned to Australia with any concession of the least value, it is asserted, but some have returned "possessed by a bemused idea that it would be very nice if we arranged to reciprocate with some country with which we do a consistently losing trade, and which never reciprocates worth a copper." For instance, *The Bulletin* cites a statement of the Australian Senator Pearce, lately returned from Canada, who is reported as saying:

"I had the opportunity of discussing the question of reciprocal trade arrangements with the Canadian Government as well as with Chambers of Commerce and business men at Ottawa, Toronto and Montreal. I am convinced that not only is there a genuine desire on the part of Canada for reciprocal trade with Australia, but that there are many things in which a mutual trade could be established without detriment to the industries of either country, particularly in those products that are seasonal in their character."

Canada learned its trade habits from "the dollar-bitten United States," this Australian weekly goes on to say, and the policy of each country is to be self-supporting or as nearly so as circumstances will permit, and to aim at preeminence in agriculture and manufactures, even if it works long hours in the effort. The two, who are one flesh, are said to believe in selling everything, to boom their own industry and in buying nearly as possible nothing, so as not to boom the other fellow's industry, and in taking the balance in gold, or in government securities, if there isn't enough gold to pay with. This kind of reciprocity doesn't work in all countries, but impresses the "unsophisticated representatives that easy-going, easy-borrowing Australia sends abroad," and *The Bulletin*, which has bitterly opposed the placing of Australian loans with Uncle Sam, proceeds to show what "slick traders" he and Canada are:

"Both from the United States and from Canada the itinerant public bagman comes back with no gains, but with a tale of how he was made much of, and dined, and wine, and cigar, and carest, and persuaded that we should give the plausible host a larger opening here for his manufactured goods, to the detriment of our own struggling factories—this in return for some vague encouragement for our 'seasonal' products: a few bananas

and a passion-fruit or two. The United States and Canada don't want our wheat or meat or butter, for they are sellers of these things themselves. They don't want our manufactures either, if we had any to sell, for they are in the rare position of being exporters of them also. Canada sends abroad cheese, eggs, butter, sheep and cattle (alive and dead), wheat, flour, oats, hay and fish. Also it exports coal, copper, silver, agricultural machinery, manufactures of leather, iron and steel, wood and paper. It exported ships and munitions during the war. The United States does the same thing on a vastly larger scale."

AN AUSTRALIAN SLAM AT SAM.

THE NEW MEPHISTOPHELES: "I have all the money in the world—and any time Australia needs it she can have it—nearly all of it—on my terms."

—The Bulletin (Sydney, N. S. W.).

It is further pointed out that as Australia has "an appalling foreign interest bill" to meet every year, it should sell much more abroad than it buys, in order to have money to meet this liability. But it buys far more from the United States and Canada than it sells to them, and we read:

"From the Australian point of view our business relations with them are worse than our relations with any other countries on our trading list. With increasing energy—an energy which is wholly to their credit—they push their wares on our market. But they do hardly any counterbalancing benefit to our agriculture by taking raw materials in return. Rather—and this is to their credit too—they want to sell us raw materials as well. Their apparent ambition is to take Britain's place in supplying us with finished articles, and if they succeed Britain will find it difficult to pay for our raw stuffs, which will be left on our hands. At the same time, Canada and the United States are the only ones which persistently

bamboozle our unfledged ambassadors of commerce with proposals for more business of the one-sided variety. There is one kind of reciprocity that would meet all cases, and especially the case of Australia, which must sell or burst. It would consist in enacting that when our purchases from any outside State in (say) 1923 got beyond the amount which that State bought from us in 1922, the receipt of goods from that State should cease for the rest of the year. That would save us a lot of money and would seriously affect only two countries. They talk reciprocity more than all others put together, and surely there could be nothing more reciprocal than this idea—nothing under the sun.

"And the results, even with the reciprocity we have, which seems a great deal more than we can afford, have been as follows so late as figures are available:

	Australia's Average Annual Imports for 20 years (1899-1919)	Australia's Average Annual Exports for 20 years (1899-1919)	Average Annual Balance Against Australia
United States . . .	£8,707,543	£4,407,314	£4,300,229
Canada	799,112	557,850	241,262

"The results were worse than they looked, for the sales weren't all goods of the kind we want to dispose of. Some coin and bullion were included. The average grew steadily worse as time went on. For the isolated year to June, 1920, where the record stops, this was the position:—

	Year's Imports	Year's Exports	Balance Against U.S.
United States . . .	£23,768,030	£11,129,937	£12,638,093
Canada	2,640,383	312,452	2,327,931

"So it becomes an urgent question whether this country can afford to reciprocate any more."

SCIENCE - AND - INVENTION

HOW FIRES START THEMSELVES

SPONTANEOUS COMBUSTION—the origin of a fire in combustible material, without the action of any outside agency—is the cause of countless disasters. According to Walter L. Wedger, chemist of the Massachusetts Department of Public Safety, who writes in *The National Safety News* (Chicago), it is the result of oxidation, the union of oxygen with any part of the substance in question. Spontaneous combustion in substances susceptible to oxidation occurs when the air supply is sufficient to support such oxidation. If that air supply is sufficient in volume not only to support oxidation in the substance, but to carry away all the heat generated, then fire does not occur. He continues:

“Spontaneous combustion caused by the atmosphere may be made to take place in fifty minutes or it may take years. One example is cotton-wool impregnated with linseed oil and exposed to a slow stream of air, all maintained at the temperature of boiling water. Another is the oxidation, or rusting of a piece of iron. One takes fifty minutes and the other years. Spontaneous combustion caused by chemicals is in many cases almost instantaneous. For example, a drop of sulfuric acid dropt upon a mixture of potassium chlorate and sugar instantly sets fire to the mixture, owing to the rapid generation of heat. Another prolific cause of spontaneous combustion fires is the dangerous practise of throwing oil-soaked rags or cotton waste into obscure corners.

“Wiping-rags from a freshly painted floor, left in the basement of the Hotel Melvin at Allston, Mass., in 1914, caused the destruction of the entire hotel and the death of eight persons.

“In the early part of the same year, at the Hotel Arcadia, Boston, where twenty-eight persons were burned to death, we found cotton waste saturated with oil in closets on the first floor just above the collar heating apparatus.

“The best way to prevent such fires is to burn up immediately all rags or waste saturated with oil. If this is not possible, spread them out over the back of a chair in a cool place where the air can quickly take away all heat generated by the oxidation of the oil.

“Mineral oils do not cause spontaneous combustion, as they have been completely oxidized in the earth, and are therefore incapable of combining with any more oxygen.

“Oxidation by the atmosphere is the primary cause of spontaneous combustion in soft coal, probably aided by the presence of excessive sulfur and other impurities; the finer the coal the more rapid is the oxidation process, until it breaks out in flame.

Coal piled against wooden beams appears to be more susceptible to oxidation than elsewhere in the pile.

“Several devices are in use to extinguish fires at the bottom of huge piles of coal. Professor Lewis describes the following ingenious method: ‘Steel bombs filled with liquid carbon dioxide are placed in various parts of the pile. They are provided with a fusible plug which melts at 93 deg. Centigrade. If the temperature of the coal-pile rises to the degree at which ignition would probably take place, the plug melts and the carbonic acid escapes, exercising a cooling and fire-extinguishing effect on the coal.’

“Long pipes are often driven down in the coal where the smoke appears the thickest and through them carbon tetrachloride is poured. This liquid on striking the fire forms a vapor five times heavier than air, which sinks downward, extinguishing the fire by depriving it of oxygen.

“Thermostats are frequently placed in coal-piles and when a rise of temperature is noted, crews of men are put at work shoveling over the coal.

“Freshly ground wood charcoal, sometimes called pyrophoric carbon, is very susceptible to spontaneous combustion. It exhibits a remarkable affinity for the oxygen of the air, and as it is very porous, presents a large surface for the action of that gas.

“Recently the Brockton fire department was called to extinguish a fire which originated in a building at a point in a partition where a hot steam-pipe was in contact with a piece of wood. The firemen made

short work of the fire and chopped away to find the cause. The wood at the point of contact with the hot pipe was deeply charred. Fire had started in this charring and spread upward. The ignition temperature of a piece of soft wood ranges around 450 degrees Fahrenheit. The question then arose: ‘How could steam at the temperature of boiling water, 212 degrees Fahrenheit or higher, if under pressure, ignite wood which would not take fire until 450 degrees had been reached?’

“The gradual charring of wood in the interior of dry rooms heated by steam is very noticeable. This thin layer of carbon becomes oxidized from exposure to the air, but if the steam-pipe is under higher pressure and is in contact with wood inside of a partition where there is no circulation of air, pyrophoric carbon may be formed which is claimed to ignite spontaneously at about 300 degrees Fahrenheit—the temperature of steam under a pressure of seventy pounds. This may account for the Brockton fire.

“Much has been written regarding spontaneous combustion in fibrous material, such as wool, silk, cotton, hemp, jute, flax, tow and shoddy. Vegetable fibers are more susceptible to spon-

Illustrations by courtesy of the Chase Metal Works.

HOW THIS 7,000-TON COAL-PILE IS KEPT FROM FIRING

Is told in the accompanying article.

taneous heating than animal fibers. When such fires are impregnated with vegetable oil, fire is almost sure to occur within a few hours under normal conditions and, if exposed in the Mackey spontaneous combustion tester, it is only a matter of minutes. Several interesting spontaneous combustion fires have occurred in the hemp storage at the Charlestown Navy Yard. Microscopical examination of these fibers show them to be in the form of a tube which is more or less filled with a sort of vegetable wax.

"About ten years ago a large iron steamship crept into Boston Harbor, dropt anchor and signaled for the fire-boats. She was loaded with jute, and while at sea fire originated from spontaneous combustion in her middle hold. I recommended carbon tetrachlorid. About two hundred gallons of this liquid were taken aboard the vessel together with some sheet-iron tunnels and gasoline blow-torches.

"Rivets were knocked out in the deck above the middle hold and the tunnels were placed in the rivet holes. Gasoline torches were lighted and allowed to play against the spout of the tunnels, keeping them hot, to effect instantaneous vaporization of the carbon tetrachlorid which was poured in a constant stream into the tunnels. The vapor being five times heavier than air was expected to sink down slowly through the jute and extinguish the fire by depriving it of oxygen.

"At the expiration of forty-eight hours, it was decided to remove the hatches for examination. As a precautionary measure the fire-boats were again summoned, but on taking off the hatches, only a slight haze of smoke remained, every vestige of fire having been extinguished. The fire-boats played water on the top bales for a short time to guard against a rekindle, which might be made possible by the air vent furnished by the open hatches, after which the vessel proceeded to her dock where she was unloaded. The bales of jute, especially on the bottom, were badly burned."

The secret of avoiding spontaneous combustion in piled coal lies in the construction of the pile, according to John E. Williams, Chief engineer of the Chase Companies of Connecticut. Says Mr. Williams in *The Chase Diamond* (Waterbury, Conn.):

"There are three rules that should be followed:

"1. Drop your loads in a bulk. Don't let them trickle out into cone form.

"2. Build your pile in flat layers.

"3. Don't rehandle the coal.

"Build your coal in layers as if you were building a brick wall. Drop your first load flat in a bulk, lay the next load close to the side of it, the next to the side of that, and so on until you have laid a whole layer with a flat top. This keeps the mixture of fine and coarse coal together.

"If you drop the coal from the bucket in a cone shape, the heavier bigger coal will roll down the sides of your pile leaving the fine coal in the peak of the cone. The next cone that is placed onto this peak of fine coal will be with the heavy coal at the bottom and sides through which air will come and set the whole pile on fire.

"Build your coal as you would a haystack, in layers. Keep the surface flat and lay each load side by side. Don't let your coal roll and dribble down the sides. This separates the fine coal dust and the large pieces of coal and leaves at the bottom of the pile strata of coarse coal through which air is fed to the compressed fine coal.

"Some coal will catch fire anyway. Coal with excess sulfur and iron in it will ignite by itself. I have seen coal lying in the sunlight take fire from the heat of the sun. But there is very little of this coal; perhaps only five per cent. of all the coal contains as much sulfur and iron as that. Once you have built your coal-pile, don't touch it. Let it get settled and get its first 'heat' and cool down.

"I am speaking, of course, of big coal-piles. In the picture there are some 7,000 tons of coal. The pile is 500 feet long by 60 feet wide and is piled about 30 feet high. In the west storage bin we have about 10,000 tons more.

"With so much coal on hand it is an important thing to us to know how to prevent it from catching on fire. The secret is in building the coal-pile in layers."

EFFECT OF THE NAVAL HALT ON INDUSTRY

PESSIMISTS HAVE SHAKEN THEIR HEADS as they thought what the sudden cessation of naval construction might mean to a population already burdened with unemployment. But it is sanely pointed out by an editorial writer in *Chemical and Metallurgical Engineering* (New York) that our metallurgical industries are so huge that the withdrawal of a few warships can affect them little, and that the moral influ-

ence of a general feeling that something has been done to lessen the possibility of future war is a very great factor on the other side. On the whole, the writer believes that the net effect of the Washington Conference has been actually to benefit industry. He writes:

"Coming when naval disarmament did, many fears were expressed that the abandonment of warship construction would prove the last straw to break the back of the deeply depressed metallurgical industry. With steel mills operating at one-quarter

capacity or less and important brass works running but one or two shifts a week, to some pessimists it seemed particularly inopportune to shut off one substantial outlet for highly wrought metal and add to the millions of men facing a jobless winter.

"However, a little calculation indicated that our warship program consumed an extremely small percentage of the total output of steel and alloys. With the exception of four or five sizable plants engaged in making armor and guns, it makes comparatively little difference to the industry by and large whether we are building warships or not. The proportion of their product going directly to the Navy is small indeed—even armor plants are usually single departments of highly integrated steel companies, making almost everything from huge forgings to railroad spikes.

"Sober second thought and a wide vision indicated immediately (and events have proved) that the indirect effects of naval disarmament were to be far greater than the direct effects. It is a truism that business is based on credit—that is to say trust—and nothing cuts deeper into the volume of sound trading than suspicion, wars and rumors of war. If naval disarmament increased the sum total of peace on earth by 1 per cent., the direct loss to those industries most vitally concerned has been repaid to them indirectly through their other departments. Other lines of activity have multiplied their profit enormously."

Being of an optimistic turn of mind, the editor goes on to say, he is sure that even the dislocation and scattering of the person-

nel from the armor and gun plants will redound to the benefit of sound metallurgy. Perhaps this is small comfort to the worker who must hunt a new job. But there are few metallurgical plants whose operations would not eventually profit by adding to their staff even one man who has been exercising for years that care necessary in the making of fine steels. He continues:

"Granted that the most of the laborers from gun plants are men who merely do as they are told without knowing why they

do it, and therefore are not capable of applying their experience to other kinds of product, there are many other men, some with the advantage of college education and some who have acquired their knowledge in the works, men who have studied steel closely for years and have always made a sincere effort to find the cause of failures in whatever stage of manufacture they occur, so as to avoid them in the future rather than to establish an alibi.

"A wise manager does not let such men get away if he can possibly take care of them in any other department. But some managers are not particularly astute, and others may be chained by circumstances. So if one of these technologists of parts, metallurgist, heat-treater, melter, smith, whatever he may call himself, is available, and you can obtain his services, do not hesitate to give him a job, for he will prove to be a jewel of great price."

TO LINK TWO OLD-WORLD SEAS

A SCHEME TO ESTABLISH a route for ships through the heart of Europe between the North Sea and the Black Sea is reported in *Ship News* (New York). The route, which will consist partly of new canal and partly of improved rivers, will be at least 1,600 miles long, beginning at Rotterdam, Holland, and ending at Galatz, Roumania. This scheme for a transeontinental waterway for ships up to 1,200 tons is the latest plan for opening Europe to international trade. With the formation in Munich of the Rhine-Main-Danube Company, Limited, it comes nearer realization. The plan, we are told, is intended to link the two great rivers of Central Europe, providing

various trades and the banks, four shipping and two agriculture and labor."

The main financial basis of this vast concern, the writer goes on to say, is a great scheme within the larger scheme. At the locks all along the German part of the waterway forty large electric power stations will be erected, with a total capacity of 400,000 horse-power. The aim is eventually to electrify the whole industry of Bavaria. This will not only provide the company with its most important source of income, but will save about 3,000,000 tons of coal yearly—a very important national consideration. He continues:

"The first of these power stations to be built will be four on the Main and one on the Danube. They will be completed at a very early date so as to provide for an immediate source of income. The scheme will not be absolutely complete for about twenty years, but it will be so carried out that the waterway will be opened within two years.

"It is estimated that the company will spend more than 1,000,000,000 marks on construction during the next five years, when the bulk of the work, in which all the most important firms in the country will participate, will be accomplished.

"Such electrical firms as the General Electricity Company, Messrs. Siemens, Schuckert & Co., the Bergman Electricity Works, Ltd., and Messrs. Brown, Boveri & Co., have examined the plans, gone into the whole project technically and financially, and have expressed themselves strongly in favor of it.

"The scheme has a certain foreign political importance. English capital has been put into the Danube shipping. France has an interest in the Hungarian State Railways and in the river port of Budapest, which is to be made an important central point for mid-European trade.

"France, too, is endeavoring to get a trade hold on the Rhine."

a connecting unit between the industrial west and the Danube regions which, rich in timber and the fruits of the soil, call for the products of the Rhineland "Black Country" and the great world beyond. Says the paper named above:

"From Aschaffenburg, on the Main above Frankfort the waterway, Rhine and Main, is perfectly suitable for the project. From Aschaffenburg to Wuerzburg the Main will have to be canalized. Between Bamberg and Kelheim is the Ludwig Canal, completed in 1846, and about 100 miles long. It must be widened and deepened. From Kelheim, where the Ludwig Canal joins the Danube, to the Austro-German frontier at Passau the Danube will have to be made suitable for the ships it is intended to pass. After that all is comparatively plain sailing—a romantic voyage down the 'Blue Danube,' past Vienna, Budapest and Belgrade and on between Roumania and Bulgaria to the Black Sea.

"It is part of the scheme to canalize the Upper Danube from Kelheim to Ulm and to link Munich and Augsburg with the great waterway.

"The Rhine-Main-Danube Company, Limited, will have a total capital of 1,200,000,000 marks, which will make the company the heaviest capitalized concern in Germany. Of that amount 600,000,000 marks, in 1,000 mark ordinary shares, will be taken up by the German Government, the Bavarian Government, other states of Germany and various public bodies. There will be, too, 300,000,000 marks in 1,000 mark preference shares, of which 42,000,000 marks will be subscribed for by various south and west German municipalities, and the rest, 258,000,000 marks, by the Deutsche Bank, three large Bavarian banking houses and an important Rhineland bank.

"The preference shares will carry a dividend of 7 per cent., and the German and Bavarian Governments, which guarantee the capital, will also guarantee 5 per cent. of that dividend. The board of directors will number fifty-nine persons, all of them experts in their way; eleven representatives of the German Government, eight of the Bavarian Government, one each of the Baden, Thuringian and Hessian Governments, nine of various public bodies, twenty-two of the electrical industry,

NEGRO DEATH-RATE FALLING

A REMARKABLE DECLINE in the mortality of negroes has taken place in the last decade, according to the records of the Metropolitan Life Insurance Company. This company, according to its *Statistical Bulletin* (New York), has more than 1,600,000 colored policy-holders in its Industrial Department, located in virtually every State of the Union. In 1911, the mortality was 17.5 per 1,000. In 1921, it had declined to 13.2 per 1,000—a drop of 25 per cent. There would have been 7,000 more deaths of colored policy-holders than actually occurred in 1921, if the 1911 death-rate had prevailed in that year. The writer goes on:

"This marked decline, on analysis, can be traced to improvements in the death-rates from tuberculosis, pneumonia, heart disease, Bright's disease, malaria, typhoid fever, and pellagra.

"The improvement in the mortality of negroes is not localized. So far as the experience of the Metropolitan indicates, it represents a very broad movement affecting virtually all areas. Scarcely a state but shows a decided decline.

"As late as 1916 there were 56 local areas where the Company's colored business showed mortality rates above 17.5 per 1,000. The record for 1921 shows only 15 such localities. In 1916 there were 30 centers with rates in excess of 19.0 per 1,000. In 1921 no such rate was experienced anywhere. It is noteworthy that the public-health movement which has been so successful with reference to the white population is also making its impress upon the colored. The negro death-rate, however, is still so high as to show glaring deficiencies in the health pro-

ADMIRAL FISKE USING HIS INVENTION.

visions for these people. The facts for the last ten years show clearly that the death-rates of this race can readily be improved. There is all the more necessity for intensification of the services specially applicable to these people. In this connection, much is promised by the apparent desire of the insurance companies administered by negroes themselves to lead in the development of public-health work and welfare services among their own people."

A DICTIONARY IN YOUR VEST POCKET

ENORMOUS CONDENSATION in the bulk of reading matter is promised by Rear-Admiral Bradley A. Fiske from the use of a plan he has invented for producing books or magazines photographically with microscopic letters, to be read through a lens. A device for holding the lens and manipulating the reading matter is called by him the "Fiske Reading Machine." This arrangement and its possibilities are described and discussed in *The Scientific American* (New York, June) by S. R. Winters, who assures us that the device is simplicity and compactness personified, lending itself to easy carriage in one's coat pocket. He goes on:

"The instrument, consisting of a tiny lens and a small roller for operating this eyepiece up and down a vertical column of reading-matter, is a means by which ordinary typewritten copy, when photographically reduced to one-hundredth of the space originally occupied, can be read with quite the facility of conventional printing type.

"There is an extremely light frame, composed of aluminum. A strip of paper is a carriage for the photographed lettering, which lies in a longitudinal groove in the frame. A tiny lens, capable of magnifying the characters ten times, brings the lettering into prominent review. A roller, really the only mechanical part of the contrivance, serves the purpose of moving the strip of paper along a groove in front of the lens. The forefinger of the hand holding the frame acts in this capacity.

"The lettering is imprinted on a narrow strip of paper which

may be moved at will in front of the lens at a fixed distance therefrom. These tiny representations or characters are printed from a copper block on which has been photo-engraved, on a reduced scale, common typewritten matter.

"The process operates in the absence of type and involves no typesetting. However, this novel system renders it possible to photo-engrave books already printed and likewise publish reduced copies at a nominal expense for use in the 'Fiske Reading Machine.'

"Answering frequent inquiries to the effect, 'Does the use of this machine tire your eyes,' Admiral Fiske likens the effect thus expended to that of reading ordinary lettering with the unaided eye. Engravers toil incessantly at their occupation which is of striking similarity to reading by this machine.

"The dispatch with which one can read when using the 'Fiske Reading Machine' is remarkable. At a single glance through the lens one hundred and twenty words are revealed to view.

"Admiral Fiske, in demonstrating his invention to the writer, read aloud at a rate of 239 words a minute. The strip of paper containing the lettering is chockful of words - 10,000 on each side, to be exact; 475 strips, two inches wide and nine inches long, could incorporate the contents of a bulky dictionary.

"The weight of these strips of paper would be only two and a half pounds or about one-eighth of that of a standard dictionary.

"Literally, tons of books are annually published in the United States as reference guides with no object of being read. The 'Fiske Reading Machine' would cut the mounting costs of paper and printing involved in this task of magnitude. Similarly, millions of dollars are spent by the Federal Government in the publication of bulletins that are never read, and their storage exacts a further toll in the form of valuable space. The invention being described would authorize drastic economies in these instances."

Other possibilities were outlined for Mr. Winters by Admiral Fiske as follows:

"1. The cost of manufacturing books, magazines, weeklies and perhaps newspapers will be so reduced that 10,000 copies

of one of average size, containing about 100,000 words, can be manufactured and sold to a publisher for four cents each.

"2. Since the best quality of paper must be used, books, magazines and newspapers used in reading machines will last indefinitely. At present, they begin to get discolored and to crumble in a few years.

"3. The amount of paper needed for printing any number of words will be diminished to about one-sixtieth of what is needed now.

"4. An ordinary book, magazine or weekly as reduced can be sent by mail for one cent, singly.

"5. The work of mailing books, magazines and weeklies will be enormously reduced, and the transmission of mail by airplane much facilitated.

"6. The space needed for keeping books, magazines and documents will be enormously diminished.

THE BRIDGE DURING CONSTRUCTION.

Showing floor beams being suspended from the two main cables by hangers of carefully calculated length.

"7. The cost of manufacturing magazines, weeklies and newspapers will be so greatly reduced that in all probability they can be given away; assuming that advertisers will continue to pay as at present.

"8. Smaller presses will suffice, and therefore less capital will be required.

"9. Books of reference, such as encyclopedias and dictionaries; standard books like the Bible and the works of Shakespeare and other preeminent authors, can be sold for prices much less than their present prices.

"10. Eyeglasses and spectacles will not be required for reading.

"11. The diffusion of knowledge will be greatly facilitated; because even the poorest people will be able to buy the most instructive and entertaining works.

"The 'Fiske Reading Machine' is the product of two years of creative effort of the inventor. His original attempt to devise a machine for easy reading is apparently fruitful of achievement. His creative genius, so wonderfully productive while in the service of the Navy, is not inactive, now that his retirement is a fact."

A 500-FOOT BRIDGE BUILT IN 13 HOURS

"BUILT," IN THE ABOVE TITLE, means "assembled," the parts of the bridge having been made elsewhere and all ready to be put together in place. The Willamette River at Oregon City, Ore., was the scene of this feat, which is described in *The Popular Science Monthly* (New York, June). The builders were engineers of the Oregon State Highway Bridge Service, and what they did is termed "an amazing demonstration of the construction speeds now obtainable as a result of modern methods of preliminary mathematical calculation." Every beam, cable, hanger, and plank in the entire structure was cut to the exact size and laid out on the river bank before any actual building was attempted. Because every element in the complicated structure fitted to the fraction of an inch, the building was accomplished almost as quickly as an automobile can be assembled. Says the magazine named above:

"Speed in the work was necessary because an old suspension bridge, built across the Willamette in 1888, was to be taken down and replaced by a new arch viaduct, and it was necessary to build a temporary footbridge to allow hundreds of people to cross the river to their work. Traffic could not be suspended, even for a day, and it was also necessary to avoid interference with navigation on the river.

"The first step in building the temporary bridge was to frame the towers. On each bank of the river six piles, each 90 feet long, were laid horizontally and bolted together. Emplacements—consisting of substantial timber footings embedded on solid rock—were prepared, and the towers, hoisted in place by a floating derrick, were braced and guyed. The instant this was accomplished, two gangs of men set to work, one gang erecting the approaches while the second swung the suspension span.

"Two parallel wire cables, each composed of four one-inch ropes, were passed across the river and over the towers, then fastened to anchorages.

"Two men then climbed to the top of each tower, placed a plank across the cables, and took their positions at the ends of the plank, each man straddling one of the cables. To these men were handed the hangers, or vertical ropes with which the roadway was to be hung to the cables. The hangers had already been cut to the correct length and fitted with clamps ready to attach to the cables.

"The workmen moved out along the bridge, fastening the hangers as they went, while a second crew of two men following laid the framework and spiked down a temporary roadway as fast as the hangers were fixed.

"In constructing the roadway, each floor beam was suspended from two opposite hangers by slipping each end into a U-bolt already clamped to the lower end of each hanger. To the beams, spaced at equal distances by a space gage, four 2 by 12 inch planks were spiked lightly.

"This process was repeated in suspending and planking each of the 48 floor beams, providing a temporary footway across the bridge by which material could be carried out as the construction proceeded. In the meantime the framed approaches to the bridge were being bolted into place, all the wooden truss members having been shaped previously. The crew that followed the men laying the floor beams put down the permanent deck. As a result of this concerted effort, the bridge was opened to the public without any interruption of traffic.

"The details of the construction offer an interesting example of the engineering design of a temporary structure. This bridge is not intended to remain in service more than a year—hence the extensive use of wood, especially in the towers.

"The span is for pedestrian traffic only, and is planned to carry a maximum live load of 500 persons at 160 pounds each—that is, about as many people as could crowd upon the bridge. It is built with a factor of safety enabling it to support three times the maximum load. For example, each of the eight strands in the main cables will withstand a tension of 58 tons. The combined weight of the bridge and its maximum live load will produce a total tension of 160 tons in the cables. Dividing by eight, each strand need carry only 20 tons—about a third of its safe working load.

"The main span is 496 feet between towers, with a navigational clearance of 75 feet at low water. Each of the 48 hangers is of six-strand flow steel cable with hemp centers. Since these must often bear heavy loads for a few seconds at a time, the factor of safety is raised to five."

RADIO • DEPARTMENT

RADIO ENTERING THE SCHOOLS

FROM THE VERY OUTSET the pioneers of radio broadcasting have insisted that the new art is destined to take its place among the great educational influences. Prominent educators, notably those associated with colleges in various parts of the country, have proved receptive to the idea. Mr. Henry F. Pringle, in the *Radio Globe* (New York), tells of various educational fields that radio seems destined to enter in the immediate future. He states that Superintendent William L. Ettinger, of the New York school system, is optimistic about the future of the radiotelephone as a means of furthering education. The experts of the Board of Education, he says, are closely watching the development of the new movement, and are ready to bring about wide use of radio in the schools, as soon as the best method is clear. It is noted that a number of schools have already installed receiving sets; and Superintendent Ettinger is quoted as saying that, whereas these have hitherto been used merely to pick up music and messages sent out by the various stations, it is expected that they will ultimately be put to more practical use. An intimation of what this implies is given in Mr. Pringle's discussion. He writes:

"One of the most difficult problems facing the educators of the present day is that of developing children who, for one reason or another, are classed as 'subnormal.' It is a new problem, comparatively, because of the fact that until a few years ago most of the individuals who could not stand the pace set them by their fellows were set aside as 'not adapted to school work,' and quietly shelved for work in the factory or to become charges upon the public.

"Here the radiotelephone is to prove of the greatest benefit, according to indications at the present time.

"The problem of the mental defective, of course, is the problem of stimulating interest through the proper channel. The boys and girls whose minds may seem a little cloudy are often

Courtesy of the "Radio Globe," New York.

STUDENTS IN A NEW YORK PUBLIC SCHOOL AT WORK IN A RADIO SHOP.

found to be surprisingly intelligent, after all, provided that the correct approach has been discovered. It is the belief of many educators that the radiotelephone will furnish this for countless thousands of young unfortunates.

"It is expected that the broadcasting station soon to be erected by the city will be made one of the means of bringing instruction to the mental defectives. During the evening hours there are to be the usual band concerts, of course. But in the morning hours ample time will be available when trained experts may broadcast messages to the youngsters groping in the shadow of life with a clouded mind.

"Another field of education which is certain to be greatly increased by the radiotelephone is that of instruction for the blind.

"It is the hope of those who have given their lives to the blind that the radiotelephone will give to each blind man and woman, boy or girl, the touch of companionship which their more wealthy fellow-sufferers enjoy. It is hoped that at some hour each night several chapters of the best books of the day may be broadcasted, that leading articles from the daily press may be read, and other instructive matter furnished through the air to those who have not the use of their eyes.

"We have said that the educational uses of the radio are virtually without limit. This is almost literally true. Consider the comparative handful of people attending the public lectures supplied by the city as contrasted with those who may 'listen in' in the event that these same lectures are broadcasted to the people of New York. They will not even have to leave the house to journey to the corner school. A turn of the knob will suffice.

"It is easy to imagine that patriotic exercises of the future will be arranged in many of the schools by radio. Amplifiers will be erected in the assembly rooms of the various institutions and the message of the day broadcasted to 300,000 or 400,000 children at one time. The day will shortly come when the President of the United States, sitting in the White House, may address a message of inspiration to the boys and girls of America on the anniversary of the birth of one of the great men of history."

THE RADIOPHONE SERMON—20 MILES AWAY.

—Brown in the Chicago Daily News.

HOW TO MAKE A LOOSE COUPLER

A CORRESPONDENT WRITES to ask how to make a loose coupler. Doubtless there are thousands of novices who have constructed simple receiving outfits with a tapped tuning coil who would like to give their outfits greater selectivity, and who have learned that this can most readily be

accomplished by the use of loose coupling. Fortunately it is not very difficult to make a loose coupler, and to substitute it for a tuning coil. The latter need not be thrown away, but may be retained and used on occasion as a choke-coil by hooking it into the aerial circuit, to increase the wave

length. In *Radio News* (New York) Arthur H. Lynch gives specific instructions for the construction of a loose coupler, the use of which is highly recommended.

"First procure two pieces of wood, 12" x 1½" x ½", which are, with two other pieces, 5" x ½" x ½", used for the base, and three other pieces, 5" x 5" x ½", to form the ends of the primary and secondary, the base for the secondary being made with a piece, 5" x 2½" x ½". Two cardboard cylinders, 4" and 3" in diameter, must then be procured. The dimensions given in the accompanying illustration need not be strictly followed, and a certain amount of leeway is left to the experimenter permitting him to take advantage of whatever material it is easiest for him to secure.

"In making the loose coupler two round pieces of wood must be procured to fit the inside of the two cardboard tubes tightly. The larger one mounted inside of the primary coil may be screwed by means of four small wood screws so that the surface of the disc is even with the edge of the cardboard tube. The smaller disc, which is mounted inside of the secondary, should be sawed into three parts, as shown in Fig. 5C, and only the outside sections be used, so that the switch and switch points may be mounted on the end of the secondary coil and connections made from the taps to the switch points.

"One of the square pieces of wood, 5" x 5", should have a large hole cut in the center so that the primary coil may slide into it. The edge of the cardboard tube, upon which the primary is wound, should come flush with the surface of this end, as shown in Fig. 5A.

"The primary coil should be wound with No. 20 enameled wire, beginning about ¾" from the end and up to ¾" from the other end.

The secondary coil is wound with No. 24 double cotton-covered wire, in the same manner as the primary, but beginning ⅛" from the end of the tube, sliding inside of the primary. Taps should be taken at ¾", 1", 1¼", 2½", 3½" and 4½", that is, the end of the winding. To make the taps, a small hole is drilled in the cardboard tube, when the distance specified above is

reached, then the wire is bent so as to pass it through the hole easily, and the loop thus formed is pulled inside of the tube, far enough to reach the end of the coil on which the switch is mounted.

"Two binding-posts should be mounted on the square end supporting the switch, and the end of the winding beginning ⅛" from the edge of the tube connected to one of them, the other one being connected to the switch lever. On the opposite end, to which is fixed the primary coil, should also be mounted two binding-posts for the connection to the slider rod and to the end of the wire nearest the secondary coil.

"The wire of the primary coil should be wound tightly so that the turns do not move when the slider runs along the turns, over the surface of which the enamel has been removed with a piece of sandpaper, or a fine file. The secondary coil, which is mounted on a piece of wood sliding between the two guides from the base, should be mounted so that it does not touch the primary coil when moved inside to tighten the coupling, this to be looked for if the space between the primary and secondary coils is small.

"In order to receive long wave-lengths, it is necessary to use the single slide tuner connected between the aerial and the primary. Where a single slide tuner is used in this manner it is called a loading coil and its purpose is to increase the number of turns of wire between the antenna and ground without increasing the size of the primary of the loose coupler. For best results, a variable condenser should be used across the secondary so as to provide a means of finely tuning this circuit. Another condenser may also be connected in series with the aerial."

COLLEGE STUDENTS MAKE THEIR OWN TUBES—The average amateur, how-

ever ambitious, certainly would never think of attempting to make a vacuum tube, but it is reported that students at Cornell University are able to accomplish this feat. "The construction of the electrodes, as well as the work of the glass," says *Radio News* (New York), "is not the most difficult part of it, as they can be made easily after a little experimenting and after burning one's finger a few times. The difficult point is the evacuation of the tube to obtain a high degree of vacuum. Unless a suitable pump is available, the job can not be accomplished by an amateur. We know of some experimenters who made tubes of the audiotron style with a simple mercury pump. The first tubes were, of course, of the soft variety, but worked very well as detectors. The others, more carefully made, worked well as amplifiers with a rather high voltage on the plates."

HOW TWO GIRLS MADE A RECEIVING RADIOPHONE

THE HOME-MADE receiving radio outfit devised by young Mr. James Leo McLaughlin, an account of which was given in the Radio Department recently, made a great hit with *Digest* readers, many of whom have written to say that they have followed the instructions and made outfits for themselves. A letter from Mr. H. H. Hanna, Jr., of Indianapolis, is so interesting that we can not refrain from publishing it. Mr. Hanna writes:

"On April 21st Dorothea and Alice Hanna, aged 15 and 13 respectively, came home from school with their copy of *THE DIGEST*. That afternoon they pooled their allowances and went down-town to purchase the materials as per the *DIGEST* sketch. They found the clerks in Hatfields' Electric Store interested and they bought the wire there. At a stationery store they bought the clips of two sorts, in each case exceeding the stated sum.

"Before 6 P.M. the interior part was complete. The next afternoon, refusing all help (from father and brother), they strung the aerial and attached the ground wire. Owing to a slight misunderstanding of instructions they had no real success until Monday evening when the greater part of a program was received. This, when many expensive sets reported only fragments or no sounds at all. Tuesday, in spite of continuous moisture, gave hours of pleasure to the young owners.

"These girls have never studied physics, had never seen or heard wireless, and had assistance only in driving the iron pipe into the ground, and in securing the switch on the side of the house outside the second-story window. The volume of sound is that of a closed Victrola; and the announcer's voice and piano numbers come in most clearly.

"We think that these young girls are the first to make this outfit from *DIGEST* specifications. The cost for single ear-piece, 100 feet of copper wire, knife, switch carton, wire chips and galena has been \$6.30, which we think is well invested."

The mail that brought word of the very interesting achievement of these Indianapolis schoolgirls brought other letters from various parts of the country, including Maine, North Dakota, Colorado, Michigan, Ohio, Tennessee, and Florida, commenting on the "simplest radio set," or asking questions as to its use. A question many times repeated concerns the range of the apparatus. One correspondent is more than a hundred miles away from a broadcasting station. Another is anxious to reach out to Chicago, which is 600 miles away. Will the simplest radio set cover such distances?

The answer is that neither this simple set nor any other radio receiving outfit that uses a crystal only for detector can be depended on to cover a range of more than from fifteen to perhaps twenty-five miles. There is no absolute distance limit. Atmospheric conditions modify the range. Receiving is usually much better at night than in the daytime. On occasion, without known cause, there will be a marked increase or a marked decrease of range. Then, we now and again hear of an exceptional outfit or an exceptional operator. One boy, living in

Orange, New Jersey, listens in on Pittsburg with a receiving outfit, using a tiny crystal. But such an experience is altogether exceptional. Any one who makes or buys a crystal-detector set hoping to hear the program of broadcasting stations more than twenty-five miles away is almost certain to be disappointed.

If longer distances are to be covered, it is necessary to have a vacuum tube (otherwise known as audion, electron-tube, or triode) for detector; and for very long ranges other tubes are added, giving so-called amplification; usually in connection with the Armstrong "feed-back" circuit. Details as to construction of such sets will appear from time to time in this Department.

In answer to other questions it should be explained that the "crystal" used as detector in the simplest type of radio receivers

is a mineral, having the peculiar property of permitting one phase of an alternating high-frequency electrical current to pass freely, and the other phase much less freely; with the result that the current is "rectified," and thus made suitable for influencing the diaphragm of the telephone receiver. Only a few types of minerals, to be had at radio supply stores, will answer for this purpose. Pieces of glass or coal or other minerals can not be used. Nor can the ordinary telephone receiver be substituted satisfactorily for the specially designed one used in receiving radio messages. The principle of operation is the same, but the radio receiver ear-piece has a resistance of from 1,000 to 3,000 ohms, as against the 75 ohms of the ordinary telephone receiver.

One correspondent notes that no mention of electricity is made in connection with the account of the simplest outfit. No local supply of electricity is required in connection with any

crystal-detector receiving outfit. That is one reason why outfits of this character are so cheap and so popular. The user of a vacuum-tube set extends the range of his hearing, but must pay for the privilege. The tube itself is relatively expensive, and two types of electric batteries are required; one called the "A" battery, to light the filament, and the other, called the "B" battery, for the "plate circuit." The former is usually a storage battery; the latter, a nest of dry cells, like those used for a flashlight or for call bells.

THE PRESIDENT A RADIO "FAN"—It may be taken as a matter of course, rather than as matter for surprise, that a radio-receiving set has been installed at the White House. Mr. S. R. Winters, writing in *Radio News* (New York), tells us that the President frankly admits his enthusiasm. "The uttermost world," says Mr. Winters, "under favorable atmospheric conditions, constitutes the unlimited field for his 'listening in.' The radiotelephone may be tuned to a wave-length of 25,000 meters, whereas the average receiving outfit of the amateur functions in the neighborhood of 385 meters." An unverified rumor is that the President will presently deliver a message over a radiotelephone, expressing his interest in the new art.

DOROTHEA AND ALICE HANNA,
And their set made from a sketch in *THE DIGEST*.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

SARGENT AN "OLD MASTER"

SARGENT HAS BECOME an "old master." It is a sign of the times, maybe, and the spring exhibition of the British Royal Academy witnesses perhaps the last battle between the old and the new, before the old goes down—not to

individuals. Mr. Sargent said some time ago that he would paint no more portraits, and each time that he breaks his word must seem his last. So the notice he gets at the current Royal Academy has a flavor of the last times. Whoever "J. B." may be, he writes interestingly:

"It is a Sargent year; neither Orpen nor Lavery is in strength. Something authentically perceived and finely stated is there, and no change of vision or method can wear it out. Bigger claims have been advanced. In Sargent, it is argued, the whole art development of an era is expressed: the theory of atmospheric relativity ('values') which the Impressionists discovered a generation before Einstein, just as Velasquez in his art discovered the theory of gravitation before Newton; the wistful fugitive reality of life in this subdivided human assembly called man, which the psychoanalysts are now explaining to us. It may possibly be said of Sargent by the enlightened beings of the next century or so that he alone in the blind groping of the twentieth century struggled toward the light of the dual entity of the human creature as a separate soul-complex and as a visible molecule in an overrated planet.

"A pupil of Carolus Duran, an American born in Italy, who has lived most of his life in England and has associated himself not with the French Salon but with the Royal Academy, an artist without a party, and, it is said, without ambitions, a shy man. Mr. Sargent only seems to become more important as the new men prove him wrong in the points on which he was once thought to be the explorer and authority. The conviction is forced upon us that he is, after all, a genius of the center. His portrait of Lady Rocksavage in the present exhibition would hang well with a Vandyck or a Reynolds. It would make quite a fair Vandyck look indolent and quite a good Reynolds look empty. He is interested in his sitters, and his interest is not that of the courtier but of the pathologist and magistrate. The portrait of Lady Rocksavage clearly excited him. She is a Sassoon, and his best portraits have been of Jewesses. Here he was painting the flower of an ancient and romantic culture. She had broken from her ancient lineage, married into the older English aristocracy, and accepted their traditions. The lady is dressed in a costume of the late Tudors (spiced by a modern magenta in the Medici collar and with other details), and there is pathos in the expression and in the patient, beautiful hand holding the magenta cyclamen flower. Mr. Sargent long ago declared that he would paint no more portraits. He has broken his decision with the steadiness of a famous singer. In this work one conceives an imperative reason. It is one of his most eloquent. The well-known skill is here, the four ropes of pearls, the famous bird brooch with its great pearl drop, and the silver embroidery down the dress which would make Zuccherro, and even Holbein gasp, are technical triumphs to go down the ages, but particularly they demonstrate how easily he could subordinate it all to his portraiture of the sitter's beautiful face. The fineness of the mature Sargent is all here—in the position of the arms and accent of the hands and folds of the skirt carrying down a line of slenderness by which the shape imposed by the dress is changed, the character of the hands that gives a submotive to it all. It is a picture that has nearly all the lasting qualities, and it sets a standard that must seem very unfair to our most high-priced modern artists."

Mr. Sims's portrait of Lady Rocksavage and her little son is the other outstanding portrait in the show, and "J. B." finds it "very exciting to see this brilliant light-weight challenge the heavy-weight champion." We read:

"Mr. Sims has taken the duel into his own country of gay light and decorative background. He presents the lady without jewels in an evening dress of shimmering shot-satin, in an arched loggia

Copyright reserved for the artist by Walter Judd, Ltd., Publishers of "The Royal Academy, Illustrated."

WOULD HOLBEIN GASP

At the opulent art of Sargent's portrait of Lady Rocksavage exhibited in this year's Royal Academy? The portrait "clearly excited him."

oblivion, but to the halo of sanctified antiquity. When we recall the little while ago that a new portrait by Sargent was a sensation of the new school, we see how fast the times move. "J. B.," writing for the *Manchester Guardian*, calls him an "old master." "His paintings nowadays seem works of the past, withdrawn from the vagaries of the period, standing in the Academy like rocks." This year he engages in "a friendly duel" with Mr. Sims, and they each produce a portrait of the same sitter, Lady Rocksavage, that, from reproductions, might easily seem to be two different

of a country house, with her infant son on her knee. It is very decorative, palely charming in color, and more impressionist than the Sargent. The lady's hair in the Sargent is black. Mr. Sims paints it brown, and runs a blue streak through it like a band, giving an illusion of black, and the same blue is repeated in the eyebrows. In the double lighting of the arches the figure is etherealized almost to transparency. There seems to be nobody lower than the waist, and the laughing child looks as tho he might have dropt through on the marble floor. Another weakness of the picture is the absence of *rapprochement* between the mother and child. They seem to have no concern with one another. The composition is subtly bound together by a strip of landscape seen through the arches, and quickened by a lovely blue vase with three red flowers. It is very charming and one of Mr. Sims's best works."

SHAKESPEARE IN PARIS

THE BARD OF AVON has become almost as much a French as a German writer, and his popularity in Continental cities becomes an increasing rebuke to his English-speaking brethren. The present director of the Odéon Theater in Paris, M. Firmin Gémier is a Shakespeare enthusiast and has lately produced a French adaptation of "The Merry Wives of Windsor" under the title of "Les Joyeuses Commères." The play does not follow the original text closely, we are told. "There are transpositions and compressions," the sort of treatment Shakespeare has received time out of mind. "But if liberties are taken," says the Paris correspondent of the London *Observer*, "the author is skilful enough. He has constructed a rollicking piece." M. Gémier has been an attendant at the Shakespeare festival in Stratford this year, and we read of him:

"He is planning other productions. There is to be a veritable Shakespeare season in Paris. 'The Midsummer Night's Dream,' translated by Georges de la Fourchardière, is to be given. The Shakespeare Society, of which he is one of the principal members, is endeavoring to arrange other representations. 'Measure for Measure,' for example, is, I understand, to be given by M. Pitoeff at the Comédie Montaigne.

"Gémier himself, it will be remembered, took a leading part in the Shakespearean fête in Paris last year when the American actor, James Hackett, made his memorable appearance at the Odéon as *Othello* and *Macbeth*, while Gémier appeared as *Shylock*—one of his most successful rôles. He was not then appointed to succeed Paul Gavault as director, but already it was seen that he was predestined to take charge of this theater on the Rive Gauche.

"At the Théâtre Antoine he has played 'Antony and Cleopatra,' 'The Taming of the Shrew,' and 'The Merchant of Venice.' It is possible to consider his interpretations as not altogether true to the spirit of Shakespeare. But for that matter every great actor must have his own conception of the Shakespearean rôles, and nothing obliges him to follow a tradition. To the English mind Gémier's performances have not always corresponded to performances which one remembers to have seen in England. But there is no doubt that Gémier, more than any other French actor, understands Shakespeare.

"We hope to see him in 'Hamlet' before long. Two such dissimilar actors as Mounet-Sully and Sarah Bernhardt have played *Hamlet*, and Mounet-Sully has left on record his bewilderment at the task which was given him by M. Jules Claretie. He read too many critics, too many dissertations upon the central figure of the Shakespearean drama. Troubled by the varying accounts of the true significance of the rôle . . . he took down the translation of Francois-Victor Hugo, read it through simply, and found what he considered to be the key to the part. *Hamlet* is irresolution. That is what Mounet-Sully tried to show."

DICKENS AND GRIFFITH OF THE MOVIES

WHEN MARY PICKFORD or Charlie Chaplin go to England the mobs besiege every step; but D. W. Griffith, who is perhaps the Napoleon of screendom, went ashore recently at Southampton and no one took notice. This probably pleased Mr. Griffith, and it also set the great dramatic critic of the London *Times* moralizing on the manners of the world, particularly of our time. "The world knows nothing of its greatest men," he says in the *Times*, "because its greatest men are not 'stars,' who live by public exhibition of themselves, their faces and their pictures, but quiet people who cogitate in seclusion." Our Newtons and our Darwins are never "mobbed," he adds further, thus assigning Mr. Griffith

THE SAME LADY.

But seen with the eyes of a modern, Mr. Sims, who offers this "light-weight" challenge to the art of Mr. Sargent, "the heavy-weight champion," as seen opposite.

a place among the "great intellectuals," "because Mr. Griffith is evidently an intellectual, too." Outside of the press agents, one wonders if Mr. Griffith has received so exalted a tribute anywhere in his own land. Or has he ever been so carefully analyzed as Mr. Walkley here does it for his paper? It is not enough to assign Mr. Griffith to the intellectuals, but—

"He magnoperates (to use a word of Byron's), he plans in the grand style, he lives for ideas; but he is perfectly modest about it.

He is content to come to this country without ostentation. He is a pioneer, by his own admission, rather than an inventor. That is to say, he has opened up new paths in Film Land, under the guidance of ideas supplied to him from outside. His best ideas, it appears, have come to him from Dickens, who has always been his favorite author. That at once endears him to us. It would be interesting to inquire who is the favorite author of most film-producers. Would it be wrong to guess Nat Gould? Dickens inspired Mr. Griffith with an idea, and his employers (mere 'business' men) were horrified at it; but, says Mr. Griffith, 'I went home, reread one of Dickens's novels, and came back next day to tell them they could either make use of my idea or dismiss me.'

"Mr. Griffith found the idea to which he clung thus heroically in Dickens. That was as luck would have it, for he might have found the same idea almost anywhere. Newton deduced the law of gravitation from the fall of an apple; but a pear or a plum would have done just as well. The idea is merely that of a 'break' in the narrative, a shifting of the story from one group of characters to another group. People who write the long and crowded novels that Dickens did, especially when they are published in parts, find this practise a convenience. You will meet with it in Thackeray, George Eliot, Trollope, Meredith, Hardy, and, I suppose, every other Victorian novelist. It is less common to-day because our novels are shorter, less crowded with personages, more nice about form. But it has not, of course, disappeared. I found it myself only the other day in the popular writer, already mentioned, Nat Gould, whom I dipt into because I had been told his sales exceeded a score of millions, and whom, I am bound to confess, I found quite readable. Mr. Griffith might have found the same practise not only in Dumas *père*, who cared precious little about form, but also in great artists like Tolstoy, Turgeniev, and Balzac. But, as a matter of fact, it was not in any of these others, but in Dickens that he found it; and it is significant of the predominant influence of Dickens that he should be quoted as an authority for a device which is really common to fiction at large."

When Mr. Griffith goes to England and discourses about Dickens he ought to remember that it is a pastime of old and young there to set themselves examinations on the details of this author's work. So it is not strange that Mr. Walkley finds Mr. Griffith's devotion to Dickens a "little unenlightened." Beginning apparently with bad literary criticism:

"Much of the work of Dickens," he says, "was modeled on Fielding." This is very wide of the mark. Dickens himself declared his preference for Smollett, and if he had an 18th-century model that model was certainly Smollett rather than Fielding. Dickens had nothing in him of Fielding's irony or philosophy of life, but he had much of Smollett's tendency to caricature. The Victorian who modeled himself on Fielding was not Dickens but Thackeray. These are the commonplaces of criticism. My only excuse for repeating them is a respectful interest in Mr. Griffith's excursions into English literature—which seem to have been a little wayward and to lead him to unsound conclusions. Thus he is of the opinion that 'the film at the present time is relatively in precisely the same position as the English novel was before Fielding began to write.' This is an interesting position; but it is of no use as a mere *obiter dictum*; it needs support. I should much like to hear Mr. Griffith argue it out. On the face of it, I confess I can see little, if any, analogy between the growth of the English novel and the evolution of the film.

"Again, Mr. Griffith makes too sharp a distinction between novels and plays when he ascribes the process of 'switching off' (which seems to be the film phrase) to the one kind of storytelling and denies it to the other. No doubt the 'straightforward' method is more the rule on the stage than in the novel. The reason why is fairly obvious—the difference between the attention of a spectator and a reader. A break in the continuity of the action is much more distracting to the man who is looking on than to the man who is leisurely reading in his armchair. What used to be called 'cumulative' interest is of greater urgency in the theater than in the study. But it would be possible to instance many plays that 'switch off' from one set of the personages to another set—as Shakespeare switches off from the English camp to the French camp, from the English Court to the French Court, and back again. *A priori* I should have thought 'switching off' in films likely to confuse the spectator; but Mr. Griffith, who, if any one, ought to know, says it makes them more interesting and more powerful. One thing the film can do in this way which strikes me as a real asset, and that is the superposition

of one picture on another, to show you something that is passing through the mind of a person on the screen. That is a thing that the 'speaking' drama can at best only clumsily accomplish. I suppose we owe this device also to Mr. Griffith, who evidently has a real genius for this new and fascinating art of 'motion-pictures,' which, he tells us, I hope truly, is as yet only in its first crude pre-Fielding stage."

THE PULITZER AWARD

THE UNKNOWN SOLDIER has been a symbol to his fellow fighters as well as to the nation that did him the honor of burial at Arlington. To the former he has seemed a debt and a duty paid once and for all by a nation who now scramble on in indifference to further claims of our known and living soldiers. Meantime a tribute which aims to express what the nation felt in burying the Unknown Soldier at Arlington is crowned with one of the Pulitzer prizes. The writer now emerges from anonymity as Frank M. O'Brien of the editorial staff of the New York *Herald*, and receives the prize of \$500 "for the best editorial article written during the year, the test of excellence being clearness of style, moral purpose, sound reasoning and the power to influence public opinion in the right direction." It was published in *The Herald* on November 11, 1921, and is here reprinted:

THE UNKNOWN SOLDIER.

"That which takes place to-day at the National Cemetery in Arlington is a symbol, a mystery and a tribute. It is an entombment only in the physical sense. It is rather the enthronement of Duty and Honor. This man who died for his country is the symbol of these qualities; a far more perfect symbol than any man could be whose name and deeds we knew. He represents more, really, than the unidentified dead, for we can not separate them spiritually from the war heroes whose names are written on their gravestones. He—this spirit whom we honor—stands for the unselfishness of all.

"This, of all monuments to the dead, is lasting and immutable. So long as men revere the finer things of life the tomb of the nameless hero will remain a shrine. Nor, with the shifts of time and mind, can there be a changing of values. No historian shall rise to modify the virtues or the faults of the Soldier. He has an immunity for which kings might pray. The years may bring erosion to the granite but not to the memory of the Unknown.

"It is a common weakness of humanity to ask the questions that can never be answered in this life. Probably none to whom the drama of the Unknown Soldier has appealed has not wondered who, in the sunshine of earth, was the protagonist of to-day's ceremony. A logger from the Penobscot? An orchardist from the Pacific Coast? A well-driller from Texas? A machinist from Connecticut? A lad who left his hoe to rust among the Missouri corn? A longshoreman from Hell's Kitchen? Perhaps some youth from the tobacco fields, resting again in his own Virginia. All that the Army tells us of him is that he died in battle. All that the heart tells is that some woman loved him. More than that no man shall learn. In this mystery, as in the riddle of the universe, the wise wonder; but they would not know.

"What were his dreams, his ambitions? Likely he shared those common to the millions: a life of peace and honest struggle, with such small success as comes to most who try; and at the end the place on the hillside among his fathers. To-day to do honor at his last resting-place come the greatest soldiers of the age, famous statesmen from other continents, the President, the high judges and the legislators of his own country, and many men who, like himself, fought for the flag. At his bier will gather the most remarkable group that America has seen. And the tomb which Fate reserved for him is, instead of the narrow cell on the village hillside, one as lasting as that of Rameses and as inspiring as Napoleon's.

"It is a great religious ceremony, this burial to-day. The exaltation of the nameless bones would not be possible except for Belief. Where were Duty and Honor, the well-springs of Victory, if mankind feared that death drew a black curtain behind which lay nothing but the dark? So all in whom the spark of hope has not died can well believe that we, to whom the Soldier is a mystery, are not a mystery to him. They can believe that the watchers at Arlington to-day are not merely a few

thousands of the living but the countless battalions of the departed. 'Tho he were dead, yet shall he live'—there is the promise to which men hold when everything of this earth has slipped away.

"All the impressive ritual of to-day would be a mockery if we did not believe that, out in an infinity which astronomers can not chart or mathematicians bound, the Unknown Soldier and all the glorious dead whom we honor in his dust are looking down upon this little spinning ball, conscious of our reverence. And when noon strikes, signal for the moment of silent prayer, few of those who stand with bared head will lack conviction that the rites at Arlington are viewed by other than mortal eyes. Only in that spirit may we honor the Unknown Soldier and those who, like him, died for this Republic.

"Unknown, but not unknowing!"

This prize and others in the field of public arts, known as "The Joseph Pulitzer prizes in American journalism and letters," are bestowed in such directions as will be likely to bring forth dissenting comment from our irresponsible columnists. For—

"Booth Tarkington again has won the Pulitzer prize of \$1,000 for the American novel best presenting 'the wholesome atmosphere of American life and the highest standards of American manners and manhood.' The prize-winning novel was 'Alice Adams.'

"Eugene O'Neill's 'Anna Christie' won the \$1,000 prize for the American play best representing 'the educational value and power of the stage in raising the standard of good morals, good taste and good manners.'

"The \$2,000 prize for the 'best book of the year upon the history of the United States,' goes to James Truslow Adams for 'The Founding of New England,' and the \$1,000 prize for the 'best American biography teaching patriotic and unselfish services to the people, illustrating by an eminent example, excluding as too obvious, the names of George Washington and Abraham Lincoln,' to Hamlin Garland, for 'A Daughter of the Middle Border.'

"Edwin Arlington Robinson's 'Collected Poems' won the \$1,000 prize for the best volume of verse published during the year.

"The Arlington ceremonies for America's 'Unknown Soldier' last November provided the material from which were written the prize-winning newspaper stories and the prize-winning newspaper editorial of the year.

"Kirke L. Simpson, of the Washington staff of The Associated Press, for his stories on the return of the 'Unknown Soldier,' was awarded the \$1,000 prize for the 'best example of a reporter's work during the year.'

"The prize of \$500 for the best newspaper cartoon went to Rollin Kirby, of the New York World, for his cartoon, 'On the Road to Moscow,' published August 5, 1921.

"The New York World won the gold medal for 'the most disinterested and meritorious public service rendered by any newspaper during the year, for its expose of the Ku-Klux Klan.'

"Twenty-six newspapers in widely separated sections of the United States joined The World in the publication. Some had been invited to participate; others requested The World to let them share in the public service by publishing the articles expressing their belief in the accuracy and fairness of the presentation."

ALL THE WORLD A MAIN STREET

HAS SINCLAIR LEWIS a "Main Street" complex? That's what the ultra-modern would ask, and the author of that best seller returns from a year's wanderings abroad to report finding Main Street in every hamlet he visited. "Main Street runs up and down and all around the world," he says to a New York World reporter who caught him coming down the gangplank and at once divined in the contemner of our Middle-Western wildernesses "an even greater respect for sophistication and urbanity." By the World observer Mr. Lewis is seen dressed up in such approved details as these:

"He has a Fifth Avenue blush to his fingernails, a Shaftesbury Avenue nonchalance with cigarette ash, a Place de l'Opera tolerance for all the good bad things of life, and that promenade deck ability in jumping to his feet, bowing and making one feel like an abandoned Comte."

Mr. Lewis evinces a protesting modesty about analyzing the foreign Main Streets after a short residence there, but makes a few staggers at it:

"An obvious difference between the Main Street of Bearsted, Kent, where I stayed, and our Main Street in America is that the English town worships the old, our town the new. But that provincialism, that egotism that refuses to look beyond one's own town walls—that's in every person I ever met. We're all from Main Street. It's a human weakness.

"While England is rapidly being Americanized, France and Italy still have the provincialism of the cow that is

satisfied with its own pasture. I have this to say for European provincialism: Thank God, it doesn't try to proselytize! That's the curse of American Main Street. We're always furious to rearrange some one's backyard in Thibet.

"What we need is more and more sophistication. If I had the power I'd make Henry Mencken the Pope of America. He spreads just the message of sophistication that we need so badly. But still our dear old Main Streets are positively idealistic so far as money is concerned, compared with Europe, where money grubbing is a mania. I'm afraid Europe has reached her zenith. America and Russia are the lands of the future."

Mr. Lewis brings us cheer that America begins to count in a literary sense with the people who really count over there:

"There is a great deal of respect in England for American letters. I found that Hugh Walpole, Willie George—W. L. George—Wells, Galsworthy, Somerset Maugham, and May Sinclair read everything they can get from America. It's the minor critics trying to be clever who always want to put an American in his place. They are offensive—and of course they are dangerous to every one.

"English writers and the English public are woefully ignorant of what has been written in America. Almost any Englishman feels he is qualified to dismiss American literature with a sneer, but if you ask him to name some American authors, he has heard only of Upton Sinclair, Jack London or Winston Churchill."

ON THE ROAD TO MOSCOW.
THE PULITZER PRIZE CARTOON OF 1921.

RELIGION-AND-SOCIAL-SERVICE

ENDING THE NARCOTIC MENACE

"**S**NOW PARTIES," which are said to have become so prevalent as to menace American civilization, will be made impossible by the Jones-Miller bill governing the manufacture, importation and exportation of habit-forming drugs, which has been passed by Congress and made law by the signature of President Harding. By striking at the source of supply, the bill goes to the root of the evil, and, in time, will eliminate it altogether. It will also afford protection to China by preventing the transshipment in bond of opium consigned to Japan, for instance, but, in violation of international agreement, ultimately designed for distribution in the country which has made such heroic effort to keep it out. It is not yet realized, we are told, that drug addiction is also rapidly spreading in this country, and that the habit of taking hypodermic "shots" and "sniffing coke" is becoming wide-spread among all classes of society, while the criminals are said to be finding opium a tonic for their trade. Nor is the evil confined to the centers of large population, but is permeating even the village hamlet, and what is worse, is affecting the younger generation. The number of addicts is variously estimated, one figure placing it as high as 5,000,000. America, writes Edward Marshall in the *Denver Rocky Mountain News*, is, of all the nations, the greatest user of opium and its derivatives. During the first ten months of 1919, he says, this country imported 250 tons of crude opium, enough to produce thirty-five tons of morphine, whereas one ton would have been enough for legitimate medical needs. The enormous consumption of habit-forming drugs in America can be better understood, he goes on, by comparing our opium imports with those of other countries. "The combined population of Germany, France and Italy is about 133,000,000, while that of the United States is 105,000,000, yet we imported ten times more crude opium than those three countries together."

Importation and exportation of opium prepared for smoking was prohibited by the Hague Convention of 1912, and this particular regulation has been adhered to by the United States. But narcotic drugs, such as morphine and cocaine, have been manufactured in the United States and exported, we are told, to other countries, especially to Japan, and then transshipped to China or smuggled back into the United States and illicitly peddled to our own people. Thus, says Representative Miller, one of the sponsors of the bill, in an interview with Ashmun Brown, correspondent of the *Seattle Times*, "in the first case the 'curse of the people of China' was the result, and, in the second, the 'curse of the people of the United States.'" Under the former law the American Government did not inquire

into the use to be made of these drugs, provided the country to which they are shipped had some form of regulation, as required by the Hague Convention, and, continues Mr. Miller:

"In the instance of Japan, she can and does transship the drugs into China and justifies her conduct upon the grounds that transshipments and in-transit shipments are not 'imports' within the meaning of the Japanese law. The illicit use of morphine and cocaine is spreading to such an alarming extent in the United States and in other countries as to cause deep concern for our civilization. The number of drug addicts in this country is now alarming, and reports from every locality indicate these

unfortunates are on the increase. It is our duty first to protect our own people from the illicit use of these drugs and we should in all good conscience assist the Chinese and other nationals who are now attempting to heal themselves not only of the use of opium prepared for smoking but other narcotic drugs equally deleterious.

"The United States and England are the two countries producing the greatest amount of manufactured opium and cocaine and coca-leaf products. Regulation of our exports, therefore, deals with but one-half of the problem of preventing manufactured drugs from reaching foreign lands which may make illegitimate use of them. England, while maintaining drastic export restrictions by licenses issued under the British dangerous drugs act, has by our previous faulty legislative treatment of in-transit shipments been unsupported by this country in enforcing British laws. By the enactment of this bill the two principal producing nations

of the world will have united in stamping out the illicit use of narcotic drugs the world over, and especially will this legislation be of more assistance to the people of China than of any other foreign country in undertaking to heal themselves of a vice which threatens to fasten itself deeply upon them.

"It will in a greater respect, however, save our own people from the activities of the smuggler and the illegitimate trafficker. In our judgment there never has been a more important measure touching the general welfare of our people than this bill."

Seattle is said to be one of the vantage grounds of the opium smuggler, and the people of that city have become actively engaged in waging war on the traffic. The China Club is a Seattle organization designed to aid China in its fight against the importation of opium, and now the White Cross has been added to the organized foes of the trade. It faces one of the greatest problems any organization ever faced in the history of America, that of saving thousands now addicted to the use of opium derivatives, says Dr. William K. McKibben, executive secretary of the organization, as he is quoted in *The Times*. The passage of the Jones-Miller bill he considers to be the first step in the final solution of the narcotics problem. Concerning the traffic in China, he says:

"It is a well-known story, or at least Seattle has done its best

Copyrighted by the Star Company.

THE EMBRACE OF DEATH.

—Murphy in the *Seattle Post-Intelligencer*.

to make it well known, that peddlers in narcotics have been distributed throughout all China, deliberately creating addicts by the thousands with no attempt at concealment. Distribution of morphine and cocaine has been made possible by the fact that Japan, until recently, has had four hundred or more post-offices through which the stuff might pass, distributed throughout China with Chinese officials having no authority to stop the traffic.

"The China Club will continue to make its fight for China. The White Cross is just starting its battle to save the 2,000,000 afflicted persons in the United States. Some of these are hopeless, are users of morphine and cocaine because they are simple-minded. Others, including many former soldiers and sailors, have learned to depend upon narcotics because of unwise administration of the drugs by physicians.

"The saddest case of all concerns the young men and women of the country who have been led astray by older addicts. Some of these are high-school students who have thought it a lark to attend 'snow parties'—to sniff cocaine. The White Cross hopes to save all of these. The White Cross hopes to care for the ones afflicted by no fault of their own. The natural-born criminal class, the simple-minded and degenerates who use narcotics must be handled by the police.

"It has been Seattle's fight from the start and Seattle will continue to fight. What greater thing can be said of a city than that it started a war against an evil that is now enslaving millions of God's creatures—that victory is in sight!"

HELPING THE SAILOR WITH BOOKS

Courtesy of "The Nautical Gazette," New York.

BOOKS BEAT DICE IN IDLE HOURS AT SEA.

And only the lack of libraries aboard ship prevents many of the sailors of our merchant marine from the enjoyment and instruction found in reading good literature.

RESTORING FRENCH PROTESTANTISM

GIFTS FROM American Protestant Churches to their sister churches in France since the Armistice have approximated \$1,500,000, which has been used for rehabilitating and rebuilding the churches damaged or destroyed during the war. In 1921 the American churches sent \$400,000 to France, and during this year, we are told, they plan to give \$175,000 to the Protestant churches of France and Belgium, chiefly for reconstruction work and for the extension of missionary endeavor in the former German colonies. Among the churches rebuilt and being rebuilt, says *The Christian Work*, are those at Verdun, Compiègne, Lille, Roubaix, Epernay, Wanquentin, St. Quentin and Rheims. More help is offered, and—

"Of the amount which it is planned to give this year, \$50,000 will go to the French Foreign Missionary Society to enable it to expand its work in the former German colonies in Africa. Much of the German Protestant missionary work is being taken over by the French. America's gift of \$50,000 for this purpose last year inspired the French Protestants to increase their gifts from 2,000,000 to 3,000,000 francs; \$30,000 of this year's gift from America will be used to complete the purchase of 47 Rue de Clichy, Paris, for a headquarters of the Protestant churches of France, as a memorial of the friendship of the Protestant Churches of America; \$15,000 will go into home mission work in the devastated area; \$25,000 will be used for educational work, partly for the Institut Jean Calvin at Montauban and the Theological Seminary of Paris, and partly for the publication, *Foi et Vie*, whose staff is exercising a wide influence throughout France. The Union Committee of the McAll Mission, the Société Centrale and the Reformed Churches which train Christian workers, will receive \$3,500; \$1,500 will go for Bibles; and the homes of LaForce, a relief institution which houses about five hundred people, will get \$5,000. The American churches will assume one-half the debt of the churches in Belgium, amounting to \$10,000. The Southern Methodist Church has been requested to raise the money necessary for this purpose. The help to the French and Belgian churches is being given through and under the direction of the Federal Council of Churches."

some diversion equally unsuited to his moral well-being. To remedy this situation the American Merchant Marine Library Association, having headquarters at 82 Beaver Street, New York, recently opened a "book-drive" to begin furnishing all the vessels of the merchant marine with reading material which will be both instructive and entertaining. The organization has already furnished libraries to 206 ships plying from the Atlantic coast and to 117 vessels operating on the Great Lakes; but, we are told, there are hundreds of vessels of American registry that have no crew libraries on board. That reading material is appreciated by seamen is amply testified by captains and other officers of vessels on which libraries have already been placed. The books most desired, it is said, are fiction, and it is remarked that Captain Marryat is a favorite author. Books on technical subjects come next, with a large demand from men who are training for promotion. It is easily seen, therefore, we are told, that a great patriotic work lies ahead until the point is reached when no American merchant vessel puts to sea without books—"friendly books, carrying a reminder to our sailors, as they travel to the ends of the earth, that they are not forgotten by Americans at home." And who knows what a good book may not do for a sailor lad with the wide seas before him? asks the *New York Evening World*, remarking that

"Joseph Conrad learned English and French while a boy at sea. He learned them so well that at one time he could not decide which he would make the medium of expression for the most wonderful seas stories ever written. There may be in our marine to-day a budding Conrad. But even if there is not, there are plenty of sound-hearted American boys who would like to improve their minds by good reading. Try to help them out."

Only those who have been at sea, earning a living thereby, fully realize the spiritual, as well as the physical, isolation of the sailor, says the *Publishers' Weekly* (New York). The man at sea "misses acutely scores of things that people on shore take for granted; most of all, the society in leisure moments of congenial friends. Thus books at sea become far more than so much reading matter. They fill the gaps in lonely lives. Experience has shown

that American seamen avail themselves eagerly of books. They are read, and reread—some are literally read to pieces."

Now, with the eight-hour day for seamen, the sailor has more time on his hands, writes Milton Raison in the *New York Tribune*. Prior to the opening of the library service the sailor had little or nothing to read. The few magazines passed from hand to hand were soon in hopeless condition, and cheap books bought at second-hand shops fared the same fate. Mr. Raison, who is a poet, ex-sailor, and now a dispatch agent of the American Merchant Marine Library Association, says:

"In fact, reading-matter was the only part of a sailor's luggage that was unsafe at sea. A book or magazine would be snatched from under a pillow without the slightest compunction. Reading-matter found around the ship belonged to the finder. In order to finish his book the sailor had to hide it ingeniously. Perhaps more fights started over lost magazines and books than over crap games.

"The popularity of gambling aboard ship is another cause of the lack of diversion at sea. Sometimes groups of sailors gather like children and repeat to one another plots of stories they have read or seen in theaters on shore. The old mariners are particularly noted as story-tellers. They gather a coterie around them and weave yarns and tell the old legends and sagas of the sea to their heart's content. The chantey is a form of saga. Thus there is a sort of primitive method of story-absorbing on board a ship.

"Once while serving as messboy on board a small passenger-ship I discovered that one of the quartermasters in my mess was an artist. He showed me excellently executed sketches of ships and marine scenes. That night the idea came to me to read Masfield's 'Dauber' to him. He had never heard of either the poem or the author. I was flattered by the attention I received. The quartermasters made room for me in their small room, and then sat down on their respective bunks. From the time I started till the end there was very little interruption. One of the quartermasters interfered several times to take exception to some of Masfield's sea terms. But when I finished they all seemed delighted and a bit astonished. They hadn't dreamt that this life they had led and thought nothing of could be put into such an elusive and difficult form. It was this old, familiar life deified. My 'Dauber' was passed around from hand to hand then, and so great was its popularity that I was known as the Dauber from one end of the ship to the other."

THE "Y'S" GREAT RECORD

THE GROWTH OF THE "Y" is one of the romances of modern Christianity, says *The Christian Work* (Undenominational), in calling attention to the "gratifying fact that 11,624 men and boys from the Association united with the Church last year, an increase of four-fifths over the record of 1917." In the same period, we are told, the number of boys and men studying the Bible under the auspices of the Y. M. C. A. grew by more than one-half, the number now being 180,000. The number taking educational courses increased at a slightly greater rate, and is now close to 130,000, with 15,000 active students in the correspondence. In other words,

"More boys and men study under the auspices of the Y. M. C. A. than attend all the denominational colleges in the country or in the forty-two State universities. There are to-day four hundred United Y. M. C. A. schools, running in size from less than one hundred students to institutions with five thousand students in Boston and Detroit. Twenty of the Association schools have received the right to confer one or more academic degrees. The students themselves last year paid 94 per cent. of the \$3,500,000 needed for the support of the schools. The work of the Association for colored men and boys is also growing rapidly. Twelve cities have already availed themselves of the standing offer of the Jewish merchant prince, Julius Rosenwald, to give \$25,000 to every city which will raise \$75,000 for a Colored Christian Association. The colored membership of the Association has more than doubled in the last ten years. The Association has prospered remarkably in the acquisition of property. It almost seems at times to lay too great stress on the financial aspects of its success. But it is an impressive fact that the value of the Association's property is now worth \$140,000,000, having multiplied

nearly seven times since 1900. The Association received contributions of something over ten million dollars for its work last year. But the business depression of 1921 has cut into the income available for the international work, so that the 'Y' was neither able to increase the number of its foreign workers, nor even to send out men to replace the thirteen who were obliged by sickness or other cause to return to America last year."

THE DANGER OF HIGH MINISTERIAL STANDARDS

PLACING HIGHLY EDUCATED MINISTERS in backward communities is like trying to fit a square peg in a round hole for all the good it may do, since the raw fact of the matter, we are told, is that very few preachers trained and familiarized with the conveniences and comforts of modern home life in prosperous communities can ever be persuaded to become pastors of the little broken-down churches in these exceptional districts. Not only are such preachers discontented with their lot, but their high degree of literacy ill suits them to pastorates where much learning is neither appreciated nor understood. It works like a two-edged sword. Yet, says *The Herald of Gospel Liberty* (Christian), practically every denomination has grown into the habit of thinking so chiefly of its churches in the city and in the more favored communities that they are requiring a complete college education for all of their ministers, and on top of that perhaps a seminary training. *The Herald* makes the point that—

"This program, which is being adopted by nearly all denominations, is making it almost impossible for backward communities to secure pastoral oversight from other than the preachers of backward denominations which require no educational standard for their ministry. These are usually the advocates of peculiar dogmas—such as the 'holy rollers,' for instance. Thus the religious situation of these neglected sections becomes more serious every year, and is likely to be turned over almost entirely to freak sects unless larger denominations devise some plan of furnishing a type of minister who will be willing to work under such conditions and live in such communities. It is a wonderful field for the genuine mission spirit—and a field against which the larger interests of the denominations are militating quite seriously just now."

Along with this dearth of ministers in backward communities, due partly to the new program of the Church, is a similar dearth of physicians caused by the high modern standards required by law for medical practitioners. As a result,

"The good old 'family doctor,' who knew little of modern medical science but a great deal of common home remedies and usually a great deal of common horse sense, who always heretofore grew up in such communities and remained there to take adequate care of its medical needs, is fast passing out of existence. Such men are not able to meet the high tests now exacted for medical practice. And the young doctors who have spent many years in preparing themselves to meet these new medical requirements simply can not be persuaded to go back and live and work in such environments. Even if the fees could be made large enough to make such a practice profitable, the long ugly drives over all kinds of roads, and the kind of folks and homes to which they would have to minister would soon become so distasteful that no amount of money could hold most of them there. The consequence is that there is a most serious shortage of doctors in many such sections, and an actual suffering for medical attention in many places—and there is a tendency toward almost prohibitive prices in some communities. . . .

"Unless our medical associations devise some plan of admitting to the profession the kind of men who can serve and will serve such communities—serve them just as they now are and will be for a generation to come—and unless the various denominations do likewise for the ministry, a most grievous injustice will be worked increasingly against these unfortunate communities. *The Herald* is heartily sympathetic with the religious and medical leaders who are agitating for better-trained men in their professions; but there rests upon these leaders a moral obligation to recognize the fact that a uniform rule will not do and that our ministerial groups and our medical associations must find some practical way to meet the imperative needs of this complex situation."

Greenland's icy mountains are icier than Greenfield's

NO MATTER what kind of heating plant you have it will be well worth your while to send for the illustrated book that explains the investment features of the IDEAL TYPE A HEAT MACHINE. A postal card will bring it at once.

BUT they have good old-fashioned winters in Greenfield, Mass., and the owners of old-fashioned furnaces spend much time shoveling coal.

Two years ago Mr. W. E. Nichols took out his old-fashioned boiler and installed an IDEAL TYPE A HEAT MACHINE. This is what he writes:

"It consumes one-third less coal than any other boiler I have had anything to do with."

"The most surprising thing is what becomes of the clinkers and ashes. They seem to be consumed in some way, as I get less ashes in three days now, than I used to get in one day from the boiler I took out."

The explanation is that the IDEAL TYPE A HEAT MACHINE does not waste heat either up the chimney or in coal half consumed. Beautiful and aristocratic as it is, it works harder than any boiler ever constructed, and pays for itself in the fuel it saves.

THERE is the largeness of sea and air spaces in these lines from the *American-Scandinavian Review* (New York), which we quote from the "Spring Literary number." The mystery of a mysterious land speaks also.

PROVIDENCE

By MATTHIAS JOCHUMSSON

Translated from the Icelandic
by Jakobina Johnson

What is that light, which points the way for me,—
The way where mortal eyes no light can see?

What is that light, on which all light depends
And with creative power through space descends?
What writes of "love" on youth's illumined page

And "life eternal" on the brow of age?

What is thy light, thou fond and cherished Hope
Without which all the world would darkly grope?
That light is God.

What is that voice I hear within, through life,
That echoes through our ranks of common strife?—

A father's voice, in wisdom to appraise,
A mother's voice, to comfort all the race.

What voice alone attuned perfection sings
When all our world of song discordant rings?

Turns into day the darkness of the throng
And agonies of death to hopeful song?

That voice is God.

What mighty hand maintained protecting hold
Upon this reed, through direst winter cold?

And found my life, a dormant wind-tossed seed,
And planted it, supplying every need?—

The hand whose torch must touch the sun with light,
Whose shadow means calamity and night.

The hand whose law has written its control
Upon each lily and eternal soul?

That hand is God.

Not often, we take it, is a woman found
engaged in such work as Sara, here described
in the *London Spectator*, and pleasant is
the fancy that links her with Cleopatra
and other floating princesses, especially
Cleopatra:

THE BARGEE

By CAMILLA DOYLE

Sara with the vivid eyes
Glittering blue, in those black folds
Of your monstrous hood that holds
Thoughts which I surmise
To be calm, to be fantastic,
As slow water, as the plastic
Change of wind-waves in your hood—
If I should
See you, Sara, in a dream
You would seem
Egypt's unforgotten lady,
Spreading such a massive shady
Setting round your great eyes' gleam—
Like the wig of strange description
Round the face of an Egyptian;
Such a thought should be your gift
To the dream wherein you'd drift.

Sara whose clear voice outringing,
Laughing tempests broadcast flinging,
Sets the river-echo singing,
If I saw you in a dream
You would surely seem
Of a Tudor haughtiness,
When you shout to all at random,
Stamping in a glorious tantrum,
With a mien of fierce princess,
One more Great Queen Bess.

Sara with that sudden grace
Sharpening to a smile your face,
If in dreams I saw you drifting,
Setting half-caught vistas shifting

Round you, then for sure
I should think that smile the lure
Of a princess set adrift
In some ancient Ganges boat,
And my dream would make you drift
Down wine-black rivers marble-cliffed,
On some incredible moonlight tour,
Near ivory locks at night to moor
Ebony prows of Indian making—
And with waking
Smiles like yours would still endure.

We rely on *Scribner's* at least once a month, but the June issue contains a meager supply of verse. The poetry is better than the theme here, for "potentates" have plenty of swift devices for exchanging scenes.

COUNTRY-BRED

By WILLIAM HERVEY WOODS

High in the cañon walls men call the street,
He reigns in sleek seclusion, potentate
O'er half the earth, cocooned in gilded state
And silken ease that once a monarch's suite
Alone endowed; and at his bidding meet
Trade's commandeers, on whose bluff debate
Not only marts, but kings and councils wait
To know if hungry nations yet may eat.

But now he sits, head bent and eyes a-dream,
A lonely man there in his lofty room,
And wonders if along the old home hill
Dogwood's in snow, and o'er the purring stream
A haunted wind breathes of the wild-grape bloom
While all the dusk mourns with the whip-poor-will.

Not much poetry can be inspired by conferences that fail such as Genoa failed. But to mark it as it passed we gather up these two that express the hopes instead of the failure. Phillpotts's lines appear in the *London Observer*:

HEART AND BRAIN

(The Genoa Conference)

By EDEN PHILLPOTTS

Night-foundered Heart had lost her ways
Amid long strivings of good-will,
Noble endeavors come to nil,
And heaven-high futilities
Pursued in faith, with passion strong
To slay the evil, right the wrong.
Now wan and weary, faint and spent,
For some new guiding star she gropes;
To light another vision, blent
Of her great will and deathless hopes.

And Brain, grown bitter with the blows
He'd beat upon the vile and base,
Staggered before the iron face
Of huge, unconquered human woes.
He smote and smote and could not see
What lacked his mighty energy,
But marked each stroke deflected sheer
From armed ignorance and greed
That scorned his challenges austere,
Flouted the clarion of his creed.

O generous Heart, O Brain steel-bright,
Foregather, come together, rise,
And dawn shall break upon the night
Of your divided destinies,
To wake the weary soul of earth
Sunk in long impotence and dearth.
When Reason mounts her empty throne—
For orb and sceptre Heart and Brain—
Mankind shall come into his own
And human Love with Wisdom reign.

THE *Toronto Globe* printed this from one who saw the hopes of a new Columbus:

GENOA, 1922

By J. LEWIS MILLIGAN

Fair Genoa! Italia's ancient pride!

Flanked by the hills and fronted on the sea;
At once the symbol of Stability
And Enterprise: the ever-pulsing tide
Lured thy great son to venture on its wide
And perilous wastes, o'er which in visions he
Beheld a Western World which was to be
A home where migrant peoples would abide.

Fair Genoa! Give to war-worn mankind

A new Columbus, who with ultra sight
Can see a world to which our eyes are blind,
Where Love is Consort to the reign of Might,
Where Peace at last shall clasp the hand of Right,
And Brotherhood shall all the nations bind!

It's amusing to find this poem in the *New York Nation*, and also heartening to see that editors have not become bereft of a sense of humor:

THE BELL

By JAMES RORTY

On the day that I stopped begging at the heels of life—

On that day, as I sat on a high hill, looking at the sun,

I heard a bell strike far up in the sky, and my heart swelled,

And into my heart with laughter came trooping
the lovely young-wise children of the wisdom
of the earth.

Years had passed before that day; each year the
circling seasons found me sad and mournful
in the same place.

The fives of spring played to me, the green grass
cried to me, but I would not dance;

The winds of autumn tugged at me, but I would
not sail;

Love found me frightened, questioning, and swept
on.

In terror I fled to the schools, and pulling at the
Philosopher's beard, asked why, and why?

I listened respectfully to the wheeze and clatter
of the editor's office;

I slept through the professor's lecture and humbly
knew that I must be respectful, even while
I slept;

There was not a drum beaten or a tambourine
clashed anywhere but I was there, beating
time, beating time.

Until one day I heard a sweet bell pealing, far in
the blue sky pealing, pealing;

And into my heart with laughter came trooping
the lovely young-wise children of the wisdom
of the earth.

It is long since I have seen the philosopher, but
my laughing heart tells me he is still drawing
triangles in the sky.

Having business elsewhere, I left the editor plea-
suring in the midst of his favorite indignations.

Sitting at the foot of a stone, listening to the blue
jays squalling wisdom in the trees, I could find
a pension in my heart for every professor in
the world.

On the day that I stopped begging at the heels of
life, lo,

The brown-robed mother of the western hills
taught me quietness;

The blue-eyed mother of waters taught me peace.
Love shall have his toll of me; I have honey for
every bee and seeds for every winging bird.

When you say "Good Morning"—

HORRIBLE HOLLYWOOD, HOME OF HOKUM

HOLLYWOOD IS A HORRIBLE HOLE, and Karl K. Kitchen, who has been investigating the place for several months, says he can prove it. It is such a horrible place that, conjectures Mr. Kitchen, the late William Desmond Taylor, reported to have been murdered there, really committed suicide rather than remain in Hollywood another fortnight. It is a "forlorn suburb," there is "nothing doing" either in the daytime or after dark, the "café life" consists of lunching in cafeterias. You can determine how long any one has lived in

knows Hollywood and its inmates, the stories that have been printed about its gay life are a joke. The tragedy of it is that they are taken seriously.

There is no more necessity for you to put on asbestos mittens or sprinkle this page with chlorid of lime because this story is about Hollywood than there is for Eastern visitors in this wretched suburb to wear signs reading: "Not in the Movies—Don't Shoot."

In the first place, no one but an inmate can take this bungalow Greenwich Village seriously. However, that is no reason why it should be maligned in the public prints. Hollywood is simply that part of Los Angeles in which the majority of its motion-picture studios are located. Consequently a third of its population—between fifteen and twenty thousand souls—are in some way connected with the motion-picture industry. At the present time most of them are only connected with the studios by telephone—but we'll come to that later. Hollywood is in no sense a city. It has no local government, no art galleries, no museums, no institutions of learning aside from primary schools and kindergartens—nothing that makes the slightest pretense to culture—civic or otherwise.

Its only restaurants are cafeterias—self-serve tooth and jaw gymnasiums where it is as fashionable to use a toothpick in public as it is to leave the spoon in one's cup. It doesn't boast of a single theater except the cheapest movie playhouses.

There are no evidences of any life—wicked or of the night variety—anywhere within its precincts. If in the daytime more than two people walk abreast on Hollywood or Sunset Boulevards

—broad avenues that lead nowhere—the inhabitants mistake them for a parade. And at night—it is too dark to see anything. In fact, no inmate of this quiet suburb leaves his home after sundown except, perhaps, to buy an evening paper.

Consequently its gay life—its naughty, wicked gay life—is confined to its bungalows. But despite the fact that the attics and basements of these bungalows are on the same floor, this naughty, wicked night life in Hollywood is not on the level.

How did Hollywood get a bad name? you ask.

Principally because one movie actor—an overpaid, overfed comedian who didn't live in Hollywood—was connected with the accidental death of a film actress in San Francisco, and an unsolved murder mystery within its borders focused the attention of the entire country on its gelatin set.

Similar untoward happenings have taken place in other environments, but rarely has an entire community been held up as a horrible example because of them. Hollywood and its movie set are no more to be condemned because Fatty Arbuckle was tried for manslaughter and William Desmond Taylor was mysteriously murdered than the inhabitants of any other city in which sensational crimes have been committed.

The Taylor murder mystery remains an unusually interesting murder mystery. But William Desmond Taylor was not a particularly important member of the local film colony, and there has never been anything to show that his murderer was connected with the movies. My own theory is that he committed suicide rather than remain in Hollywood another fortnight.

Mr. Kitchen here digresses to insist that he holds no brief for Hollywood or its film colony, but having lived in its gelatin set for a month—as well as having made an even longer sojourn three years ago—he feels it is his solemn duty to set forth the

Photo from the United Artists.

TYPICAL HOLLYWOOD INHABITANTS "ON THE JOB."

The chief excitement they may find in the famous celluloid city, says a careful investigator, is getting calluses on their waists by carrying trays in the local cafeterias. The "Horrors of Hollywood," in his candid opinion, are those of any "forlorn suburb" where there is "never anything doing."

Hollywood, declares Mr. Kitchen, by the calluses on his or her waist-line caused by carrying trays in the local "carry-away-your-own" eating-joints. Mr. Kitchen speaks of his stay in the suburb as the length of his "interment," and insists that, because a few of the inmates of the Hollywood film colony have married "from time to time," they are less to be censured as Mormons than pitied as morons. The correspondent spent a week-end in the home of Mary Pickford and Douglas Fairbanks, which he found much like any thoroughly domestic suburban home—except for a complete moving picture projection room where Mary and Doug and their guests spend much of every evening looking at "the pictures." Altogether, Mr. Kitchen's investigations seem to have convinced him that Hollywood is anything but a sink of iniquity. "Right at the outset," he writes in the introduction of his series of articles in the *New York World*—

Let me state that my old friend, Dr. Straton, would not only approve of Hollywood but give it his blessing. For just as an oil-well may be described as a hole in the ground owned by a liar, Hollywood may be described as a collection of bungalows and motion-picture studios written about by liars.

It is an actual fact that more lies have been written about this dreary, desolate suburb of Los Angeles than any other part of California. Only the climate of this alleged "sun-kissed" State has been more misrepresented, to put it mildly, in the public prints. And while I am on the subject of "sun-kissed" California, I want to explain why it is so called. To put it crudely but correctly, it is because the sun long ago kissed it "good-by."

Yes, dear simple-minded readers, to any one who really

In every man's mind there is the hope that at some stage of his career he will own a Cadillac.

He may declare that ambition to his intimates, or cherish it silently in his thoughts, but in either case it remains a strong and inspiring influence.

He ardently desires a Cadillac because he knows it is conceded the world over to be the acme of motor car perfection and enjoyment.

But his regard for the car goes deeper even than that. Acquiring his Cadillac is to be a signal event, a milestone in his affairs. He contemplates the Cadillac as a

possession that will reflect his own tastes and standards, be the outward sign of his success and position in life.

He looks forward to its ownership as a form of self-expression, whereby, in the last analysis, he may reveal his innate human love of fine and beautiful things.

In this practically universal admiration and aspiration for the Cadillac there is involved a responsibility which might well cause any manufacturer serious reflection.

We pledge ourselves to uphold rigidly the standards of the Cadillac, that it may be always worthy of the tribute paid it by these future Cadillac owners.

CADILLAC MOTOR CAR COMPANY, DETROIT, MICHIGAN
Division of General Motors Corporation

C A D I L L A C

Standard of the World

real facts about "this home of hokum." He proceeds with the duty as follows:

Because many of its male gelatin set wear little black mustaches and golf pants, there is no occasion to refer to them as "The Horrors of Hollywood."

I have seen movie actors dressed as Bishops and Cardinals eating ham sandwiches on Fridays. I have visited movie queens who spent weeks trying to locate their maternal parents in order to be photographed with them to "show the world" that their home life was above suspicion. I even attended a church wedding at which "Come Back to Erin" was played by the organist instead of the march from "Lohengrin."

But these happenings, individually or collectively, should not cause the public prints to refer to the inmates of Hollywood as murderers, hop fiends or libertines.

The truth is that Hollywood is as dull as the proverbial ditch

Not to visit Armstrong & Carlton's is to miss the best that Hollywood has to offer. For part of its cafeteria is equipped with tables to which waitresses will actually bring your luncheon!

Here the elite of the gelatin set lunch daily if not exactly gaily. The ameba of the gelatin drama must be in the hash served here, for scenario writers are as much addicted to it as screen screams or ingénues with phony mothers. The only drawback to it is the fact that so many tourists are visiting it that even the highest priced film stars are often unable to find seats.

The sightseeing automobile companies of Los Angeles have capitalized the alleged scandals of Hollywood to the limit. They run huge motor buses to the graveyard where Taylor is buried and "luncheon at Armstrong & Carlton's" is one of the features of the trip. The yaps who make the excursion naturally expect to see gun-play. One of the sightseers told me he wanted his money back because there wasn't a single murder committed during the entire trip.

I lunched at Armstrong & Carlton's twice without seeing anything more devilish than an assistant director order a second cup of coffee. The third time I went there it was so crowded with tourists and sightseers that I had to join my movie friends at "Frank's"—a cheap restaurant across the street.

"I'm going back on the stage next season. They wanted to cut my salary \$500 a week and I wouldn't stand for it."

If I heard this once I heard it a hundred times during my enforced sojourn among the movie makers. It is the "set" speech of nearly every actor and actress "between pictures"—even if their last picture was "The Birth of a Nation."

But when you read that Miss Maybelle Meringue or Handsome Harry Huckleberry has decided to give up the deaf and dumb drama and return to their first love—the stage—you may be pretty sure that their contracts have expired and that neither Abie Wogglebaum nor Leo Pratheimer wants to renew them. All the theaters on Broadway, if they functioned 24 hours a day, 365 days a year, could not provide standing-room, let alone employment, for the actors and actresses of Hollywood who are returning to the stage next season.

And the reason is very simple—

Hollywood as a motion-picture community has seen its best days. This doesn't mean that its studios will be abandoned and the industry transferred to the East, but it does mean that the days of big salaries, wholesale productions and reckless expenditures are over.

Little by little the industry in Hollywood is being put on a safe if not exactly a sane basis. Authors are no longer paid fabulous prices for the screen rights to their books and plays. Actors are no longer put under long-time contracts and paid whether they work or loaf. In fact, economy is the watchword all along the gelatin line.

There is still much to be accomplished. Too many "relatives" are on the payrolls, and directors are still more expert in thinking up new ways to waste time than in devising new business. There are still too many people in the picture business in Hollywood who ought to be in the garment trades. But there is a noticeable improvement over conditions as the writer found them three years ago.

The fact that less than one-third of the studios are functioning at the present time is not the least improvement. Not only have too many pictures been made of late, but most of them have been decidedly mediocre—to speak mildly. The few intelligent actors and directors out here realize this. It is the real reason for the slump in attendance at movie playhouses all over the country. The worth-while pictures have invariably played to good business, and that is why the "best minds" in Hollywood are endeavoring to make "fewer and better pictures."

So the shutdown has been a good thing for the industry—despite the hardship it has worked on many untalented stars

Photo from the United Artists.

POSITIVELY THE LARGEST "SET" EVER MADE IN THE HISTORY OF THE WORLD.

This phrase has been used often before, but this time, it is authoritatively announced, there is no doubt of its truth. The picture shows part of the Norman castle sets under construction at the Fairbanks-Pickford studios, where "Doug" is making a multi-reel celluloid of "Robin Hood."

water. Most of the studios are closed or running on part-time. Salaries have been cut in fractions. Extras—even men with beards who could play millionaires and professors—who used to receive \$10 and \$12 a day are now glad to get \$3.50 and \$4—less, in fact, than a day laborer's wage. Actors are engaged only for each separate picture and at salaries they would have spurned a year ago, with the result that the majority of the members of the film colony are "between pictures," "at liberty" as it is called out here.

The film colony out here hasn't any money to spend in riotous living, even if there were any place to spend it.

As Charlie Chaplin told me, if there was any vice in Hollywood, he'd have a piece of it. He has to go to bed at ten or eleven o'clock every night, like everybody else out here, because there is no place else to go.

"I played a game of dominoes last night and I feel terrible guilty," Charlie confessed to me one morning. "Do you suppose Dr. Straton will roast me to his congregation next Sunday?"

It must be admitted that one can motor to Santa Monica, some fifteen miles away, and dance at Sunset Inn—the alleged center of the alleged gay life in that windswept community. And the white-front restaurants in Los Angeles are open until midnight. But in Hollywood there is nothing but darkness and gloom. That is why the stories about the "gay doings" in this forlorn suburb are too absurd for words.

"Come with me," invites Mr. Kitchen, "to Armstrong & Carlton's—center of Hollywood's mad life at noontime." For—

Tire Competition ~ Good, Bad and Indifferent

HE average American was raised on the idea that the more people who competed for his trade the better off he was.

Like many good ideas, it has several sides.

They all show themselves clearly in the tire business.

* * *

There are tires which prefer to compete largely on a *price basis*. Believing that the public is more interested in the dollars and cents they pay than in the worth of what they get.

On the other hand, U. S. Royal Cords believe differently.

And car-owners who use Royal Cords have a *plus* feeling which they get both from actual experience, and because they realize the *integrity of the manufacturer*.

People don't think of Royal Cords as high-priced tires. They think of them as *better tires*.

In the man who knows what a

good, faithful product the Royal Cord is, the tire that makes price its main argument hardly arouses more than a little curiosity.

* * *

So which is better?

A tire that thinks a man has no judgment beyond his pocket-book?

Or a tire like the U. S. Royal Cord—which credits the public with the instinct for quality, and the sense to find out true economy?

Prices on United States Passenger Car Tires and Tubes, effective May 8th, are not subject to war-tax, the war-tax having been included.

and loud-mouthed directors. The picture business must be deflated—it still needs many drastic economies—a good house-cleaning at the top as well as at the bottom. There are too many illiterate aliens in control of the big companies. When they are weeded out by bad business and replaced by intelligent, well-trained men, there will be still fewer and much better pictures.

Will Hollywood remain on the map?

As long as Mary Pickford, Douglas Fairbanks and Charlie Chaplin live and work there, it will. Up to the present time there are no indications that they will desert California. But the facts that interior lighting is being more and more used in making pictures, that the "locations," around Los Angeles have been used so many times that they are stale, and that the changed climate is making outdoor work in the winter time impossible, must be taken into consideration.

Hollywood is not yet threatened with the sack, but it wouldn't surprise me to wake up some fine morning in the not too dim and distant future and read that nearly all the big companies would make their pictures in and about New York.

course was served Doug got up to start the phonograph, and he left the table again when the dessert arrived to find a box of vintage cigars.

Despite the spaciousness of the dining-room, with its beamed ceiling, rich rugs and massive furniture, the atmosphere of the dinner was decidedly intimate and homelike. Shop talk was dropped when we left the studio, and the conversation, which was general, never once turned to the gelatine side of their existence. Mary, in a simple semi-evening frock which she had hastily donned on our arrival, discussed her shopping expedition to Los Angeles which she had made that morning, while Douglas argued with Frank Case, a New York hotel proprietor and brother Lamb, on merits of the plan for making the Grand Canyon a national receptacle for safety-razor blades that have outlived their usefulness. In short, the meal was like any one of a thousand others served in well-appointed American homes. No one ventured any particularly witty remark, but that did not prevent every one from laughing at the banalities that were uttered. And as every one had an appetite, the dinner was an unquestioned success.

As the guest of honor I was seated at Mary's right, and we had quite a little heart-to-heart talk on the subject of marriage—strictly between ourselves. She confided to me that in the two years or more that she had been married to Douglas Fairbanks, she had dined only three times without him.

"And on two of those occasions Douglas joined me shortly after dinner," she added proudly.

From the admiring glance she gave her actor-husband as she made this confession, it was obvious that their two years of married life have not spoiled their romance. If Mary Pickford is not head over heels in love with Douglas Fairbanks, then she is a far greater actress off the screen than she is on it. I have observed many young married couples, but I have never seen such unmistakable devotion as this famous married pair lavish on each other. They literally hang on each other's words—even the most trivial matters are referred to each other's opinions. In fact, they still act as tho they were on their honeymoon.

When Douglas, as Mary always calls him, returned to the table with

the cigars, which he had the butler pass around with all the dignity due a 1908 Havana, the movies were mentioned for the first time.

"There were only two boxes of these cigars in the humidor of a big New York importing house," explained Fairbanks. "And it was only because 'The Three Musketeers' was the favorite book of the proprietor that he consented to part with one of them. Knowing my love for the character of d'Artagnan, he made me a present of the entire box."

"I don't see how any one can smoke them—they're so long and black," said Mary. And I believe Doug would have endeavored to justify his fondness for the rare weeds if the butler had not asked our hostess whether he should serve coffee in the drawing-room or at the table.

"We'll have coffee in the other room and see the pictures," said Mary simply. And, suiting the action to the word, we moved into the huge living-room, which had been transformed into a private picture theater for the occasion. A full-size screen covered the middle of the wall at one end of the room, while the couches and easy chairs were arranged in two rows at the other end. On the steps leading to this improvised playhouse were other chairs, and what I had supposed to be a blank wall covered with tapestry was a full-size projection box. In short, here was a complete motion-picture theater, and while the coffee was served Mary explained that every evening after dinner they had a show.

"What's the program to-night, Chevalier?" Doug asked the operator, who handed him a printed slip on which were the names of a feature film, a comedy picture, together with the latest news reels and educational pictures.

"Let's have the news reels first," said Mary, and a moment later—we had hardly taken our seats—the big room was plunged into darkness and pictures of various events from all over the world were thrown on the screen. Doug, Frank Case and I smoked in silence—out of respect to the 1908 Havanas—while

WHERE "DOUG" AND "MARY" LEAD THEIR PLACID LIVES.

One room in their suburban Hollywood residence is equipped as a cozy and complete movie theater, and there the two screen stars, we are assured, enjoy a complete picture program every evening when they are at home—where they are said to be about seven evenings of every week. Their lives are described as models of suburban domesticity.

Three years ago, when the motion-picture industry was at the height of its prosperity, Hollywood was dull enough. There was nothing to spend money on, even when the film colony had money. To-day, with the studios turning out one-third as many pictures and with salaries one-third of what they were, it is the dreariest, most desolate place imaginable.

In short, the Hollywood of fiction does not exist. Its gaiety and wickedness are about as spontaneous as the winter sunshine in Southern California.

So, suffice it to say that Hollywood is simply a state of mind. I know its faults and its virtues and I sympathize with both.

It was with the virtues of Hollywood, presumably, that Mr. Kitchen went to sympathize when he spent a week-end at the home of "Mary" and "Doug." Both of them, of course, have been divorced and remarried, but Mr. Kitchen is far from including either in his Mormonical or moronical categories. He writes, in a chatty way:

We sat down, six at the table—Mary at the head of the festive board, with Douglas on her left; Mr. and Mrs. Frank Case, "the gentleman with the typewriter" and his accompanist.

It was Saturday night at the Beverly Hills home of Mr. and Mrs. Douglas Fairbanks, where we had arrived to spend the week-end with the famous film stars. But it was in no sense a festive occasion. In fact, it was after seven o'clock before all of us left the studio, and no one was dressed. We didn't even begin the meal with a cocktail, for while the Fairbanks-Pickford ménage is perfectly appointed in every respect, cocktails are rarely served. Doug insists that even the rarest champagne tastes like citrate of magnesia—so, what's the use?

There was a printed menu of the dinner in front of Mary's plate and the meal was perfectly served by a French butler and a second man; but its formality ended there. Before the first

QUALITY IS AT THE PEAK PRICES ARE AT BEDROCK

Year after year the quality of Goodyear Tires has been going up and up.

Veteran users say Goodyear Tires today give more than twice the mileage they did ten years ago.

In the meantime, there has been no slackening in our effort to push Goodyear prices down.

Today these prices are at bedrock—the lowest they have ever been.

Look at the figures listed below.

They represent an average decrease in Goodyear prices since 1910 of more than 60 per cent.

Remember—Goodyear quality is at its peak.

These prices, divided by your speedometer reading, tell the story.

Now is the time to buy.

the ladies kept a tray of luscious chocolates in circulation.

Certainly it was an ideal way to see motion pictures—sunk deep in a huge easy-chair, after a perfect dinner (minus the cocktail) and with a long black Havana of a vintage year.

When the reel was finished and the lights were turned on, half a dozen other people had appeared in chairs on the steps behind the small, select audience. Mr. Kitchen relates:

"They're our servants," Mary informed me. "We always have them come in after dinner to watch the pictures."

"And you mean to say that every night you have a picture show?" I asked, for the idea of witnessing a movie performance every night in the week seemed too much of a good thing.

"Every night," answered Doug, who had made himself comfortable on the couch beside his wife. "You see we hardly ever go into Los Angeles. It's no pleasure going to the theaters there because of the crowds and, besides, we have all the new pictures sent up here where we can enjoy them in comfort. Would you believe it?" he went on, "that I've never been to any of the places in Hollywood and Los Angeles that the newspapers write about? Why, Mary and I have only been to the Ambassador Hotel once since it was built. We spend practically all our evenings at home. And we're usually in bed at 11 o'clock."

The darkening of the room for the next picture—a travel film—put an end to the conversation for a moment.

"Travel pictures are the best part of a movie show as far as I am concerned," I said, forgetting for the moment that I was the guest of the two most famous stars of the feature films.

"That's what I enjoy most, too," agreed Mary, adding, "but Douglas likes comedy pictures."

Following another brief interval, during which more bonbons were passed around, a comedy picture was shown. But it was the unfunniest of alleged funny pictures and we all breathed a sigh of relief when the star feature of the evening, a new Goldwyn picture, was begun. However, it turned out to be even stupider and duller than the alleged comedy, and in the midst of one of its most tragic scenes Mary nudged me to look at her husband. He was sound asleep on the couch, snoring rhythmically, if not exactly musically.

"I think we've had enough, Chevalier," Mary called to the operator, and when the lights were switched on Doug awoke with a start.

"Pardon me," he said. "I must have been dreaming."

"Snoring, you mean," corrected Mary. "But I don't blame you, Douglas. It was an awful picture."

"That's why the picture business has been so bad of late—the pictures have been too awful for words," interrupted Frank Case. "Isn't it past bedtime?" he added, changing the conversation without warning.

"It's after eleven," replied Doug. "We keep early hours here," he explained for my benefit, passing me an apple.

"How'd you like a glass of fresh laid milk?" he asked as we said the usual "good-nights." "I'm sorry I haven't any Scotch to offer you."

It was not surprising that every one slept late. Mary and Doug had put in a strenuous week on their new pictures. And I had long since resigned myself to the fact that for a New Yorker there is nothing else to do in Southern California but sleep. So it was nearly ten o'clock when I emerged into the bright sunshine—the one sunshiny day in a month's stay—to explore the grounds of their Beverly Hills estate.

As I walked over to the swimming-pool, a few hundred feet from the house, I heard a whistle from an upstairs window, and a few moments later, redolent of tooth paste and freshly talcumed, Doug joined me on the lawn.

"Isn't it wonderful out here in the hills?" he asked. "Look over there, you can see the Pacific Ocean. This is the only place to really live," he went on, taking deep breaths and apostrophizing the sun. And for a moment I shared his enthusiasm, but the announcement that breakfast was ready turned my attention to more important things.

Doug and I began our meal alone in the sunny breakfast-room, but before we had two helpings of cakes, Frank Case joined us and when we were ready to eat a third breakfast, Mary looked in on us.

It was a jolly breakfast party—that is, if any morning meal can be described as jolly. We talked of everything from seedless oranges to the horrors of Hollywood, and after discussing what would be the most amusing way to spend the day, we decided to omit luncheon and motor over to the studio.

"Charlie'll be over to-night and we'll have some laughs," Doug announced, as he called for the car. "Do you want to go over to the studio with me?" he asked Mary, who merely answered that she would be ready in a minute.

And so we all bundled off for the Fairbanks-Pickford studio

in Hollywood to see if everything was as we had left it the night before.

When it is explained that Mary is building a bungalow on the "lot" and Doug is having a Turkish bath constructed on his athletic field—in addition to their respective "sets"—their anxiety to visit their studio on Sunday may be understood. And it was surprising how much activity we encountered there. When a studio is in the throes of picture-making—especially a big picture like the next Fairbanks superb movie—Sunday is almost like any other day. In fact, it was almost seven o'clock before we were back at Beverly Hills for dinner. Charlie Chaplin had joined us at the studio and he returned with us to spend a quiet evening with Mary and Doug.

Our dinner Sunday evening was a little livelier than the night before, for Charlie loves to talk and he monopolized most of the conversation. Doug and Mary didn't agree with him on anything, but that only made it more interesting.

"Charlie, you're a 'nut,'" Mary repeated after each oratorical outburst on the part of the famous comedian. At which Charlie would make a funny face that would set us all in roars of laughter.

Before the inevitable picture show Charlie suggested that we have five-minute speeches on subjects selected at random from a hat—the favorite indoor sport of this famous film trio. We all wrote subjects on slips of paper which we dropt in one of Doug's derbies and which we drew out later after they had been thoroughly mixed up. As luck would have it Charlie drew the slip on which I had written the word "warts," and he stood up and for five minutes made a brilliant after-dinner speech on that important subject.

"Charlie can talk on any subject," Mary explained to me, for I was again on her right. "The other evening he made a speech on Socialism to our five dogs and he kept right on talking for three hours, altho three of the animals walked out on him."

It would have been more enjoyable to have remained at the dinner-table, but the picture show was announced and before we finished our coffee it was under way.

I am unable to describe it very fully, as I went to sleep, and shortly before eleven o'clock when Charlie took his departure, he admitted that he had slept through most of the program.

HOW AMERICANS ARE PAYING THE GERMAN INDEMNITY

AN AMERICAN WAS THE VICTIM of a big hotel robbery in Berlin, about the middle of May, and the German papers made a great to-do about it. But the story suggested to an American newspaper correspondent that little attention was being paid to the continual robbing of American visitors, through the less picturesque but no less thorough methods in use by the German Government, various German municipalities, German shopkeepers and hotel-managers. So competently is this business of soak-the-American organized that, suggests the *New York Times*, the Germans may be planning to pay their indemnity, *in toto*, from the proceeds of squeezed Yankees. As a starter, every American entering Germany is required to deposit 1,000 marks with the Government. "It is politely called a deposit," said an official of the American Express Company, who is the authority for the news of this recent German custom. "But it is a deposit for keeps. On some pretext or other, it remains in Germany." After this introduction into the country, the American visitor, says Cyril Brown in the *New York Times*, is doubly or quadruply charged for everything, up to the point of "all the traffic will bear." According to Mr. Brown:

How to milk the "*valutastrong Amerikaners*" is engaging not only the National Government but the Governments of federated German Republics as well as municipalities. Bavarians have temporarily solved the problem by trying to charge Americans and other "*valutastrong*" outlanders two or three times what a German pays. In the Prussian Parliament, when it reassembles, a proposal will come up to charge foreign visitors to Prussia a visitor's tax, to be fixed in gold marks and collected at the pre-war rate of exchange. The tentatively proposed charge is four gold marks per diem. Visitors, therefore, are to be charged \$1 daily for the privilege of spending their other dollars in Prussia.

At the same time acutely sharpened control of foreigners in Germany, particularly Berlin, has set in. Americans as well as others who look unlike Germans are from now on subject to being stopped by the police in streets, restaurants and other public places as well as being investigated in hotel bedrooms

Summer-Winter Town-Country Big House-Little House

IN THE LITTLE COTTAGE nestling under a friendly elm and in the proud mansion on the avenue, the New Perfection Oil Cook Stove does three-times-a-day service in preparing meals properly and on the minute.

The New Perfection has no "off hours"—it always provides a steady heat for cooking—fast or slow. The chef in the palatial town house has no heat-control advantage over the housewife in the farm-house,

if she has a New Perfection Oil Cook Stove.

There is a New Perfection model for every home—from the lordly 5-burner No. 35 down to the single burner, which can be stowed away with the portable phonograph for camping days. There are generous cabinets and ovens to assemble the kind of cooking equipment you favor. And Aladdin Utensils in aluminum and enameled steel to give you a kitchen de luxe.

OIL COOK STOVES & RANGES

Saving One and a Half Billion Dollars A Year

MAZDA SERVICE, established in the Research Laboratories of the General Electric Company, is dedicated to the task of advancing the art of electric lighting.

Because of the discoveries made in these laboratories, *the country as a whole receives over three times as much light for the same money as it did when these laboratories were established, less than twenty years ago.*

The lamps of that period had filaments of carbon. The lamps of today have filaments of drawn tungsten—filaments made by methods discovered in the Research Laboratories.

If the light required today were produced by the carbon filaments of yesterday, *the people of the United States would have to pay for current one and a half billion dollars a year more (over \$4,000,000 a day) than they actually pay now.*

The improvements and discoveries worked out in the Research Laboratories of the General Electric Company, which make such great economies possible, become available to authorized manufacturers through MAZDA SERVICE.

RESEARCH GLEAMS

Gleam 2

One and a half billion dollars a year is greatly in excess of the total passenger receipts of all the railways in the United States in 1921. Such is the saving in light bills made possible by two decades of Research by MAZDA SERVICE.

PERSONAL GLIMPSES Continued

by the "Fremden Polizei," specialized watchers of foreigners. It looks as if Germany is trying to kill the tourist goose that lays the golden eggs.

The policy of the German Government, German shopkeepers and German hotel-keepers, according to a special dispatch to the *Chicago Tribune*, "is based on the idea of making foreigners, especially Americans, pay the German reparation." As for the basis for such a belief, says the correspondent:

This is the statement, not only of numerous Americans who are thronging *The Tribune's* Berlin Bureau with protests, but it has been confirmed by many American diplomatic and Consular representatives, who have frequently informed the State Department at Washington and asked intervention.

To-day there appeared on the bulletin board of the American Consulate-General in Berlin, as well as in all American official buildings throughout Germany, an official warning to Americans telling them not to make purchases in Germany on account of the German system of holding up Americans in Bremen and Hamburg, as well as at inland frontiers, taking the goods from them and fining them heavily.

This is done under the German law demanding from 50 to 200 per cent. taxes, payable to the Government on all articles for export.

Throughout Germany the consular offices are piled with protests from Americans, claiming that the shopkeepers informed them it was not necessary to pay the export tax, whereas the customs officials confiscated their cameras, opera-glasses, clothes, baggage and valuables. The consular warning reads:

"Numerous complaints have been received that goods purchased in Germany by Americans have been frequently confiscated at the borders, and in addition heavy fines imposed. In one instance an American was fined \$25 for attempting to take out opera-glasses costing \$5. The consulate has taken up these cases with the German authorities, who inform it there is no redress.

"Therefore it appears it is advisable for Americans not to purchase goods in Germany for export. It is impossible to rely on the word of the German shopkeepers, who state that the merchandise can be exported, inasmuch as it has been found that in every case reported to the Consulate the shopkeeper informed the purchaser that the export prohibition was non-existent.

"If, however, Americans desire to purchase articles in Germany, it is advisable to obtain an export license by paying from 50 to 200 per cent. upon the cost of the article."

The Germans are blaming the Allies, principally the French, says a later dispatch to the *Chicago Tribune*, for the extortionate charges and tripled prices. *The Tribune* correspondent cables:

Joseph Strauss, Treasurer of the Columbian Colortype Company of Chicago, who has just returned from Berlin, Munich and Leipzig, said to-day:

"I congratulate *The Tribune* for its

exposure of German discrimination against Americans. The Munich police made me pay 1,125 marks for two days' permission to remain in the city. The hotel-keeper deliberately tripled my bill, and the shop-keepers doubled and tripled the prices of every article I examined. Even the banks, when I changed dollars, tried to reduce the exchange rates, necessitating my visiting several and then getting a German friend to transact the deal.

"When I asked why Americans are robbed, the Germans explained, first, because the dollar was worth so much, and, second, that they are obliged to do so because the French, through the Reparations Commission, have taxed German exports 26 per cent. When I asked what the export tax was connected with in Munich, I was answered by a shrug of the shoulders.

"Everywhere the Germans are sullen and awaiting a propitious moment to make an attack on France. The Germans speak openly of *Der Tag* as the naval officers did regarding the British fleet before the war.

"The British and Belgians, I found, are uneasy through the realization that another German onslaught is inevitable.

"The Germans will not pay the reparations, but every one has money. I went to the racetrack at Leipzig and found every one betting so freely that I could not get my money down to make a wager. The Germans eat enormous and expensive meals, and sit in the cafés drinking beer all day long and then say they can not pay damages to France."

With a certain amount of amusement, the New York *Times* comments editorially upon the fact that German-Americans are being fleeced by the Germans quite as thoroughly as unhyphenated Americans. *The Times* dissertates under the heading of "Recovering the Indemnity":

There was a hot time in Hamburg when a German liner brought in a thousand German-Americans who hadn't seen the old country for some years. Two hundred thousand Hamburgers met the boat, singing "*Deutschland Ueber Alles*," waving the black-white-red of the more or less defunct empire, and remarking cheerily that "Blood is thicker than water." Doubtless it is, but one may wonder whether the tourists are brought back to the Fatherland by the call of the blood or the lure of the beer.

Unless they have better luck than most Americans in Germany they will soon be disillusioned. The flag-wavers and blood-thickeners, if they are like most other Germans, will proceed to collect from the returning German-Americans as much of the German indemnity as the homecomers happen to have in their pockets. So it goes all over Germany. The foreigner is being not only exploited but penalized. All sorts of special taxes are devised to equalize the difference between the mark and the dollar. Hotel and store prices for Americans are two or three times the amounts charged to Germans. Articles are sold on the solemn pledge of the salesman that there is no export tax, and when the departing American reaches the frontier he finds that he has to pay two or three times the value of his purchases as duty.

This is a brilliant example of German stupidity, but to regard it as a new German atrocity seems absurd. The Germans are doing what most European peoples are doing—only they are doing it several

\$35,500,000 for New Equipment

IT is the well-known policy of the New York Central Lines to provide as large a reserve of cars and locomotives as can be safely carried through periods of light traffic.

The New York Central Lines have earned a reputation for being forehanded in providing equipment. Two years ago, when Government operation of the railroads terminated, the New York Central Lines placed orders for 206 locomotives, 265 passenger cars and 9,244 freight cars, involving an expenditure of \$48,776,000.

The 1922 equipment order calls for 17,500 freight cars and 75 locomotives, entailing an expenditure of \$35,500,000.

This heavy investment in equipment must be made by a railroad system of the magnitude of the New York Central Lines, in order that it may have an equipment reserve to draw upon when traffic rapidly rises with the tide of business recovery.

Jim Henry's Column

A Digression

I have a one-product mind. I shall always consider that the purpose for which I was produced was to show men how to enjoy shaving by doing it right with Mennen Shaving Cream.

So it is with reluctance that I occasionally capitalize on the confidence which millions of converts must feel regarding anything I tell them, by discussing other products.

It is a peculiar fact that only recently has science concerned itself with bodily comfort. Our internal mechanism has always appealed to science as an attractive field for experimentation and research but things like itching, raw skin, prickly heat and baby rashes have not ranked as laboratory head liners.

Now my company has always specialized on comfort. It gave Talcum to the world. It freed men from old-fashioned shaving soap. But I am inclined to believe that history will record as Mennen's greatest contribution to the comfort of living, our miraculous Kora-Konia.

Kora-Konia is one of those things you have to find out about for yourself. I can tell you that it's great for sunburn, but you will never appreciate what I mean until you see the angry redness change to healthy pink and the pain subsides.

I can assure you that it saves you from the torture of skin rubbed raw by damp clothing or chafing muscles, but you must shoot eighteen holes without a suggestion of irritation before you will understand.

But Kora-Konia reaches its pinnacle of beneficence on babies. A baby with plenty of food inside and plenty of Kora-Konia outside is at peace.

I feel some diffidence in discussing the matter, but through no fault of its own, a baby's skin is exposed to conditions which can only be described as deplorable. Kora-Konia places on inflamed little legs and other areas, a velvety film of cooling, soothing powder which clings for hours, protecting while it heals.

Kora-Konia is amazingly efficient for prickly heat and baby rashes.

A big tin costs 35 cents at druggists. Send 10 cents for a generous sample.

times harder. The confidence that in the course of time the American tourist can be made to pay the whole cost of the war is pretty general, at least in Western Europe, and within certain limits the desire to get even with the man whose money is worth more than your own is natural enough. But who are the victims of this process in Germany? The majority are well-to-do German-Americans, cherishing a lingering sentimental attachment for the old country. It may open their eyes to find that the old country regards them chiefly as sheep fit for the shearing. The Kaiser's Government was interested in the German-Americans only for what it could get out of them; apparently, Germany under the republic has the same point of view.

Aside from these sentimentalists, however, another class of Americans suffers more from German extortionate prices. Germany is full of American business men who think they can do certain things that will be profitable to Germany as well as to America. If they are driven out, disgusted, Germany will be hurt more than America. And as for the mere tourist, he will come from Paris, where he thinks he was robbed outrageously, to Berlin, and discover that French shopkeepers are mere amateurs in spoliation. What good the Germans think they will derive from creating this state of mind in American travelers, only a German psychologist can imagine.

Additional surprising reports of overcharging in Germany come through in later dispatches to the *Tribune* and *Times*. A "tourists' strike" is reported from Berlin. According to the dispatch, dated Berlin, May 22, as published in *The Tribune*:

A party of American women turned the tables on the Bavarian Government by conducting probably the first tourists' strike in history, in retaliation for one of the many instances of overcharging so prevalent now throughout Germany. These women, tho 5,000 miles from home, were courageous enough in their strike to even do picket duty against a German institution.

Near Oberammergau there is the Schloss Linderhof, in which lived the mad King Ludwig II. It is of interest to tourists, and on the day the Passion Play opened the Bavarian Government notified the guards of Castle Linderhof to fleece American sightseers. Altho printed signs say the price of admission is 25 marks, Americans were charged 150 marks (about 50 cents). Of course the Americans were not informed, and after paying 600 marks (about \$2) for a carriage, many of them submitted.

But along came a party of five wives of American diplomatic officials in Berlin and Munich. They saw the sign and argued for "list prices." The guards refused.

"We won't go in," said the Americans. "You will change your mind," answered the guards.

But they did not. Headed by Mrs. Theodore Hogg, wife of the American Consul in Berlin, and Mrs. Smith, wife of a captain of the United States Military Mission, they took a position in a neighboring teahouse and outlined a campaign. A few

minutes later a party of ten Americans appeared whom the guards tried to fleece. Immediately the American pickets appeared and called attention to the extortion, whereupon the ten Americans joined the five pickets. All afternoon groups of two to ten Americans appeared, and almost without exception refused to pay the 150 marks, but joined the strikers until the teahouse was full.

In desperation the Bavarian Guards attacked the teahouse-keeper, demanding that 150 marks be added to every bill because they had lost that much in patronage. But it did not work. Linderhof remained deserted and the Americans returned to Oberammergau, happy despite not seeing Ludwig's madhouse, and Bavarian officialdom continues to gnash its teeth over the first American boycott.

Hotel robberies in German cities, both real robberies and "robberies" of the overcharging sort, continue to thrive, says the same paper. It cites as an instance that:

Milton J. Rosenberg, manager of the Miller & Co. brokerage office at 212 Fifth Avenue, yesterday told of the robbery of his daughter and son-in-law, Mr. and Mrs. L. C. Hirsch, at the Park Hotel in Mannheim, on April 27. Mr. Hirsch is head of L. C. Hirsch & Co., metals, of the Bush Terminal, Brooklyn.

"They had had dinner with Mr. Hirsch's parents in honor of his father's seventieth birthday," said Mr. Rosenberg. "Returning to the hotel, my son-in-law laid his dress-studs, cuff-links, watch and chain, &c., on the dresser, together with \$207 in American money, 1,600 francs, several thousand marks and check books of the American Express Company and the Lincoln Trust Company. "In the morning everything had disappeared, and there was evidence that a thief had entered the room from a balcony. My daughter's jewelry was on top of the same dresser, but was not taken. She had happened to put her hat over the jewelry."

Mr. Rosenberg said that his information bore out the charges that German merchants had two sets of prices—one for Germans and another for American travelers—and that the latter were unmercifully "stung" in living expenses.

The treatment accorded Americans in Germany was described yesterday by Harry R. Dreyfus, of 131 West 110th Street, who said:

"I have spent three months in Germany and was robbed of my money there, causing me great inconvenience for a week before money was cabled from home. At the Holland-German border the customs officials confiscated all personal gifts and samples of merchandise with which I had hoped to do business.

"They even confiscated my tooth-paste because it was a new tube. I offered to pay at the Custom House whatever export tax was necessary, but was told I would have to return to Berlin. As I had already booked my passage, the boat leaving the next day, it was impossible to get the 'Ausfurbewilligung' (export license). They refused to allow me to continue on the Holland train until the officer in charge released me. As a result I arrived in Rotterdam almost too late to catch my boat.

"I was charged at the hotels in Berlin three times the amount the natives paid. They recognize Americans by their pointed shoes."

UNRULY McCONNACHIE, BARRIE'S
OTHER SELF

SIR JAMES M. BARRIE has a double personality, on his own confession, and he has had a hard time keeping the two parts of it from fighting with each other. His second self, his "writing half," is a person by the name of McConnachie. This is the chap who really wrote the plays, says Sir James, and not the Barrie known to the world in general. McConnachie, we are informed in the author's best manner, is a fanciful, odd sort of person, likely to do most anything, while Barrie himself is a serious-minded man, ready to bow to all conventions. This revelation came in the course of Sir James's installation as Rector of the University of St. Andrews, when he delivered "a rectorial address," says the *London Times*, "the like of which can never before have been heard by any body of students." "Courage" was the subject. Some of the pith of Sir James's address was given in cable dispatches quoted in *THE DIGEST* of May 20, in the Department of "Letters and Arts." He advocated a "League of Youth"—and Courage. That part of Barrie's address which contains the whimsical reference to McConnachie, and in which also is unfolded an inspiring part of his theme—Courage—is given as follows by the *New York Times*:

"No one could be more conscious of the honor you have done me," he said. "You have had many rectors here who will shine on after the likes of myself are dead and rotten and forgotten. They are the roses in December. You remember that some one said that God gave us memory so that we might have roses in December. But I don't envy the great ones. In my experience, and you may find in the end it is yours also, the people I have cared for most and who have seemed most worth caring for—my December roses—have been very simple folk. But I wish that for this hour I could swell into some one of importance, so as to do you credit. . . .

"My special difficulty is that tho you have had literary rectors here before, they were the big guns, the historians, the philosophers; you have had none, I think, who followed my more humble branch, which may be described as playing hide-and-seek with angels. My puppets seem more real to me than myself. I could get on much more swingingly if I made one of them deliver this address. It is McConnachie who has brought me to this pass. McConnachie, I should explain, is the name I give to the unruly half of myself—the writing half. We are complement and supplement. I am the half that is dour and practical and canny, he is the fanciful half; my desire is to be the family solicitor, standing firm on my hearthrug among the harsh realities of the office furniture, while he prefers to fly around on one wing. I shouldn't mind him doing that, but he drags me with him. I have sworn that McConnachie shall not interfere with this address to-day. But there is no telling. I might have done things worth while if it had not been for McConnachie. My first piece of advice to you at any rate shall be sound. Don't copy me. A good subject for a rectorial address would be the mess the rector himself has made of life. I merely cast this forth as a suggestion, and leave the working of it out

The Big Job Calls

For days the directors' choice hung in the balance between two able men. This one was called to bigger things because he had placed the true commercial estimate on health.

It pays to take good care of the teeth.

Thousands have their efficiency lowered and their resistance to disease cut down by their failure to heed the first warnings of Pyorrhea, which afflicts four people out of five who pass the age of forty and many younger.

Are your gums tender? Do they bleed easily when brushed?

Those are the signs of Pyorrhea's presence. If neglected the germs attack the teeth, which loosen, drop out or must be pulled. Pus pockets form and the whole system may pay the penalty of neglect.

If you would prevent Pyorrhea, see your dentist often and heed his advice. Also, start using Forhan's For the Gums today.

Forhan's For the Gums is the formula of R. J. Forhan, D. D. S. If used consistently and used in time, it will prevent Pyorrhea or check its course. An excellent dentifrice, it keeps the teeth white and clean and the gums pink, firm and healthy.

Brush Your Teeth With Forhan's—How to Use It

Use it twice daily, year in and year out. Wet your brush in cold water, place a half-inch of the refreshing, healing paste on it, then brush your teeth up and down. Use a rolling motion to clean the crevices. Brush the grinding and back surfaces of the teeth. Massage your gums with your Forhan coated brush—gently at first until the gums harden, then more vigorously. If the gums are very tender, massage with the finger, instead of the brush. If gum shrinkage has already set in, use Forhan's according to directions, and consult a dentist immediately for special treatment.

35c and 60c, in the U. S. and Canada. At all druggists.

Formula of R. J. Forhan, D. D. S.

to my successor. I don't think it has been used yet.

"My own theme is courage, as you should use it in the great fight that seems to me to be coming between Youth and their Betters; by Youth meaning of course you, and by your Betters us. I want you to take up this position—that Youth have for too long left exclusively in our hands the decisions in national matters that are more vital to them than to us. Things about the next war, for instance, and why the last one ever had a beginning. That the time has arrived for Youth to demand a partnership. That to gain courage is what you come to St. Andrews for. With some alarms and excursions into college life. That is what I propose, but of course the issue lies with McConnachie.

"Your Betters had no share in the immediate cause of the war—we know what nation has that blot to wipe out; but for fifty years or so we heeded not the rumblings of the distant drum—I don't mean by lack of military preparations—and when war did come, we told Youth, who had to get us out of it, tall tales of what it really is and the clover beds it would lead to. We were not meaning to deceive, most of us were as honorable and as ignorant as the Youth themselves, but that does not acquit us of stupidity and jealousy, the two black spots in human nature which, more than love of money, are at the root of all evil.

"You are already disturbing your Betters considerably. I sometimes talk this over with McConnachie, with whom, as you may guess, circumstances compel me to pass a good deal of my time. In our talks we agree that we, your Betters, constantly find you forgetting that we are your Betters. Your answer is that the war and other happenings have shown you that age is not necessarily another name for sapience—that our avoidance of frankness in life and in the arts is often but a cowardly way of shirking unpalatable truths."

This passive attitude of distrust, however, Sir James told his audience, is not worth much. Doubt is good, he declared, if it inspires a desire to get at the truth. He advises:

"Begin by doubting all in high places—except, of course, your professors. But doubt all other professors. If it necessitates your pushing us out of our places, still push; you will find it needs some shoving. But the things courage can do! The things that even incompetency can do if it works with singleness of purpose! Your Betters have done a big thing; we have taken spring out of the year. And having done that our leading people are amazed to find that the other seasons are not conducting themselves as usual. The spring of the year lies buried in the fields of France and elsewhere. By the time the next eruption comes, it may be you who are responsible for it and your sons who are in the lava. All perhaps because this year you let things slide."

As for success or failure in life, said the playwright-rector:

"You will all fall into one of those two callings, the joyous or the uncongenial, and one wishes you into the first, tho our sympathy, our esteem, must go rather to the less fortunate, the braver ones who "turn

their necessity to glorious gain" after they have put away their dreams. To the others will go the easy prize of life—success, which has become a somewhat odious onion nowadays, chiefly because we so often give the name to the wrong thing. When you reach the evening of your days you will, I think, realize—with, I hope, becoming cheerfulness—that we are all failures, at least all the best of us. The greatest Scotsman that ever lived wrote himself down a failure:

The poor inhabitant below
Was quick to learn and wise to know.
And keenly felt the friendly glow
And softer flame.
But thoughtless follies laid him low
And stained his name.

Perhaps the saddest lines in poetry, written by a man who could make things new for the gods themselves.

"If you want to avoid being like Burns there are several possible ways. Thus you might copy us, as we shine forth in our published memoirs, practically without a flaw. No one so obscure nowadays but that he can have a book about him. Happy the land that can produce such subjects for the pen."

The rector held up a few sheets of paper, a last message from Captain Scott, written just before his death in the Antaretic, and said that the explorer's end was an example of courage at its best. He continued:

"Courage is the thing. All goes if courage goes! The greatness of a people is founded on their moral principles; but what says our Johnson of courage: 'Unless a man has that virtue he has no security for preserving any other.' Be not merely courageous, but light-hearted, also gay. Some people have odd ideas of what gaiety is. There is an officer who was the first of our army to land at Gallipoli. He was dropt overboard to light decoys on the shore, so as to deceive the Turks as to where the landing was to be. He pushed a raft containing those in front of him. It was a frosty night, and he was naked and painted black. Firing from the ships was going on all around. - It was a two hours' swim in pitch darkness. He did it, crawled through the scrub to listen to the talk of the enemy, who were so near that he could have shaken hands with them—lit his decoys and swam back. He seems to look on this as a gay affair. He is a V. C. now, and you wouldn't think to look at him that he could ever have presented such a disreputable appearance. Would you! (Colonel Freyberg.)

"Another piece of advice—almost my last. For reasons you may guess I must give this in a low voice. Beware of McConnachie. When I look in a mirror now it is his face I see. I speak with his voice, and you all know now what a voice it is. I once had a voice of my own, but nowadays I hear it only from far away, a melancholy, lonely, lost little pipe. I wanted to be an explorer, but he willed otherwise. You will all have your McConnachie's luring you off the high road. Unless you are constantly on the watch, you will find that he has slowly pushed you out of yourself and taken your place. He has rather done for me. I think in his youth he must somehow have guessed the future and been fleggit by it—flichtered from the nest like a bird—and so our eggs were left, cold. He has clung to me, less from mischief than for companionship. I half like him and his penny whistle. With all his faults he is as Scotch as peat. He whispered to me just now that you elected him, not me, as your rector."

REVIEWS • OF • NEW • BOOKS

MERGING EAST AND WEST

WE meet Lilla when she is still a child. Her parents had both been killed in a railway accident, and she was brought up by an aunt, "a pale, aristocratic, chastely fervid" woman, in an old, fine, rarely furnished house on lower Fifth Avenue. Rooms purely lovely with the art of early America, whose Colonial dignity had been enriched by objects Miss Balbian had acquired in her many travels, objects each with its own exquisiteness, produced an atmosphere in which Lilla grew up "a juvenile epicurean, precocious in esthetic judgment, intolerant of anything that was not exquisite." She inherited from her mother a neurotic temperament, an extreme sensitiveness, while her father, feeble, handsome, absorbed in himself, idle and clever, had little to give her that could strengthen the fiber of her body or cool the ardors of her mind and spirit.

This, then, is the heroine of a book by one of the most sensitive of American novelists, Stephen French Whitman. Under the title of "Sacrifice" (D. Appleton & Co., \$2.00) it is done in a certain mood, and is successful in producing the effect it is after. It is set in an atmosphere of sapping luxury, it moves as tho to the harmonies of languid music, richly hung with gorgeous trappings, poignant with longing for what is not. Here are men and women who know no material drawback to their desires, and who remain unsatisfied and unhappy. The East and the West meet here and love and suffer together. It is like an enchantment produced to the heady, enervating fumes of strange scents and by means of fantastic gestures and woven steps. Colors meet and mingle and change, eyes shine, white arms rise and drop again, immense forests spring up, the sea sounds on lonely shores, palaces appear and disappear.

Lilla grew up, perfect of her type. Men wooed her, but she remained untouched by their importunities. One especially would not be rebuffed, her cousin, Cornelius Rysbroek, "a lean, neat hypochondriac, highly cultivated, with fine instincts and excruciating aversions, bored by his leisure, yet incapable of action, and inconstant in every aspiration except this love of his." She constantly refused him, and after each refusal he would wander on some journey, following the beaten paths because he did not have the energy to do the wild and dramatic things he would threaten to do. And he would return, sallow and sadder, and with his passion still gnawing at his heart.

But Lilla had a dream. She, "fragile and moody, dreamed of physical strength and a triumphant will." And this dream had its reality.

"She kept in her desk a magazine picture of Lawrence Teek, the explorer, whom she had never met, but whose likeness, singular amid innumerable presentments of the human face, had arrested her first glance and fascinated her mind."

He was an author as well as an explorer, and the girl knew his books, which "unrolled before her the esoteric corners of the desert, the strange charm and depravity of Oriental cities, the deadly richness of equatorial forests, peopled by human beasts whose claws were hammered steel, whose fangs were poisoned arrows, and

who carried in their thick skulls the condensed miasma of their hiding places."

And one night, at a gathering in a country house, she meets this dream of hers.

He is to go back to Africa the day but one following. And they walk together in the fragrant night and talk. It is beautiful talk, full of the color and the fantasy Mr. Whitman manages to put into every page of his book. During it Teek tells Lilla that during his travels and his dangers, a picture cut out of a magazine always went with him. He had found it in the Afrika Hotel at Zanzibar, and its peculiar beauty had clutched suddenly at his pulse. Contemplating the picture, the man had "divined the nature of the woman, all her complexities, and even her emotional fragilities. There came to him the well-known conviction, 'It's she that I've always been seeking.'"

Before Teek had arrived that evening there had been a sort of séanee, when a Russian woman of high rank had told, by looking at their slender palms, the fortunes of several of the women. Among the rest she had looked at Lilla's hand. And she had had a vision, grim and terrifying, of a great forest bending darkly over a sort of bier, on which lay a body covered by a black cloth, and surrounded by seated savages.

The next afternoon Lilla and Lawrence are married in a little village, which they have found while motoring. They go to his house in the city for the night, and the day following he departs for Africa, in spite of Lilla's passionate pleadings that he remain, her assertions that she has forebodings of ill, and his own desperate longing to remain by the woman he loves. But his honor is engaged, he must make this journey into the depths of Africa, and he goes. Lilla was to have gone with him to the edge at least of civilization, but just as she is to start, as the taxi waits, there comes a telephone call from her aunt's house. She is dying. And the wife and husband part.

Lilla endures her life with difficulty, harrowed by anxieties for the man she loves. A last letter reaches her, before he plunges into the wilds. One evening, seated in his room, with the relics of his former explorations all about her, she is suddenly brought to her feet. . . . "Her dilated eyes were fixt upon a point in space, from which an overwhelming impression had rushed in upon her—a flood of distant emotion, a sort of voiceless cry, in a flash traveling half the earth and unerringly reaching her."

A month later the papers published accounts of the death of Lawrence Teek in the jungle. His valet, who had always traveled with him, had managed to get out with the news. But it was four months later before she got a letter from this man, with the details, sufficiently simple. Parr himself had been terribly wounded, and had fallen ill of the fever. He had not been able to write before.

The rest of the book is taken up with Lilla's desperate struggles to gain some sort of peace, of relief from misery, to find something to which she may give herself. Rysbroek again besieges her, and always in vain. But she marries, at last, two or three years later, marries a musician, a

helpless invalid with a great genius who is on his death-bed, but who is kept alive and is able to continue his work by his love for her, and by the conviction that she loves him. So she does, but not as a woman loves a man. She loves him for the genius he has, for the fact that she is able to feel that she is not utterly useless, for the sacrifice she makes of her youth and her beauty to his helpless suffering.

There is an East Indian, a Mohammedan, involved in the tale, a man of charm and courage and devotion, a man of beauty and ideals. And in the far forests of Africa a white man, held prisoner by the savages, dreams of the woman who is waiting him, and works strongly and sanely for his freedom.

A QUEER KIND OF SAINT

DOES notoriety make one a personage? Judging by the experience of a recent British visitor to our shores perhaps not, but Mr. Henry Sydnor Harrison thinks differently. To be sure his heroine, he assures us, is a woman of real ability, but she had lived long in the limelight; she had slapped the face of a Governor, had been hit with a brick on the State House steps at Albany, had been up in an airplane, down in a submarine; had taken up suffrage, run the Eight-Hour League and, as she is as strenuous as was the late Theodore Roosevelt, she now, at the opening of the book, has just bought out the Whitestone Steel Co., got possession of the greater part of the stock and intends to run it herself and on her own lines. Handsome, enormously rich, capable, and with no relatives near enough to exert a restraining influence, such is Teresa de Silver, absurdly called St. Teresa by her friends on account of her indifferent attitude toward men, of whom however, she is represented as having a large following. So we get the book's title, "St. Teresa" (Houghton Mifflin Company, \$2.00).

It is the exceptional man who really likes a clever woman, and if to her cleverness she adds a brusque manner and a general neglect of the gentler amenities of life, his indifference soon becomes something stronger. Everything that Dean Masury hears about Teresa de Silver increases his dislike for her and her type, and when his friend Lucy Flanner tells him that if he knew her he would acknowledge her charm he is highly indignant, and by way of proving his impenetrability he takes the job of reorganizing the office of the Whitestone Steel Co., which will bring him into close contact with her.

He soon finds out what he had suspected—Teresa is a pacifist. She at once stops the making of ammunition for the Allies (it was before the entrance of this country into the war) and closes the plant, to the great disgust of the stockholders. Masury's indignation is great; he can not conceive of a pacifist being moved by conscientious motives and he sets himself to work to defeat Teresa's plans. He gets together every cent he can raise, buys enough stock to decide the policy of the company and, triumphant at last, asks for an interview with his employer before leaving for France, where he is going to drive an ambulance.

By this time Masury has come to regard Miss de Silver with mixed feelings. He resents her almost as fiercely as ever, but a sense of justice compels him to acknowledge certain good points. Her truthfulness, her sincerity, her fairness can not but command respect, and she also possesses a trait, unusual in her sex, the

"Dollar Topkis gave me new ideas about value"

"I'd like to have the money I've wasted because I was afraid to buy an athletic union suit priced as low as a dollar. I cheerfully gave up double, year after year.

"I didn't know Topkis then.

"Finally, a persistent salesman in Johnson's shop argued me into trying Topkis. He landed me as a life-time customer.

"My dollar never before brought me as much quality and value as I get in Topkis. Loose, airy fit that keeps me comfortable all over and lets my skin breathe. No skimpiness; no bagginess; no pinch, no pull.

"Wear? That's where Topkis

shines. Keeps its size, too, no matter how often it's washed."

Topkis Athletic Union Suits are made of best nainsook and other highgrade fabrics. Pre-shrunk—full size guaranteed. Be sure you get your correct size—38 if you wear a 38 coat, and so on.

No good dealer will ask more than a dollar for the Topkis Men's Union Suit—although many will tell you it's worth more.

Men's Union Suits, \$1.00.

Men's Shirts and Drawers, 75c per garment. 75c for Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits.

TOPKIS BROTHERS COMPANY, Wilmington, Delaware
General Sales Offices: 350 Broadway, New York City

He swapped a gold mine for a can of Edgeworth

Of course William didn't know how much gold there was in the mine or he wouldn't have paid so high a price even for his beloved Edgeworth.

As he writes the story with lead pencil on the back of a map—

Dear Mister Larus & Bro. Co.

You'll notice I ain't going to let them people what puts out that xxxxxxx (this was the name of a competitive friend's product) stuff get away by their lonesome in the high price class; cause they're just tin horns anyway alongside of me, what traded a claim in the Diddyrod country one time for a small tin of Edgeworth.

And the sourdough what got the claim from me for the Edgeworth took eighty thousand dollars out of the ground what I didn't think was in it.

William Craigie

Salchaket Post-Office
Alaska

That was the most expensive can of Edgeworth that ever was bought. We have many letters from our friends who have gone to great lengths to get their favorite tobacco. We prize them all, but this one has a particularly warm place in our hearts.

We don't want any Edgeworth smoker to have to pay more than the regular price for Edgeworth.

We do want every pipe-smoker to try Edgeworth, and it's just as pleasant for us to

send free samples to any pipe-smoker as it is for a pipe-smoker to hand his can over to someone who's run short.

If Edgeworth doesn't suit you, it's no use trying to sell you any. If it does, the samples will soon tell you, and you'll be like the rest of us—happiest with a pipe of Edgeworth between your teeth.

Send us your name and address on a post-card. If you want to help us further, give us the name of the dealer from whom you usually buy your tobacco.

Just as soon as we receive your request we will mail you generous samples of Edgeworth in both forms—Plug Slice and Ready-Rubbed.

Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are put up in pocket-size cans, in attractive tin humidors and glass jars, and in various quantities in between those sizes.

For the free samples, address Larus & Brother Company, 5 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you pre-paid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

REVIEWS OF NEW BOOKS Continued

ability to bear criticism. He is even reaching the point of allowing that her pacifist views may not be entirely due to a desire for notoriety, and on one occasion he even goes so far as to defend her at a club from a slanderous comment. And then comes the climax. Teresa gives him an interview at her house, and when he tells her of his purchase of the stock it is only to find that she too has been buying shares, that his trouble has been in vain and that she still controls the policy of the company.

Beside himself with rage, Masury suggests in plain terms that she has used her good looks in the transaction and the result is a hand-to-hand fight, in which Teresa shows her usual ability and in which Masury, losing all control of himself, and finding Teresa's face near his, kisses her. She bites him! This is a fatal mistake on the part of the author. Harrison has destroyed, or at least given a shock to whatever sympathy the reader might have felt for his heroine. But, of course, there is but one ending for a novel like this, and the seasoned novel-reader will have no trouble in guessing it.

WHY EDUCATE THE NEGRO?

AS the train leaves Cairo, Illinois, the Pullman-ear conductor asks Peter Siner to take his hand-baggage and step into the Jim Crow ear. The request comes as a sort of surprise to the negro who has just graduated from Harvard, for his four years in the North have somewhat blurred his recollections of the segregation of his race in the South, but he complies at once.

Here is the theme of "Birthright," by T. S. Stribling (Century Co., \$1.90)—the problem of the educated negro. Siner's desire is to work for the elevation of his race through education. He wants to open a school for the colored population of Hooker's Bend, and for that purpose buys a small property near the village. It is only when the papers are signed that he reads the deed which he finds contains a clause that no school shall be opened on the premises. This fraud on the part of the prominent banker who sold him the land is considered an exquisite piece of humor by the white residents of Hooker's Bend and shows more plainly than any sermon one of the degradations consequent upon slavery.

The picture of the negro quarter of the place, known as Niggertown, with its ramshackle cabins, dusty road and tainted well, is something appalling, and the absence of any knowledge or practise of hygiene is amazing to the reader accustomed to Boards of Health and building regulations. Peter returns to these squalid surroundings with a resignation born of familiarity and tries to arouse in his own people a desire for education and self-improvement. It is useless. He gets no help or encouragement from the white residents, who are as ignorant in their way as the blacks, and the born indolence of the negroes is impossible to overcome. Matters are complicated by Peter's falling in love with a pretty octoroon who has all the charm and all the frailty of her kind. She, too, has been away to school and has some ideas of self-improvement, and the story ends with their marriage and departure for Chicago where they will have a better chance in life, for Peter sees all too clearly that there is no place for him in a spot like Hooker's Bend.

As a true picture of the life it describes, even those who have never been south of Mason and Dixon's line must be convinced, and as a portrayal of the evils and injustice of miscegenation it should give even the strongest admirer of Southern life cause for meditation. It also throws a light, in the attitude of the really amiable Captain Renfrew, upon the scientific attainments of a really conservative Southern gentleman. "The library was not an ordinary compilation of the world's thought; it, too, was an attorney's special pleading against the equality of man. Any book or theory that upheld the equality of man was carefully excluded from the shelves. Darwin's great hypothesis, and every development springing from it, had been banned, because the moment that a theory was propounded of the great biologic relationship of all flesh, from worms to vertebrates, there instantly followed a corollary of the brotherhood of man." But not much else could be expected from an old gentleman who believed that slavery was placed in America to rear up giants of political leadership in order that she might weather the revolutions of the world.

The author is a Southerner who writes of what he has seen and known, who recognizes the evil, but has no opinion to offer, no remedy to suggest. As one reads and perceives the attitude of the white citizens toward the negro, their stupidity and dishonesty, a feeling of despair ensues, while the indolence, the indifference and the lax moral standard of the colored people themselves lead one to realize the wonderful work done at Hampton and Tuskegee, and marvel that any one should have had the courage or the faith to attempt it. There is no propaganda in the book.

NO FLAPPER, THANK YOU!

GOLDIE GREEN has had the most ordinary upbringing, and is the oldest daughter in a family distinguished for little but its weakness and its failures. When she makes her appearance she is ticker-seller for a motion-picture house in a Chicago suburb. She sits in the little cage out in front, looking through the glass at the world as it passes, talking slang to it, sizing it up, smiling at it, and quite wise to its tricks, particularly the tricks of the men who want to make dates and get what they can out of any concession they may be able to wring from her. In fact, she is exchanging badinage with just such a man at the instant when we make her acquaintance. Her brother chances to butt in on the little interchange, and attacks the person, getting a black eye for his pains. Goldie has not seen the encounter. She would have laughed if she had, for she can take care of herself, and she has a most definite notion of what this brother amounts to, and of how futile his championship would necessarily prove. P. Heigham, or Perce, as Goldie calls him, was small, serious and worried. He understood little of what went on about him, and of the life his sister led he was entirely ignorant. His devotions were the local Y and his clerkship, and such reforms as happened to be in the wind.

Samuel Merwin, in "Goldie Green" (Bobbs, Merrill & Co., \$2.00), has written a book about the modern girl that has nothing of the flapper element in it, that gives us an individual who is representative of a type, a type impossible a generation ago, a type that meets the demands of life with a smiling courage, with entire self-confidence, with a knowledge beyond that ever acquired by its maternal predecessors, and that pits its brains and its beauty

How to Stop a Ford without "Jerking"

That faithful little car wasn't made to stop with "jerking" and "chattering". Faulty lubrication is the reason some Ford owners have this trouble.

"Chattering" need worry Ford owners no more, because "F" Autoline Oil for Fords will stop "jerky" starting, stopping and reversing.

"F" Autoline for Fords is a motor-oil—not a miracle. It softens the fabric in the brake and transmission band linings and lets them grip the transmission drum as they should.

Dealers recommend "F" Autoline Oil. The Hoshach Motor Company, authorized Ford dealers in Baltimore, writes: "The smooth starting and stopping experienced as the result of the use of your oil is remarkable."

"F" Autoline Oil is made by a 90-year-old company, makers of "OO" Autoline Oil, one of the few oils recommended in the Franklin Owners' handbook for use in Franklin Cars.

Drain all the oil from your crank case and fill it with "F" Autoline Oil for Fords. If the "chatter" isn't stopped, go back and get your money. You don't risk a penny. We guarantee that your Ford will run smoothly.

Look for the red Autoline Oil sign that points the way to a dealer or garage that sells "F" Autoline Oil for Fords.

against men in the open field of the world's opportunities and wins what it wants.

But that biff in the eye was to have consequences. It was to start Goldie on the upward trail, and it was to open wide doors on the world.

Goldie is a vivid thing, loving life, loving the contacts and the dangers and the thrills of life, loving to have what she calls a scrap on her hands. The more difficult the situation, the better it suited her. When every bit of her brain and all her nervous energy were being used to the full, then she was happy.

The man who had punched her brother in the eye proves to be a friend in a business way of Mr. Green, of Papa. He is coming, and does come, to dinner that evening to discuss a contract which will give Green the agency of a car insurance for Sunbury. Action is swift when Goldie, Perce and Mr. Williamson meet at the family board. It ends with the abrupt withdrawal of Williamson, and the despair of poor Papa, who has been gradually going down and who had looked for this new job to give him breathing space.

But Goldie sees her chance, and takes it.

She becomes the agent, and she is a good one. And from then on we follow her increasingly brilliant career and her mental growth and breeding.

Mr. Merwin has perhaps made this growth too sudden and too speedy. Goldie never makes a mistake, nor even a slip. She handles the men with whom she comes into contact both in a business way and emotionally with the completest self-possession and success. She sees her way straight, and she walks right ahead. Her family is impossible, but she uses it as a spur, not a drag. Goldie is convincing, however, for all her infallibility. She has clear ideas and she can work—work endlessly and keep her enthusiasm. She has the gift for snatching at opportunity, and her mind runs along with a plan, maturing it as it goes.

This is woman's day, and in this story we are shown the product of the last few years of forward marching. Girls no longer grow up inside sheltering walls, they are in the open, and they are expected from their teens to give an account of themselves in a productive, money-making way. Mr. Merwin calls the age the most materialistic and sordid period of self-indulgence in the modern history of man. There is too much of everything—too much money, too many jewels, too many automobiles—the crass triumph of money over faith and beauty. But he shows us the good side of this most modern period too. The frankness possible between men and women, the good comradeship, the honesty. Goldie, compared to her whining, selfish, silly and extravagant mother, is as fresh and sweet a human development as the world has known, and it is the period that has done it. We have a lot to cure in this modern life, but we have a lot to be thankful for, and Mr. Merwin is singularly able to paint both pros and cons. He has written not only a good story, but a story that will bear thinking about, and has drawn an original portrait of a type that has sprung up almost over night, the wholesome, sound, expert and clever contrast to the flapper, who has been studied and discussed ad nauseum, and who is neither so significant nor so interesting as the Goldies of to-day.

A LOVER NOT A MURDERER

IMAGINE a billiard-room of an English country house where Mary Trevert has just refused Robin Greve, the man she loves, announcing at the same time her engagement to their host, Hartley Parrish, a man of unknown antecedents but enormous wealth. This is a great blow to Robin who abruptly leaves the billiard-room and, passing through the hall where many of the guests are seated, goes past the library into the garden. Fifteen minutes later a shot is heard from the library where Parrish was busy and, on an entrance being forced, he is found lying on the floor, a pistol in his hand, a bullet in his heart. The police are summoned, the guests and servants are questioned, the usual procedure followed. Was it murder or suicide? Opinion is divided. Thus the scene is set for those who enjoy a good detective story, and their name is legion, and to them "The Yellow Streak" (Houghton Mifflin Co., \$1.75) by Valentine Williams, can be recommended. Unlike some detective stories Robin is not at once arrested on general principles as being the person whom the reader would least like to believe guilty. A certain amount of suspicion attaches to him as having been the last person seen in the vicinity of the crime, but even the rural police perceive that something more is necessary in the way of evidence, and the fact that he at once sets about helping solve the mystery soon clears him.

Robin has found on the floor of the library, and mechanically pocketed, a ball of gray letter paper which puzzles him when he looks at it later, for it is blank except for a date in one corner, but full of a number of small rectangular slits. Here is the one weak point in the story. Even if this were not a well-known form of cipher any intelligent person should be able to guess its use on sight, but Robin does not, and it only adds one more to his perplexities. The police are inclined to consider the case one of suicide, but Robin is not so sure. Opposite the library window, on a little elevation, is a rose-garden, and while Robin is making his observations he notices that the bark from one of the rustic poles has recently been shorn away as if by a bullet. Another puzzle is that the butler is sure he heard voices in the library before the shot was fired, a fact which tends to incriminate Robin, tho he swears he had not entered the room.

Of course Mr. Parrish's correspondence is investigated, but it is only by chance that Robin learns from an ex-private secretary of the dead man that certain letters marked "Personal" were never to be opened except by the man to whom they were addressed. On one occasion the secretary opened one of these by mistake, and altho he went at once to Mr. Parrish to tell what he had done he was immediately dismissed. These letters, young Wright went on to say, were written on blue-gray paper and came from a firm in Rotterdam, and he added that whenever his chief received one of these letters he became very gloomy. Moreover, he also ventured the opinion that the case was one of blackmail.

And now Bruce Wright joins in the search and the result of his first effort proves to Robin's satisfaction what he had been pretty sure of for some time—that Mr. Parrish had been murdered. Wright has an interview with the financier's valet and learns from him that his employer's pistol had a silencer on it, which has disappeared. This accounts for only one shot having been heard, the second one, fired from the outside; the first one, the one which

grazed the post in the rose-garden, having been inaudible on account of the silencer, which argues that the murderer must have entered the room and removed the silencer from his victim's pistol.

There is a good deal yet to be done before the mystery is cleared up, and before that Mary Trevert makes a hurried journey to Rotterdam and is in considerable danger before Robin comes to the rescue, but everything is finally wound up in a most satisfactory manner. The story is interesting and none the less so because it is less sensational than many of its kind. Robin is not imprisoned for a crime of which he is guiltless nor is the reader's blood made to run cold by tortures inflicted upon helpless victims. The mystery slowly unfolds, and when the author has finished telling his story, he stops.

MAMMON RENAMED

CLEVE HARROD is the ugly duckling in a family of kindly, commonplace, sensible people. He likes to read, he wants to go to college, and his strong ambition and firm purpose is to write. Before he finishes his course at the University, his father dies, leaving so little money that a readjustment of the family life is necessary. Cleve's brothers are working and Cleve is anxious to help, but his talents, such as they are, do not seem to be very marketable, and he is glad to get a job in the Sunshine Bakery where he makes friends with a cheerful person of low degree named George Tarvey who is employed there as baker, and who may be described as a typical American, inasmuch as no other country could possibly produce him.

The Middle West seems likely to be with us late and often, but in spite of popular successes not everyone can write the history of a plain, ordinary, middle-class and Middle-West family and not only make it interesting but make the reader feel as if he would like to know them. Mary S. Watts has done this in some of her earlier books, and in "The House of Rimmon" (Macmillan, \$2.00) the story opens in a small Western college town, tho the principal characters soon leave it for busier scenes.

The war breaks out, and even before the United States takes a hand great changes are felt. When the time comes Cleve enlists, but never goes overseas, and when peace comes he feels a strong reluctance to return to his old home, so he turns his steps to New York and embarks upon the real adventure of trying to earn his living in a strange place. He has a little money, having saved his pay, and when that is gone, instead of starving to death in a garret or blowing his brains out he goes out and gets a job in a small restaurant; later, the proprietor being run in for violating the Volstead Act, Cleve ships as steward on a steamer running to Bermuda.

In the meantime Tarvey has turned up, and with him his sister, whom he admires and adores, a beautiful girl, who is one of the best drawn characters in the book. Sophy has been a chorus girl, and in spite of her errors in taste is a good sort, but her health having given out, her brother is taking care of her, his affection mingled with keen anxiety, and he is only too glad to get a job as cook in a Bermuda hotel, for that means a good winter climate for Sophy.

To this hotel, which is also the one where Cleve spends his off days, comes a successful writer who interests himself in Cleve's work and gives him the help he needs to get before the public. So Cleve goes back to

Economical Transportation for Business

The World's Lowest Priced FULLY EQUIPPED Light Delivery

*For Economical
Transportation*

\$ **525** *f. o. b.
Flint,
Mich.*

*Complete with Body, as illustrated
Commercial Chassis Only, \$465*

*For Economical
Transportation*

A noted expert in transportation has stated that its next stage of development will not be through the introduction of new means for transportation, but through more efficient and economical use of existing means.

The continuous aim of the Chevrolet Motor Company is to produce modern fully equipped automobiles that afford economical transportation at the lowest possible price.

In the passenger car field, through this policy, Chevrolet has won first place in volume of sales of standard, fully equipped cars. The car here illustrated warrants the expectation that Chevrolet will quickly achieve similar distinction in the commercial field.

Chevrolet Light Delivery consists of the same New Superior model chassis that is so popular in our passenger car line, with full modern me-

chanical and electrical equipment, and also includes the open express body illustrated, already attached.

For a moderate additional charge, two extra seats may be had making it convertible into a school or hotel bus, or a depot car for country estates.

The chassis can be had without body for \$465 f. o. b. Flint, Mich., for use with special bodies made to fit it by the Martin Parry Company and other large body builders.

All of our 5,000 dealers show and demonstrate the various types of this model and also our Model G and T trucks of greater power and larger capacity.

Concerns in the market for more economical transportation of merchandise or salesmen are requested to write our Fleet Sales Division.

TRUSCON STANDARD BUILDINGS

Exactly Meet Your Needs

The purposes for which Truscon Standard Buildings are being used are innumerable. Their economy, permanence and adaptability are continually suggesting new uses. Made entirely of interchangeable steel units, they exactly fit individual needs.

Factories—In every industry Truscon Standard Buildings are being used not only for large factories, with cranes and monorails, but for storehouses, foundries, garages, time offices, cafeterias, etc. They provide ideal working conditions.

Shops—There is a type and size of Truscon Standard Building for every shop and manufacturing need. Permanent, fireproof, daylighted, well-ventilated, they also provide supports for shafting, etc.

Warehouses—Fireproof, economical in cost and quickly erected with minimum labor cost, Truscon Standard Buildings are furnished in all sizes and can be readily enlarged or re-erected in new locations with 100% salvage.

Garages--Filling Stations

Truscon Garages designed with any desired front provide perfect ventilation, ample daylight and unobstructed floor space. Truscon Filling Stations are good looking, fireproof, and sturdy—readily dismantled and re-erected in new locations without loss.

REVIEWS OF NEW BOOKS

Continued

New York and tries his luck with a play. In the meantime he has drifted into a marriage with Sophy, who altho devoted to him and willing to work day and night for him, is entirely unable to appreciate his work.

After various vicissitudes Cleve is encouraged by a success he has with one of the small neighborhood theaters of the town, to offer a play to a producer whom every one will recognize. To his surprise it is accepted provisionally and he meets the impresario to talk over a few necessary changes. He is disgusted to find that these changes, called making it "vital" by the manager, involve the introduction of various indecencies, and Cleve, indignantly refusing, withdraws his play. But, as may be inferred from the title, he finally succumbs. He is cramped for money, Sophy's health is not good, and a sudden demand for some two or three hundred dollars clinches the matter. He makes the desired changes—he bows in the House of Rimmon.

Like all Mrs. Watt's books it is interesting. The narrative flows smoothly, much of the character-drawing is extremely good, and the description of the first night of the play, with its carefully manipulated curtain calls, is accurately done, but the author is at fault in one important particular. So shrewd a manager as Delmar does not prefer the salacious play to the clean one for the simple reason that the former scores only in New York and is valueless on the road.

THE SOLACE OF THE PRAIRIES

HOW could you kiss a woman like that?" Wife and husband confront each other. For she has found him with the school-teacher in his arms; and it was clear enough that to the woman, anyhow, the embrace meant everything in the world.

Duncan is cool and cynical about it. Yes, he kisses, he finds it interesting to kiss, and for that matter he will probably go on kissing. Let his wife make what she chooses out of it.

So now Chaddie has her problem out in the open, to face and to understand. And she can not simply open the door and walk away from this man, as she wants to. For there is her son, there is her daughter, little children to whom she owes all they need. And among other things they need a father.

Duncan is not only weary of his wife, but of his prairie home. He craves wealth, excitement, the life of the cities. But for Chaddie that desire is past. As she expresses it:

"I don't know what mysterious Divide I have crossed over, but it seems to be peace I want now instead of experience. I'm no longer envious of the East and all it holds. I'm no longer fretting for wider circles of life. . . . What I want now is a better working plan for that which has already been placed before me. . . . There was a time, I know, when I used to fret about the finer things I thought I was losing out of life, about the little handmade fripperies people have been forced to conjure up and carpenter together to console them for having to live in human beehives made of steel and concrete. But I'm beginning to find that joy isn't a matter of geography and companionship, isn't a matter of over-crowded subways. . . ."

There are some remarkable talks between

the two of them, talks that put their human selves into words. We know them both thoroughly, this woman and this man, and long before Chaddie herself sees that it is impossible for the two to go on living together, we see it. There is a sundering sword between these two spirits that must eventually cut them loose from each other.

Arthur Stringer completes his trilogy of the Prairie Woman with this latest volume "The Prairie Child" (Bobbs Merrill, \$2). The three books together make a most penetrating study of a woman's heart and mind, such a study as it would seem almost impossible for a man to succeed in putting on paper. He places this woman in the wide and free environment of the great prairies of the Canadian West, where there is nothing to trammel the view of her. There she stands, under the arch of the sky, and there she works out the problems of her life.

And these are no slight problems, for all that they belong to most human lives. She marries a man with whom she is in love, and who loves her, in a fashion of speaking. That is, he is not the sort of man a woman could tie to with any confidence. He is essentially selfish, and there is a streak of the bully in him. He is vain and he is weak. Yet he has charm, culture and that air of gay domination which appeals to a young girl. Chaddie begins life with him in all confidence. She has a temper that can flare up dangerously, but which is generous and kind, a true sense of humor, which can laugh at herself as well as the world; she is warm of heart and soul, and she becomes passionately devoted to her prairie home, despite the hardships and the labor.

The first book shows her in her happy youth, making the new home livable, meeting the new conditions, loving wholeheartedly, yet beginning now and then to have tremors of doubt as to this man to whom she is linked. The second book takes her with her new rôle of mother, and life suddenly becomes bigger and sterner. She sees more clearly and she feels more deeply. She is determined to walk straight and strong, however difficult the path, and she is determined to be happy in thus walking onward, side by side with a man whom she knows now very well indeed, but for whom a strong affection remains in her heart, for all the disillusion he has brought her.

And now we see her reach the concluding period of her life with Dunean.

Just how Chaddie solves the situation, and what the future holds for her is to be found in Mr. Stringer's book. There are some unlooked-for developments and some tense moments. And Chaddie, in her endeavor to be utterly fair, even leaves the beloved prairies and goes to Calgary—an interesting interlude, that city life, if Calgary may fitly be called by so splendid a title!

The little son plays a large part in this portion of the trilogy, not so much for what he does or says, for he is not obtruded, but for what he is, and for one big gesture which reveals both him and his father beyond any camouflaging. His mother loves him with a white passion she gives to nothing else, but with a fine discretion and restraint that is beautiful.

The story is told, as were the others, in the journal form by Chaddie herself. The novel manages to keep flexible, nevertheless, and it gains a color, a reality that might not have been possible to any other form. It is a book that is worth reading and keeping to read again.

Hosiery—The Most Important Detail of Dress Today

IN these days of ankles on display, it's rather nice to display one's ankles—provided, of course, that the hose are Holeproof.

Elegant, lustrous appearance and fine texture mark Holeproof as the hose of style and refinement—and it is famous for its wonderful wearing qualities. The new spring colors in standard and fancy styles in Pure Silk, in Silk Faced, and in Lises, for men and women, are now being shown by leading stores everywhere.

If your dealer cannot supply you, write for illustrated booklet and price list

HOLEPROOF HOSIERY COMPANY
MILWAUKEE, WISCONSIN

Holeproof Hosiery Co. of Canada, Limited, London, Ont.

Will your safe stand this?

SUPPOSE your building should burn. Intense heat; falling walls and perhaps an explosion; crashing debris; cold water—will your safe guard its contents?

Every one of these destructive forces has been considered in building

THE NEW Herring-Hall-Marvin SAFE

It has withstood a temperature ranging up to 2100 degrees Fahrenheit before the heat inside reached 300 degrees. This is 30% greater protection than heretofore considered possible.

The New Herring-Hall-Marvin Safe also has the structural strength to withstand falls; to resist the crashing of girders and bricks; to meet the shock of an explosion; and, finally, to stand cold water when at white heat. It is only reasonable to expect this safe to go clear through the worst fire!

Interchangeable filing equipment for interior to suit your needs. Burglar-proof chest added, if required.

The sixteen larger sizes bear the "A" Label of the Underwriters' Laboratories, Inc.; the six smaller sizes, the "B" Label. Sold by leading dealers.

Write for booklet, "The Most Complete Fire Protection Ever Built," and name of dealer.

BETWIXT LIFE AND DEATH

"NOT dead; but very far from being alive." In this state, termed by the author "latent life," organized beings, both animal and vegetable, often persist for a long time. It is discussed in *The Scientific Monthly* (Lancaster, Pa.) by Professor D. Fraser Harris, of Dalhousie University, Halifax, Nova Scotia. Those who have read About's story of "The Man with a Broken Ear," will realize, after perusing what Professor Harris has to tell, that this French tale of long-suspended animation is not so much of an extravaganza as they have hitherto considered it. If asked to say whether an animal lying in the road was alive or dead, we should at once try to arouse it, says Professor Harris; and if the animal jumped up or turned over, we should at once say it was alive; if it failed to do so, we should assume that it was dead. Response or reaction to the environment is then the great criterion of life. He continues:

A living animal organism is characterized by the following capabilities of powers:

(1) It can feed, that is, assimilate to itself material chemically often quite unlike the composition of its own tissues. This digestion and incorporation involves the getting rid of material useless or injurious to the organism. The one word "metabolism" covers all the changes wrought on matter by a living being.

(2) It can transform the potential energy of food into the kinetic energy of heat (animal heat), movement, nerve-energy and electric current.

(3) It is able to resist infection and, within limits, all agencies tending to compromise its integrity.

(4) The living body has a life history; it goes through an orderly sequence of irreversible phases. The living being is never stationary; it has time relations. Amid this constant change of material, personality or identity is maintained.

(5) Finally, it can reproduce itself.

None of these things can a dead organism do; death is a state of infinite physiological inertia.

Livingness is exhibited not only by entire organisms but by their constituent tissues and cells. For tissues and cells can feed, excrete, produce heat and electric current, give rise to anti-bodies, and, finally, produce new elements. The reason for the life of the entire individual is that each of its ultimate constituents is alive.

In judging of the livingness of isolated organs, tissues and cells we must have some convenient method capable of being followed out in the laboratory. The signs of life in the laboratory are, for instance, in the case of muscle—it absorbs oxygen, it gives out carbon dioxide, it produces heat, it twitches or contracts, and finally it can evolve an electric current.

Of all these signs of life, the one mentioned last is by far the most delicate. Even after the heart has ceased to beat, it can still evince electric disturbance. The evolution of electric current is the most delicate sign of life, and it is also the last sign.

Now it is clear that there must be

Get this valuable Book on Better Lawn Care

Every one interested in the care of large, beautiful lawns should have a copy of this book, which tells all about Ideal Power Lawn Mowers. It shows many photos of well-known homes, parks, golf clubs, cemeteries, colleges, etc., where the lawns are cared for the "Ideal Way." It tells about the Ideal Junior, a moderate priced power mower for medium-sized lawns, the 30-inch Ideal Power Lawn Mower for large lawns, and the Ideal Triplex Power Mower for large parks, golf clubs, etc. Write for this book today—learn how to keep your lawn in better condition at less cost.

Mechanical Marvel

degrees of livingness in tissues, for, whereas some, like liver and heart, are intensely alive, others, such as the upper layers of the skin, have little vitality, and yet others—enamel of teeth and horn of nail and hair—are absolutely dead.

It is similar with entire organisms; we can construct a scale of all degrees of livingness from the great physical and mental vitality of a Gladstone at one end, down to the stupidity of the country yokel at the other.

Now vegetables and animals can enter into a certain state in which, altho they are not showing any of the ordinary signs of life, they are nevertheless not dead: this state is called latent life. The only sign of livingness exhibited in latent life is the electric current. A dried seed is a good example of this condition; it seems dead, but the ordinary person can ascertain whether or not it is dead by planting it in the ground and waiting until it has or has not produced a plant. Similarly, to know whether an egg is alive or not, "wait and see" if it hatches. Drying is an excellent method for sending many living things into latent life. In 1719 the Dutch naturalist, Leeuwenhoek, found minute animals called Rotifera dried up in mud, apparently dead, but able to live again when moistened with water.

This rising as it were from the dead is called Anabiosis. Besides the Rotifera, or wheel-animalcules, other minute animals, the Tardigrada, or bear animalcules, the Anguillulidæ, or paste-eels, and some kinds of thread worms, are all known to be able to survive extreme degrees of desiccation for as long as twelve years.

Obviously, only simple or lowly animals can live after being dried up; and yet the wheel-animalcules are not so extremely simple, seeing that they have a nervous system.

A much more widely applicable method of sending organisms into latent life is that of cooling them, says Professor Harris. The bacteria, the simplest of all plants, show extraordinary resistance to refrigeration, for they can be frozen down to the temperature of liquid air and yet retain their vitality. The fact that the "germs" of decomposition of meat can be sent into latent life by being frozen is taken advantage of in the commercial process of cold storage. He goes on:

Recent research on the preservation of fruit in refrigerators has shown that the spores of the Black Spot fungus can be kept for six months at minus five degrees centigrade, and yet germinate at ordinary temperatures. The whole problem of the storage of fruit is being studied in the light of recent work in biology. Fruits pulled off the tree are still alive. They are ripening, and this consists in their ferments forming sugar out of unsweet materials. By being chilled, however, fruits can be brought into latent life, which is evidently the condition to have them in if storage for a long time is desired.

Coming now to the animal kingdom, Sir Ernest Shackleton has reported that in the South Polar seas there are certain lowly marine organisms frozen motionless in the ice for ten months in the year, but able to swim about actively for the other two. Physiologists know that snails, water-beetles, insects, frogs and fish can withstand temperatures so low that warm-blooded animals would be killed outright. A fish has been frozen in a block of ice,

SCIENCE AND INVENTION

Continued

then sawn in half along with the ice and each half has, on being melted, performed active movements.

On the approach of winter frogs descend into the mud at the bottom of the pond and there rest in latent life until next spring; this is their form of hibernation. In all probability they are not frozen stiff, but their life processes must be at an exceedingly low ebb. Snakes behave in a similar manner.

The warm-blooded animals can not withstand anything like the extreme degrees of drying and chilling which the more lowly and hardy animals are able to endure. Nevertheless, tissue changes can become so deprest that a state of virtually latent life can be entered upon. Such a condition is seen in the hibernation or winter sleep of bears, tortoises, hedgehogs, dormice and marmosets. We learn from these cases of hibernation that even after breathing ceases, the animal may yet live; but it may surprise some readers to learn that even after the heart has ceased beating the organism does not necessarily die all at once. The fact is, many of the tissues of the body live for a long time after the body as a whole is dead.

Can a human being enter into the state of latent life? The answer is "Yes"; but no human being can be dried up or frozen stiff like some of the lowlier creatures and yet live.

What is known as trance or narcolepsy is the form which latent life takes in the human being. Every now and again we hear of cases of persons, usually young women, going into profound and prolonged sleep from which they do not awake for weeks or months. Stories of persons "laid out" for the undertaker, and reviving on his arrival are not unknown.

Still more extraordinary are the narratives of the Fakirs of India, who are said to allow themselves to be built up in sealed tombs for weeks without food and to be alive at the end of that time. Reports of these cases of human suspended animation are now too numerous and too well authenticated to be set aside.

Many people if asked to give an example of suspended animation would refer to the case of some one apparently dead through drowning. Speaking strictly, a drowned person is *not* in latent life. On the contrary, a drowned person is dying; but most fortunately, the several tissues do not die the moment the individual as a whole dies, but can survive long enough to be revivable if only enough oxygen can reach them sufficiently soon.

The latent life of isolated tissues is a remarkable phenomenon. Alexis Carrel of the Rockefeller Institute has actually been successful in causing tissues isolated from chick embryos to grow in glass vessels in a drop of blood-plasma, for as long a time as two or three years at ordinary temperatures. When, however, this "culture" was placed in a refrigerator all growth was stopt, and as long as it was chilled, it exhibited no growth, the isolated tissues having gone into latent life. Fragments of heart muscle can similarly be kept for two or three months.

The state of latent life may be regarded as a condition of high resistance toward those conditions which make for death. All poisons tend to kill protoplasm, to immobilize it; death is the complete immobilization of living molecules; whereas

HOW CAN I ENJOY RADIO at home?

What is the best way for me to listen to the daily concerts, news, government reports, sporting results, etc.? What kind of set will I need? How shall I put up my aerial? Just what are the different pieces of apparatus for?

Lefax Radio Handbook is the one recognized authority where you can get dependable information on every phase of radio. Whether you buy a complete outfit or make it yourself, Lefax will explain just how it works and how you can change it to get best results under varying conditions.

latent life is a degree or stage toward this end. Upon this partial immobilization depends the efficacy of a large number of our drugs and the action of many poisons. To abolish consciousness we administer chloroform. The anesthetic really tends to immobilize the brain cells, the cells of the breathing center and the heart cells; what the surgeon wants is unconsciousness to pain without heart paralysis which would mean death.

"The organism in latent life is not dead, but it is very far from being fully alive. In living matter, the molecular whirl is at its intensest; in latent life the molecular whirl is for a time arrested; in death the molecular whirl has been stopt for ever. In life 'the sands of time' are running out rapidly; in latent life the stream has stopt; in death the sand is all in the lower globe."

MORE ABOUT UNDERWEIGHT

THE conclusions of the article on "The Great Underweight Delusion," contributed to *The Outlook* by C. K. Taylor, of Carteret Academy, Orange, N. J., and quoted recently in these columns, are opposed by Mrs. Ernest R. Grant, director of the Children's Health Crusade, Washington, D. C., in a later issue of the same magazine. Mr. Taylor's contention is that a child is underweight only when he weighs less than he ought, and he denies that height alone is a sufficient criterion of what he ought to weigh. Mrs. Grant believes that average height and average weight correspond sufficiently for us to rely on the standard tables commonly used for comparisons. The weight of a child, Mrs. Grant says, is a practical index of his physical condition. If he is habitually 7 per cent. or more underweight for height, he is considered by many prominent pediatricians to be seriously in need of attention. When given a thorough examination, he will show marked signs of malnutrition. She continues:

"Records based on a study of 22,000,000 school children during 1918 showed 20 per cent. of the American school children are malnourished," says Dr. Thomas B. Wood, of Columbia University, Chairman of the Committee on Health Problems of the National Council of Education.

"Extended studies have shown conclusively that children 7 per cent. or more underweight for height require treatment," to quote Dr. William R. P. Emerson, Director of the Nutrition Clinics for Delicate Children, Boston, Massachusetts.

"Of the first thousand underweight children examined at the Health Clinic at Montreal, Canada, a total of 6,404 defects were found, or an average of 6.4 defects per child," to quote H. R. Y. Reid, Director of the Canadian Patriotic Fund.

"Referring to 'The Great Underweight Delusion,' in the March 15 issue of *The Outlook*, the article gives as illustration the hypothetical case of a 'slender, wiry boy' 12½ per cent. underweight. The cause of underweight is assigned solely to heredity. Because the 'hypothetical boy' is 'noisy and obstreperous' his hypothetical father considers him in good physical condition. No report is given of the result of a careful physical examination for detecting the underlying physical defects or faulty food

Own a Tire Gauge Too

You can't put a tire pressure gauge on your instrument board, but you can carry one in your pocket or tool-box.

At all times you should know the amount of air in your tires.

Too much air and your car rides like a truck with solid tires.

Not enough air and your tires lose their strength by bending and flexing as they roll over the road and by straining and stretching the fabric or cords at every bump.

Don't guess at the air in your tires. Nine times out of ten the driver who guesses he has enough air has too much or not enough.

Don't depend on borrowing a tire gauge. Own your own gauge. A Schrader Tire Gauge will cost you \$1.25. The mere knowledge that your spare tire is fully inflated is worth that.

Air is free. You can put in as much as you want, without cost. You can let out too much without waste.

The Schrader Tire Gauge will last for years. It will not go wrong. It will not register inaccurately. Bold white figures on a black background stand out like figures on a slate.

Sold by garages, hardware stores and motor accessory stores.

A. SCHRADER'S SON, Inc., Brooklyn, New York

and health habits which ordinarily produce underweight in all but 'hypothetical children.'

"The assertion is made that 'whole races are typically slender, with weight below the general average.' However, no statistics are given to prove this assertion nor to specify that such races are underweight for height.

"To quote Dr. Joseph A. Murphy, Chief Medical Inspector of the Public Schools, Washington, D. C.: 'It has been my experience that children who are seven per cent. or more underweight for height when given a thorough examination are found to be in poor physical condition. That they improve in health, strength, and vigor when their physical defects, health and food habits are corrected, and that this improvement is accompanied by increase in weight.'

"The article further states: 'Folks with the weighing delusion' demonstrated that one-third of the children of a New Jersey town were underweight and that the same condition existed in 'private academies patronized by the well-to-do.' While the writer characterized this as a 'frightful delusion,' he made no attempt to show that these underweight children were not suffering from physical defects, faulty food or health habits, or some other reason needing correction; nor does he seem to take cognizance of the fact that the figures of this little New Jersey town curiously enough coincide with the percentage of the physically unfit as revealed by the draft statistics of 1918.

"Another statement is that the 'essence of the delusion' is that 'there is only one normal healthy type of build . . . the worshipful average.' Averages and measurements are very necessary factors in the scientific study of any problem. Individuals are measured mentally, and the rating obtained has much significance when compared with the average. If there occurs a variation from the accepted average, the cause is carefully studied and the significance of the variation from the average depends in each case upon the cause. The average is the basis for estimating the degree of variations from normal in all of these measurements. Therefore, in studying the health and nutrition of children variations from the average normal weight for height is an important factor in the discovery of cases needing correction. For it is the consensus of opinion of all of these 'deluded people' who are working with the underweight children that a child seven per cent. or more underweight for height is in serious need of attention, and when given a thorough examination he will be found to have a much higher percentage of physical defects than children of an average normal weight for height, and, furthermore, when these underweight children have had their physical defects corrected and are brought up to normal weight for height they are in much better physical condition, more alert mentally, and make much better progress in their school work."

A reply to this criticism, made by Mr. C. K. Taylor, author of the original article, follows it in *The Outlook*, Mr. Taylor acknowledges that Mrs. Grant has said many things that are seriously true and so much that should be known to many who are careless. It seems almost ungrateful, he says, to make any adverse comments at all, and yet one or two points must be touched upon, for the fact is that in depending so much upon mere weight comparisons many child-welfare workers do not go nearly as far as they should. He goes on:

"Noticing the weight of children was a first step. It has served a great purpose. It has drawn the attention of thousands of school folk and parents to many formerly unnoticed factors affecting the health of children. But it does not go nearly as far as it should.

"First of all, when children more than seven per cent. below average weight are treated for malnutrition, or some other ill, real or supposed (real in far too many cases), the fact is neglected that children within the limits of the average, or even children having weight over the average, may also have malnutrition or some other ill. The writer has seen too many children in clinic and elsewhere not to have observed many cases of this kind. And so it is that by emphasizing attention to slender children almost exclusively we are neglecting the great mass of children who may be heavier—more heavily framed, for instance—and who in many cases need special care and diet just as much as do those who weigh less. For this reason alone we are right in demanding a medical examination for every school child, whatever the weight, and a subsequent treatment of each child according to the findings of that medical examination. In brief, we utterly refuse to accept anything so unreliable as a weight comparison in lieu of a medical examination.

"And this brings us to the term 'underweight' itself. What does it really mean? Well, many would have us believe that it means a certain percentage below the general average weight for the same age and height. Many physicians have agreed with the writer that this can not be real underweight, for it does not

allow for individual differences of build. We believe that underweight exists when an individual is below the weight that individual should have, and that this can not be told by comparing that individual's weight with general averages, but specifically and solely by a medical examination. When the medical examination shows that a child has malnutrition or other serious ill, one can well believe that the child's weight is below what it should be. And this is a very serious matter, needing all the fine care and attention the thousands of devoted child-welfare workers and medical examiner can give.

"The writer is the last one to deny the existence of real underweight. It is frightfully prevalent. But the writer insists that it is not strictly confined to children who are below the general average in weight, and that therefore every child should be given a medical examination, and this and other similar ills be given proper care and treatment."

ALUMINUM IN PLANTS

THE METAL ALUMINUM is one of the chief constituents of the earth's crust, yielding precedence in quantity only to oxygen and silicon. Until recently it has been supposed, however, that it played no important part in the vital processes of plants or animals. This view is opposed by the researches of a Bohemian scientist, Dr. Julius Stoklasa, Director of the Government Experiment Station at the Technical High School in Prague. Investigation by Dr. Stoklasa and his associates has shown that the presence of aluminum is of great physiological importance in certain families of plants. Furthermore, it is intimately connected with production of color in various plants and animals, and even in minerals. Drought-loving plants—those that thrive best in deserts, on steppes and on sandy beaches—contain very minute quantities of aluminum. Moisture-loving plants, on the other hand—those which grow in water or near it—contain very large quantities of this metal. Certain cryptogams, such as sea-weeds, contain considerable quantities of it, even when dried. In the more highly organized plants, aluminum is concentrated more especially in the underground portions—roots, bulbs, etc., but it is also stored up among the reserve materials in their seeds. Those plants which prefer a moderate amount of moisture contain but little aluminum when they develop in a dry location, but large quantities when grown on damp or swampy ground. Dr. Stoklasa concludes from his observations that aluminum exerts a marked influence upon the chemical processes which take place in moisture-loving plants. Another interesting observation is that the presence of aluminum acts as a protection to the plant in soils which contain unduly large amounts of iron or manganese. He declares that aluminum is an absolutely indispensable constituent of moisture-loving plants which vegetate in a soil rich in iron compounds, since these would otherwise tend to injure the cells. This investigator also finds that aluminum, together with iron and manganese, plays an important rôle in the formation of the colors of flowers. Writing in *Die Umschau* (Frankfurt), he observes:

"These three elements affect not only the intensity of the color but also occasion the alterations of color which take place when white and pink flowers turn red, violet or blue, or when yellow ones turn red."

It is a curious fact also that when blue, violet, red, and blue-green pigments are found in either birds or beetles, there is a greater content of aluminum than in the case of other colors. Apropos of this, drought-loving plants which, as we have seen, contain little or no aluminum, are more apt to be white or yellow than blue or red. Dr. Stoklasa also remarks that our brightest colored precious stones contain aluminum, for example, rubies, sapphires, amethysts and emeralds. Scarcely less interesting is the conclusion that this metal was extremely active in the vital processes of the luxuriant flora of the coal age. Concerning this he says:

"Our experiments indicate that an excess of potassium and phosphorus would have interfered with the development of the plants of that era. We are indebted to the physiological effects of aluminum for the prevention of such injury, so that we are

The greatest danger in your meals today

The body has two constant needs which must be met by our daily diet—the need to build up body tissues and help eliminate waste matter

A GREAT nutrition expert says we are in danger because we eat so many artificial foods—use too many of the things which are convenient under modern conditions but which have been robbed of valuable properties in manufacture. Or perhaps in preparing foods for cooking at home we remove much that is healthful. Many even of our natural foods are incomplete and do not give us the food factors we need.

One familiar food, however, stands out above all the others as the richest known source of water-soluble vitamin—yeast. Just the every day cake of Fleischmann's Yeast you buy from the grocer. With the addition of Fleischmann's Yeast to your daily diet you know you are getting what you need.

Fleischmann's Yeast has a truly remarkable effect on the whole digestive system. It contains not only vitamin but other vital food factors which help build up body tissues, protect against disease, and keep the intestines healthy.

How many have heard that laxatives never remove the cause of the trouble and yet never act on that knowledge? Begin now. Start eating Fleischmann's Yeast today—and gradually give up laxatives. Laxatives weaken the muscles of the

intestines but right eating strengthens them. That is why many men and women have already found relief from intestinal inactivity—even chronic cases. Take advantage of their experiences and free yourself from this widespread complaint.

For the vast numbers of people who suffer with indigestion Fleischmann's Yeast is a natural corrective. It is so digestible itself that it places no strain upon the weakened system. It helps the flow of bile and pancreatic juice. The addition of Fleischmann's Yeast to the diet makes it possible for you to get more nourishment from the other foods you eat. It keeps your appetite keen.

Almost everybody grows to like the distinctive flavor just as they grew to like olives or oysters. Many prefer the taste of the plain cake, nibbling it a little at a time. Others like to dissolve it in boiling water,

Primitive man easily secured the necessary food factors from his fresh meats and green leafy vegetables—modern diet too often lacks these elements.

cold water, milk, fruit-juices, coffee or cocoa. Still others like it spread on bread or crackers. It is very popular in malted milk drinks.

Get your 2 or 3 cakes today. Place a standing order with your grocer. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will supply you.

Send for free booklet, "The New Importance of Yeast in Diet." Use coupon, addressing THE FLEISCHMANN COMPANY, Dept. 1807, 701 Washington St., New York.

Free Trial  \$4 per Month

Last Appearance of This Oliver Offer

To all who have been planning to buy a typewriter, we make this special announcement—up to July 1st you can save \$45 on the famous \$100 Oliver, the price being \$55. After July 1st, the price will be \$55. Prompt action saves you the extra \$10.

Total Saving, \$45

This offer is made by the Oliver Typewriter Company itself. You get a brand new Standard Oliver, Model Nine, direct from the factory, not second-hand, not rebuilt. It is the identical Oliver, long priced at \$100. Over 950,000 have been sold to satisfied users the world over.

Send No Money

Just mail the coupon and we send you an Oliver for Five Days' Free Trial. If you want to buy it, pay \$3 after trial, then \$4 per month. If you don't want it, ship it back at our expense. By dealing direct with the factory, you save the usual selling cost. Sending the coupon does not obligate you to buy. We leave the decision to you, after the Oliver arrives.

Mail the Coupon NOW

Note that the coupon is valid only until midnight, June 30th. After that the price will be \$65. So act quickly. Mail the coupon now and get the Free Trial Oliver. You do not assume the slightest risk. The Oliver must sell itself.

Canadian Price, \$79

Warning

This offer expires at midnight, June 30th. Act quickly.

justified in drawing the conclusion that without aluminum we should to-day have no coal deposits. But we must bear in mind that the fabulous luxuriance of plant growth to which we owe our beds of coal occurred under extremely favorable conditions for vegetation, and also in the presence of strong radio-activity of both soil and air. We also have proved that the flora of the various geological periods in which the minerals were strongly radio-active, attained enormous dimensions; in contrast, for example, to the chalk formations which possess no radio-activity and which produce no coal deposits."

The author further observes that the flora of these carbonaceous periods, namely, cryptogams living in companionship with thread-fungi and bacteria, produced enormous quantities of carbon-dioxid gas through respiration. The disintegration of the organic substances resulted in the formation of large quantities of organic acids, and through these two factors the disintegration of rocks was facilitated, thus forming a suitable soil for plant nutrition.

ROLLER GEARING; A NEW DEVICE

IN a paper on "A New Found Gear," read before the Institution of Engineers and Shipbuilders in Scotland, Mr. W. Rus Darling described an interesting and novel design of gear which, like the mill-stream relative to the mill-wheel, adapts itself to almost any conceivable variation. We quote from *The Nautical Gazette* (New York, a reproduction of parts of this address from which it appears that the device is especially suited for marine work on account of its adaptability to varying conditions. Says the paper named above:

In the case of reduction gears for marine turbines several devices have been tried, or proposed, for imparting flexibility. In so elastic a structure as a ship, no land trials can adequately indicate the behavior of her machinery in heavy weather at sea. Even the most careful loading and trimming of cargo will leave the machinery in a different condition from that which prevails when running light. In a heavy sea there is a constant change of conditions, and it is not to be wondered at if heavily loaded gears wear more rapidly in heavy weather.

The requirements of a perfect gear are the following: strength, sufficient to insure safety; durability, unlimited; adaptability, to all possible variation of conditions; elasticity, sufficient to absorb unavoidable vibrations of other parts; noiselessness, approaching to silence; economy, both in cost of production and in power.

On looking over this list it was apparent that the third requirement would be most difficult to fulfil. It was concluded that the solution of the problem might be found in a pinion which would have no pitch or form of teeth except that imparted to it by the engaging wheel.

The old mill-wheel, with its continuous stream of water "gearing" into it, suggested possibilities. The mill-stream adapts itself to almost any conceivable variation. If the mill-stream could be rolled up into a

Corns

Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

circle of suitable diameter, and provided with a shaft and bearings, it would form a pinion of the required adaptability.

Imagine a paddle-steamer in a fixed position relative to the motion of the earth, and the wheels driven by the water revolving with the earth, and you have the idea of the mill-stream mounted on an axis.

The value of the oil film and its existence between the engaging teeth are apparently accepted by authorities on gearing; and it must be concluded, for the present at least, that the continuous film is impossible in practise; but there is an element which has not yet been considered. It is neither a fluid nor a solid, and yet possesses something of the nature of both. It is sometimes called a semi-fluid, and perhaps the only familiar form of it is to be found in balls. If a number of balls are poured into a vessel, they will find a common level; if run out on a table, they will behave much like water.

The less familiar form, perhaps, is found in rollers, and here is an element which can only flow in two opposite directions. It is, in fact, this limitation, which enables it to be harnessed in the form of an endless mill-stream within the compass of an ordinary pinion.

The density of the element may be varied, the writer goes on to say, by having more or less rollers in a given space, each roller being supported by all the others; their individual diameter does not materially affect their strength as a combination, which, in fact, forms one solid "fluid" tooth, equal in thickness to almost the circumference of the pinion. He continues:

It is at once apparent that each roller provides a line of contact with the engaging wheel-tooth, so that, instead of one line of contact per tooth, there is a number varying with the depth of gear mesh. Further, each roller has a film of oil over its entire length and circumference, therefore there is actually that continuous oil film which was previously thought absurd. Not only that, the metal-roller element upon which the film is built is almost as fluid as the oil itself.

It may be easily seen that a pinion of this construction is able to accommodate itself to any straight tooth in a wheel, and will continue to do so until the tooth is entirely worn away. It is, therefore, independent of the contour and thickness of the tooth. Also, the tooth may engage with it at any point of its circumference, and it is thus independent of pitch. These facts indicate the elimination of geometrically designed teeth as a necessity, and also, that irregularity of pitch and missing teeth will not interfere with smooth and continuous running. Other irregularities are provided for in the fact that the rollers are free to incline in either direction across the face. The alignment may be faulty, parts may expand or contract, the foundations may warp and twist, but the little rollers will cling to the teeth of the wheel till it is ready for the scrap-heap.

Owing to the adaptable nature of the pinion tooth, clearances are unnecessary, and the periphery of the pinion may be fitted right down to the root of the wheel-tooth, thus taking advantage of all the available surface contact. Pinions of the new type may be moved into gear instantaneously or gradually while revolving at any speed. This is done regularly at present at a speed of 2,000 revolutions per minute without shock or danger of any kind. This fact appears to indicate adaptability, elasticity and efficiency.

\$1,000⁰⁰ in Prizes

Build Words from the Phrase, "Use Elam's Irish Lawn When You Write" and Try for \$500.00 and Other Cash Prizes.

TO the thirty persons sending in the largest list of English words built from letters in the above phrase and written on Elam's Irish Lawn in accordance with the simple rules, we will pay the cash prizes shown in \$1,000.00 Prize List No. 1. But you may use any other paper you choose and be eligible for the prizes in \$150.00 Prize List No. 2. Anyone may compete for either list except persons connected with our organization, and in both cases the money will be earned during just a little spare time. Read the rules carefully.

Carried by most good stationers, druggists and department stores. If unable to obtain it locally, send us 50 cents for full sized box containing 24 sheets of paper and 24 envelopes to match. Specify color: White, Gray, Buff, Blue, Pink or Lavender. If you write your words on Elam's Irish Lawn, your chance to win one of the big prizes is as good as that of anyone and in addition, you will have learned how to obtain better stationery value than you ever had before, which is the real object of this contest

Contest Rules:

1. Only words found in Webster's dictionary will be counted. Don't send foreign, hyphenated or compound words. Words of same spelling can be used only once, even though they express different meanings.
2. Letters may be used in each word only as often as they appear in the Contest Phrase. For example, S may be used three times, but M only once.
3. Contest closes noon, July 31, 1922.
4. Use either singular or plural, but where plural is used, singular cannot be counted also, and vice versa.
5. The list showing the largest number of English words will be awarded first prize; the next largest, second prize, etc.
6. Answers should be written on one side of the paper only and words numbered 1, 2, 3, 4, etc. Write your name and address on each sheet.
7. In event of ties, full amount of the prize tied for will be paid each tying contestant.
8. All lists will receive the same consideration by impartial judges whether written on Elam's Irish Lawn or not.
9. The decision of the judges will be final and awards will be made and checks mailed to winners as soon as possible after close of contest.

INVESTMENTS AND FINANCE

OUR FOREIGN TRADE EXCEEDING PRE-WAR FIGURES

HERBERT HOOVER, Secretary of Commerce, takes the first page of a recent issue of *Commerce Reports* to correct "popular misapprehension and conflicting opinion" about the state of our foreign trade. To really know where we stand, says Mr. Hoover, we must compare last year's trade with that of a pre-war year. The Secretary presents such a comparison in a table reprinted below, and he comments:

The tremendous increase in our foreign trade during the war could not have taken place under normal conditions, and therefore should not be taken as a starting-point in an estimate of our present situation. As a matter of fact, when we consider the diminished purchasing capacity of the civilized world, caused by the war, we are not sure whether we are even justified in adding to our pre-war level the average pre-war normal increase to cover the period since the outbreak of the war. While this reservation may seem superfluous, there is reason to believe that it has not been sufficiently emphasized in some of the popular discussions of our foreign trade.

On the basis of a pre-war comparison we find, as will be seen from the following table, compiled from official figures, that the foreign trade of the United States is nearer normal than the trade of the United Kingdom, France, or Germany, which are our principal competitors. While the figures in the table are only approximately comparable, owing to the fluctuations in price level, it is believed that they are sufficiently correct to indicate the relative advantage of the United States in foreign trade.

If the trade of various countries were analyzed by commodities instead of values they would still show somewhat the same proportion. In other words, the trade of the United States, even in times of great depression, is higher than our pre-war level. During the last few months there has been a distinct revival in trade from the low point, and I am confident that we have little reason to accept the pessimistic view of our foreign trade future taken by many students of the question.

Our trade has shifted somewhat as to commodities owing to the changed economic currents due to the war, but when all is said and done the remarkable fact stands out that we have held on.

To the National Bank of Commerce (New York) it seems that the export outlook is particularly encouraging, more

especially as regards manufactured goods. As the bank says in a recent publication:

Taken in connection with broadening inquiries and an improved export outlook as reported by the largest iron and steel producers, the evidence seems to be that the American manufacturers in these lines can successfully compete in the world's markets and that those markets are reviving. Export results are encouraging in other directions. Exports of automobiles, trucks and tractors are increasing. There is a broadening inquiry for cotton textiles in those countries to which the United States has normally exported. Exports of those specialties for which the United States has long been noted are all being well maintained, with an outlook for an increasing volume.

Also emphasizing the better export outlook in manufactures as evidence of increased industrial activity here, another New York Bank, the National City, in its *Trade Record*, goes on to point out that the materials used for manufacture showed a striking gain in recent months, "the more striking because of the fact that the prices at which these materials are being imported are now far below those of a year ago and therefore the increase in total values means a much larger increase in quantities than the simple value figures indicate." As for the actual exports of manufactures there was a larger total in March in value than any month since April, 1921, and "not only is the March record of manufactures exported the biggest since April of last year, but the share which manufactures form of the total exports of the country is larger than in any month since April, 1921." The recent figures on exports of manufactures suggest to the writer for *The Trade Record* "that the total in the fiscal year 1922, which ends with June, will be about 50 per cent. greater in value than those of the fiscal year immediately preceding the war, despite the fact that world purchasing power is 'down' and prices at which manufactures are now passing out of the country materially less than a year ago."

Last March, the Harvard Economic Service reports, our export totaled \$332,000,000, the highest since October, 1921, while our total imports were \$258,000,000, the greatest since December, 1920. Indices based on the physical volume of

GROWTH

IN CANADA

IT is computed that there are 550 "Branch" Factories of U.S. firms in Canada. This tremendous investment has been brought about by a desire on the part of the parent companies to obtain a greater share of Canadian local trade, and the foreign business which is economically and expeditiously done from Canada to other parts of the British Empire and beyond.

It is interesting to trace the growth of many of these industries. In some cases, their first premises in Canada consisted of a manufacturing "loft" of limited capacity. The next step was the building or acquisition of a factory with greatly increased space and facilities. Today you will find that many of these industries have so expanded that their present plant consists of a group of buildings of imposing size, and their trade ramifications extend from coast to coast in Canada and to many foreign countries.

In adapting their trading customs to Canadian conditions, the most important of these firms found that the people of Canada are reached and sold through the medium of advertising in the Daily Newspapers of Canada. This refers not only to "city people" but to those living under widely varying conditions. Figures prove that the metropolitan papers have a large percentage of circulation in what might be termed "rural" centres, embracing farm and prairie as well as those districts devoted to lumbering, fishing, mining and the basic industries on which the country largely depends.

The road to Canadian pockets lies through the columns of Canadian Daily Newspapers. As

evidence of the truth of this statement you will find there, year in and year out, advertisements of leading Canadian firms, hundreds of U. S. firms, and many British Houses, resident and non-resident in Canada.

Advertising in the Daily Newspapers of Canada has aided and hastened the transition from a "loft" to a "plant" for many U. S. Branch factories in Canada. If you or your house are interested in the rich and growing market which Canada offers, you cannot longer afford to be unrepresented in the columns of these newspapers.

Any newspaper (or its representative in New York or Chicago) in the list below will be pleased to receive and answer fully, your enquiries regarding the actual and potential market for your goods among its readers.

imports show that they reached their lowest point in the third quarter of last year, when they were 28 per cent. below the 1920 average. "The fact that exports also recovered strongly in March," we read in this statement, "makes it probable that the low point in exports has been passed," and there is said to be little doubt, from recent statistics, "that our export trade has now joined the imports in a definite up-turn."

If the "favorable balance" of export over import trade shown by figures for the spring months is maintained for the fiscal year it will, as a writer for the *New York Times* market page figures it, "be about \$1,178,000,000 as against the \$652,875,915 of the fiscal year 1913."

WHY SAVINGS HAVE KEPT UP DURING THE HARD TIMES

MANY people have expressed surprise at the failure of savings-banks accounts to show a decrease during the past year in spite of the unemployment. *The Survey* (New York) asks Mr. Leonard P. Ayres, Vice-President of the Cleveland Trust Company, for an explanation. Mr. Ayres makes the statement in reply that as a matter of fact savings deposits do not generally decrease in periods of business depression unless the period is either very serious, or very long, or both. He proceeds, in his letter to *The Survey*:

Since the Civil War there have been seven serious financial depressions in this country. In that from 1873 to 1879, savings deposits did not begin to decrease until after the depression had been under way for four years. Their worst decrease was in 1879, which was the year of recovery. In the depression from 1883 to 1886 savings deposits increased continuously. In that from 1893 to 1896, there was a slight falling off in 1894, and a continued increase afterwards. In the depression of 1903 to 1904, savings deposits increased. In that of 1907 to 1908, there was a slight decrease in 1908. In that of 1914 to 1915, there was continued increase.

Under the circumstances it does not seem remarkable that there has been no great falling off this time.

Most of the explanation seems to lie in the fact that when industries slow down, and pay rolls are reduced, and prices fall there is a great amount of money released that had been used in commerce and industry. This money finds its way into the banks and increases their deposits, and enough of it finds its way into savings deposits to keep them up during the period of depression.

In reply to a query as to the effect of prohibition, Mr. Ayres sets down his own "personal opinion that we have come through this depression better than we should have under the old conditions before prohibition. I do not believe, however, that this can be demonstrated from the figures of bank deposits."

"It Was a Long Time Before I Learned How to Invest"

"It is because so many people really want to speculate instead of to invest that promoters and swindlers find it so easy to sell their worthless stuff by promising high returns." This is a quotation from an investment story from real life, called "I Don't Guess—I Invest." It is full of interest and profit to every one who has ever been in doubt whether a certain investment was good or not. If you have ever been in doubt, and would like to make an investment where you are sure of getting 8%, write for a free copy of the story today.

INVESTMENTS OF FOREIGN MONEY RAISING THE VALUE OF THE FRANC

LESS spectacular than the rise of sterling, the French franc's gradual appreciation has been almost as important a feature of the foreign exchange market. In January of last year the franc touched its low point, being worth a fraction less than six cents as compared with the par value of 191½. It has since been slowly rising, with occasional reactions, until in recent weeks it has been quoted at something better than nine cents. The Genoa Conference and the various discussions over the reparations problems seem to have had little effect. The improvement in foreign trade in 1921 and the early months of this year has, however, according to *The Federal Reserve Bulletin*, been an active factor.

But even more important, in the opinion of this official financial authority, has been the effect of recent investments of foreign capital in France. During the fortnight before the announcement of reduction of the interest rate on National Defense Bills at the end of February, a great deal of capital seeking short-term investment was attracted to the French market because of the larger income accruing from French than from other governmental short-term obligations. And then, "in addition to these investments in short-term bills, there has been a considerable investment of English and American funds in long-termed French securities since the first of the year." Three loans were placed on the London market during February and March, one for £3,000,000 by the Department of the Seine, one for £5,000,000 by the Paris-Lyon-Mediterranean Railway Company, and one for £5,000,000 by the Nord Railway. The railway bonds are in both cases "the direct obligation of the company they represent and of the joint fund of all the French railway systems established by a convention of July 28, 1921."

Something like 720,000,000 francs has been invested by Americans in France in the shape of five French loans of varying importance which have been placed on the New York market since January 23:

The first was a loan of the Department of the Seine for \$25,000,000, which was sold at 90½, bearing interest at 7 per cent., and maturing in twenty years. The second French loan floated here this year was part of a foreign series of 1920 issued by the Midi Railway Co. This loan, in contrast to the other French external loans floated in the United States in 1922, is redeemable in francs. The bonds offered were worth 25,000,000 francs and were sold on the basis of \$79 to a 1,000-franc bond. They are redeemable at par by annual drawings, not later than 1960. The Paris-Lyon-Mediterranean Co., in addition to its British loan, placed bonds to the value of \$30,000,000 on the New York market in February. These bonds bear 6 per cent. interest and were sold at 83, with accrued interest from February 15, 1922, to date of delivery. They are due February 15, 1958, and are of the same type as the British bonds. Both of these issues of railway

INVESTMENTS AND FINANCE Continued

bonds are secured in the same fashion as the French railway bonds offered on the British market.

The only French industrial issue offered in New York so far this year appeared in the form of bonds of the Framerican Industrial Development Corporation. This company was organized in 1917 for the purpose of "facilitating the business in this country of the French company of Schneider et Cie." The latter company specializes in iron and steel products, and owns the Creusot Works, one of the most important plants in France for the manufacture of electrical machinery, locomotives engines, and steam turbines. The \$10,000,000 loan recently placed here was in the form of 7½ per cent. 20-year bonds, and sold at 99, to yield approximately 7.60 per cent.

The most recent French loan offered in New York was announced March 20. It is one of the series of reconstruction loans authorized by the French Government and is issued by the city of Soissons for \$6,000,000 at 6 per cent. It is non-callable in whole or part and will be redeemed in 1936. The bonds were sold at 85½ and interest, to yield about 7.65. The French Government has arranged to pay the city more than 8,000,000 francs per annum for the service of this loan. . . . All these French loans have been very favorably received, and at the rate of 9 cents to the franc they have probably meant the transfer of about 720,000,000 francs to French balances in this country, if not to France, in the last two months.

WHAT COMES OF BECOMING A CREDITOR NATION

ONE of the most interesting investment problems that has made its appearance in the New York market for a long time past "grows out of the heavy flotation of foreign bonds that have been made here during the past few months," notes *The Magazine of Wall Street*, which goes on to state this problem briefly as follows:

It is estimated that capital is now being transferred to foreign countries at about the rate of \$1,200,000,000 per annum as a result of these flotations, and the question has arisen whether the effect will not be to cause the development of an unfavorable balance of trade unless the proceeds of the loans are uniformly spent here—as, indeed, the State Department has requested that they shall be.

On the whole, the principal industrial interests of the United States are strongly of the opinion that the proceeds of the loans should be expended in this country, while a good many bankers, and especially the private banking houses, are taking the view that there is no good ground for imposing any such restriction upon the conditions under which flotations occur. As to the latter point, it is noted that not a few of the foreign countries which are borrowing here would prefer, if left free to do so, to place their funds in countries where they could buy more cheaply, disposing of their dollars here at good premium and converting them into sterling or other exchange with corresponding profit to themselves.

Digesting the Foreigner

America's big problem. Congress has wrestled with it for generations. The United States Immigration Commission spent four years studying the effect of immigration on American civilization and Jeremiah W. Jenks, Ph.D., LL.D., Research Professor of Government and Public Administration, New York University, and W. Jett Lauck, Director of the Bureau of Applied Economics, Washington, who were officially associated with the Commission, have given the gist of its 42-volume report in their wonderfully comprehensive and interesting book—

THE IMMIGRATION PROBLEM

(New and Revised Edition)

After passing through four editions, the book is now coming from the press in a fifth edition, revised, enlarged, and strictly up-to-date, by Rufus D. Smith, M.A., Associate Professor of Public Economy, New York University. The book now contains immigration laws and regulations up to May, 1921, and all available new data and statistics, based on the 1920 census. Prof. Smith has added three important chapters—Immigration Problems of Other Countries, The Race Problem in the Pacific, and Present and Future Restrictions. The book is a most admirable survey of the immigration situation, and the recommendations of its authors will go far toward solving the problem.

Cloth, 8vo, 682 pages

Funk & Wagnalls Company, Publishers, 354-360 Fourth Avenue, New York

The Truth About The Drug Menace

The Drug Octopus is rapidly reaching out in all directions, in every stratum of society, from the palace on Fifth Avenue or Beacon Hill to the slums of State Street or the Barbary Coast. Dr. Royal S. Copeland, Health Commissioner of the City of New York, said: "It is safe to say that in all New York one person in thirty is a victim. During one month one drug store sold 500 ounces of cocaine, enough to send 2,500 people to hell." The entire appalling situation is discussed for you authoritatively, clearly, forcefully and interestingly in a remarkable book entitled

HABITS THAT HANDICAP

By Charles B. Towns

The author is one of the most successful fighters in the United States against this devastating blight of drugs on our civilization. Dr. Richard C. Cabot, M.D., himself an eminent physician, says of Mr. Towns, the author: "I do not hesitate to say that he knows more about the alleviation and cure of drug addictions than any doctor that I have ever seen."

"Habits That Handicap" contains amazing facts and figures, facts of which physicians, social workers, clergymen, nurses, educators, heads of families dare not remain ignorant if they have at heart the betterment of the race.

Cloth, 223 pages. Size 7½ in. high by 9 in. wide

Just Published

The Fourth Revised Edition of

HAY FEVER

Its Prevention and Cure

By

Wm. C. Hollopeter, M.D.

Since the last edition of this book was published six years ago great advance has been made. We know that the emanations of vegetable matter actually cause hay fever, that different parts of the United States produce different pollen, so the treatment of hay fever in one portion will be different from the treatment in another. The West, North, and East, will call for a different immunizing process than that of the middle states, yet any one can prevent his annual suffering by selecting the proper anaphylactic reaction from inhaled atmospheric pollens. Hay fever is now successfully treated by immunizing the patient in advance of the attack, by the use of the same pollen that creates his trouble. The 4th edition now offered has been completely revised and enlarged and gives the results of the most modern and efficacious treatments.

Commence Treatment Now

Dr. Hollopeter is a well-known specialist who has had unusual success and any one who suffers from rose colds, sneezing spasms, asthma, or hay fever, should get this book immediately and carefully consider the immunizing treatment which, among other successful methods, is so carefully outlined.

8vo, cloth, 424 pages, illustrated, \$2.00 net; by mail, \$2.12

CURRENT EVENTS

FOREIGN

May 23.—The Ulster Government moves against the murder campaign by the arrest and internment of 300 Sinn Féin leaders believed to be responsible for three-score murders in Belfast in three days.

May 24.—A commercial treaty dealing with commercial relations, communications and transportation between the two countries and with concessions which Russia is to make for the exploitation of Russian resources is signed between Russia and Italy.

May 25.—Premier Lloyd George receives a vote of confidence when the House of Commons rejects by a vote of 235 to 26 a resolution criticizing his Genoa policy.

The day's casualties in Belfast are reported to be six dead and 27 wounded.

May 26.—The committee of international bankers meeting at Paris serves notice on Germany that further consideration of the \$1,000,000,000 loan to the German Government is out of the question until Germany accepts in full the ultimatum of the Reparations Commission, which expires May 31, and gives adequate guaranties that the inflation of Germany's currency will be immediately stopt.

May 27.—The Irish Free State leaders inform Premier Lloyd George that the peace pact with the Republicans will not nullify the treaty with England.

The Vatican protests to the League of Nations against the British mandate over Palestine on the ground that the mandate threatens religious equality by giving the Zionists a privileged position.

May 28.—A new revolutionary movement against the Obregon Government in Mexico is reported to have spread over seven states and to be led by General Felix Diaz.

May 29.—Germany accepts Allied control of her financial affairs in exchange for a moratorium of her 1922 war bill instalments, and promises to give every facility to the Allied Committee on Guaranties, which will act as inspector for the Reparations Commission.

Horatio Bottomley, former editor of *John Bull*, and a member of Parliament, and self-styled friend of the poor people, is found guilty of swindling, and sentenced to seven years' penal servitude.

The Austrian crown falls to 7,000 to the dollar, the lowest level yet reached.

Prime Minister King announces in the Canadian House of Commons that the Dominion Government does not consider the present an opportune time for negotiation of the treaty with the United States on the St. Lawrence-Great Lakes Canal project.

May 30.—Irish Republican forces seize a strip of territory in Fermanagh County, Ulster, and clashes, marked by the use of armored cars and machine-guns, occur between Ulster and Southern Irish forces.

Memorial Day for American dead is observed in both France and Great Britain.

Contradictory reports are made concerning the threatened revolution in Mexico,

*"All right friend—
no harm done!"*

(Overheard in New Brunswick, N. J., between owners of cars No. 560-541 New York and No. 101-000 Conn.)

"All right, friend, no harm done."

"Some collision, too!"

"I'll say it was. No way of avoiding it, either."

"Didn't bother me a bit when I saw you had on Weed Bumpers, too."

"They certainly saved us from a bad smash-up,—my gas-tank and rear fenders, your front fenders, headlights, radiator—maybe worse."

When you have on the "deep-chested" Weed Bumpers you know you are safe in a collision. They absorb the heaviest blows.

With Weed Bumpers a collision is merely a harmless incident instead of a costly accident. They pay for themselves many times over, to say nothing about keeping a car going. And they save you good money on your insurance in the first place.

Nothing to compare with the Weed Spring-Bar Bumper design. It is scientifically right. Did you read that "Up Against A Stone Wall" test? That super-test proved and sold the Weed Bumper to thousands of motorists.

As for looks, there is nothing that sets off a car so handsomely. The Weed Bumper adds distinction and beauty to any car.

but the situation is said to be disquieting.

The German Reichstag ratifies the Upper Silesian boundary agreement by which Poland obtains control of that part of Silesia allotted to it by the League of Nations.

DOMESTIC

May 24.—Railroad freight rates will be reduced on July 1 by amounts equal to 10 per cent. of their present levels, under a decision of the Interstate Commerce Commission, and 5.75 per cent. will be deemed a reasonable annual return which carriers will be entitled to earn from their actual capital investment.

The American Government has notified Canada, it is stated, that it wishes to open negotiations for the construction of the St. Lawrence-Great Lakes ship canal as soon as possible.

May 25.—The Armament Limitation Conference cost the American Government \$252,002, minus an estimated balance of \$350.92, according to a statement sent by the President to the Senate.

The hard-coal miners reject the demand of the anthracite operators for a 21 per cent. wage reduction, and in turn insist upon their demand for a 20 per cent. wage increase.

May 26.—After the tenth lynching in twenty days, State rangers are sent to guard the jail in Waco, Texas, where other negroes are confined.

Eight workmen are killed and three are injured when 3,000 pounds of dynamite explode in a chemical factory at Wylside, Pennsylvania.

Return of all money or other property held by the Alien Property Custodian and the Treasurer of the United States and belonging to Austrians and Germans now resident in the United States is provided for in a joint resolution introduced by Representative Sabath, of Illinois.

May 27.—William Blizzard, charged with treason in connection with the armed march of miners into Logan County, West Virginia, last fall, is acquitted at Charles Town, West Virginia.

President Harding approves the recommendation of the Post-office Department for the establishment of a strict eight-hour basis for postal employees.

The accumulated coal reserves of the country are rapidly diminishing, and a national coal famine is impending, according to a statement issued by John L. Lewis, President of the United Mine Workers of America.

May 28.—Nearly \$50,000,000 is cut from the annual payroll of the country's railroads, effective July 1, by the decision of the United States Railroad Labor Board directing a reduction of 13.2 per cent. in the pay of approximately 400,000 maintenance of way employees.

May 30.—The Lincoln Memorial in Washington, which took ten years in building, is dedicated by President Harding, fifty-seven years after the tragedy at Ford's Theater.

Strike warnings involving 1,070,000 railroad men are served in Chicago, Detroit, and Houston, Texas, as a result of the recent wage-cut ordered by the Railroad Labor Board.

Learn a New Language Know a New World

Read, write, and converse in French, Spanish, or Italian and you enter a new world of business, personal and social delights, benefits and opportunities! Sparkling French novels, vivid, thrilling, Spanish and Italian masterpieces—all are literally "open books" to you *only* when you read them in the language of the author, for their full charm and subtlety of expression cannot be translated.

The eyes of business America are turned to foreign markets. Our export and import firms **MUST** have executives, salesmen, correspondents, office-workers of all types, who know the language of the people with whom they are dealing or are to deal. Whatever your interest in these rapidly expanding factors of trade may be, whether owner or employee, opportunities galore for personal profit are open to you.

The prestige which the knowledge of French, Spanish, or Italian carries with it in social circles is too well-known to require comment.

When you visit the great battlefields of Belgium, France or Italy—when you journey to Cuba or South America—complete enjoyment of the trip and the full benefits of it are immeasurably impaired unless you understand and speak the language of the land.

Look and Listen At Your Leisure

Thousands have quickly and easily learned French, Spanish, and Italian by the remarkable Language Phone Method with Rosenthal's Practical Linguistry. **YOU CAN TOO.** A few moments a day for a few weeks and a new language is yours!

The Language Phone Method is simplicity itself. You learn at your leisure, in the comfort of your own home. Merely put a Rosenthal Language Phone Record on your phonograph (any make) and listen. You hear the cultured voice of a native professor. His pronunciation and enunciation are perfect. He speaks of every-day matters—asks and answers every-day questions.

As you listen, you read aloud from the book the same phrases you hear spoken. Thus, from the very beginning, you speak and understand the language you take up. Soon you associate the words and sentences with the actual things they describe and you *think* in your new language.

No rules to learn, no distant classroom to go to, no waiting teacher to consider, yet the Language Phone Method assures you of perfect accent and grammar in a few weeks!

Language Phone Method

With Rosenthal's Practical Linguistry

The Rosenthal Method has been praised, endorsed and used by teachers of languages in such famous Universities as Columbia, Harvard, Yale, Princeton, Cornell, Johns Hopkins, New York, Boston, Virginia, Pennsylvania, Michigan, Brown, Stevens Institute of Technology, College of St. Francis Xavier, St. Joseph's Seminary.

Whatever your experience with other methods of learning a language, do not fail to investigate this which so simply, quickly, and forcefully gives you mastery of French, Spanish, and Italian.

FREE A 64-PAGE BOOK That Tells You

How to Increase Your Income, through a knowledge of a foreign language, whether you are an employee, young or old, a professional man or woman, a practitioner of any of the arts or sciences—whoever, whatever, and wherever you are. How to Acquire Conversational Fluency in a Foreign Tongue Quickly—and devote only ten minutes, three times a day, to study. How familiarity with even one foreign language increases Your Prestige—in the drawing-room, the club, the office; Widens Your Circle of Acquaintances—social and commercial; Multiplies the Pleasures of Travel and Reading; Broadens Your Intellectual Horizon.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"D. W. McML.," Chicago, Ill.—"Please give me the translation of the following Latin phrase. 'Ubi libertas, ibi patria.' This appears on an old Irish crest."

The phrase means, "Where liberty is, there is my country."

"J. R. B.," New York, N. Y.—"(1) Is there such a word as *religiosity* or *religiousity*? (2) What is the correct pronunciation of the word *dominie*?"

(1) The word is *religiosity* and means—"1. Religiousness; also, susceptibility to the mystical elements of religion; especially, religious feeling apart from its duties; pious sentimentality. 2. (Rare.) Religious service." (2) The word *dominie* is pronounced *dom'i-ni-o* as in *not*, *i's* as in *habit*; or *do'mi-ni-o* as in *go*, *i's* as in *habit*.

"W. C. D.," Searcy, Ark.—"(1) I contend that the names of the seasons—*Spring*, *Summer*, *Autumn*, *Winter*—should be capitalized. A printer says not. Who is right? (2) What is the rule for capitalizing such names as *Washington County*, *White River*, *State of New York*? (3) In 'He is a citizen of this *State*,' should *state* be capitalized? (4) Why are not *Sun* and *Moon* capitalized, being proper names, as are the names of the stars?"

(1) and (4) The seasons of the year, and the words *earth*, *sun*, and *moon*, being regarded as common nouns, are not written with initial capital letters. The names of planets and stars should be written with initial capital letters, as they stand for personification of certain mythical deities. (2) The rule is—"Begin with a capital the words *State*, *Territory*, *County*, *Colony*, *Commonwealth*, etc., preceding or following a specific name; as, the *County of Clinton*, the *State of Iowa*, *Arizona Territory*, *Plymouth Colony*, the *Commonwealth of Kentucky*." Also, "Begin with a capital each word which forms part of a specific name, like *Mississippi Valley*, the *Gulf Stream*, *Cape Cod Bay*. When the name of the object is a general term, not specifically belonging to the thing mentioned, it may begin with a small letter; as, the *Mississippi river*; the *Congo basin*; the *Catskill mountains*. The *Great Basin*, the *Rocky Mountains*, or *Long Island Sound* requires a capital for each word, because each word is used specifically and forms part of the specific appellation." (3) In the sentence you submit, *State* should be written with an initial capital letter—"He is a citizen of this *State*."

"F. G. T.," Stockton, Calif.—"Please tell me whether the expression 'off of' is ever permissible. To the ear 'off of' sounds most offensive, and I am anxious to learn whether usage has ever made it permissible."

The preposition *off*, when noting origin and used in the sense of *from*, is frequently followed most ungrammatically by *of*. No well-educated person would say, "I got these eggs *off of* Farmer Jones," nor would one say, "Buy a steak *off of* the butcher" but "of" or "from" him. *Off* should not be used of a person, where *from* would suffice. You take a book *from*, not *off*, your friend, who may take it *off* a shelf. You do not even, in correct speech, take a contagious disease *off* him, as tho it were something visible and tangible, and were bodily removed from his person.

"N. E. M.," Minneapolis, Minn.—"Could you help me to find the origin of the quotation, 'All roads lead to Rome'?"

This is an old English proverb rendered also in French, "Tout chemin mène à Rome," but the Lexicographer has no source of its origin. Sallust wrote, "Omnia venalia Roma," "All things are salable in Rome." Juvenal in his *Satires* 3, 183, wrote: "Omnia Romæ cum pretio," "All things have their price at Rome." Cervantes in "Don Quixote" wrote: "Y á Roma por todo," "To Rome for everything."

"H. F. P.," Cleveland, O.—"How is *Raleigh* (N. C.) pronounced?"

Ro'li-o as in *or*, *i* as in *habit*.

"T. B. R.," New York, N. Y.—The word *beginning* may be separated as follows—*be-gin-ning*.

Cleveland-Buffalo Seeandbee Daily \$5.50

Get the Job that Pays Best

THERE are 1400 distinct vocations open to you—362 professions, arts, and sciences; 344 commercial enterprises and businesses; 700 trades and skilled vocations. Find out which you are most interested in, and for which you have the greatest natural ability, and get into that line.

Employers to-day are quicker to engage men and women who are really interested in their work, because they know such ones accomplish most. This reacts to your advantage, for better pay goes with better work. Besides, you are not merely "holding down a job," but are enjoying your work as you do it. This enables you to forge ahead, as the mere "grind" never can.

The Best Paying Job

The job you are most interested in and best fitted for, pays the best—not only in money, but in contentment and advancement. Also, it is easier to get; and offers the greatest opportunity for rapid development and permanent success.

The important thing is to find out, without loss of time, what you are best fitted for, both by inclination and ability. This is now easy through the wonderful new book, "HOW TO CHOOSE THE RIGHT VOCATION," by Holmes W. Merton, the eminent Vocational Counselor.

1400 Vocations Open to You

This remarkable volume describes the requirements of over 1400 vocations. From these detailed descriptions, you can judge which ones you would be most interested in to make your life-work. The author shows you how to discover whether or not your present work is the right work; how to examine yourself and

This book is eminently practical. Here is concentrated the experience of many years in successfully guiding thousands of men and women in the choice of their life-work. It is vitally necessary to every man or woman who wants the right job—to every parent who wants his son or daughter to find the right place in his or her life-work—to every employer who wants to know how to pick the right man for every place in his business. The *Atlanta Constitution* truly says: "By following the instructions given by Mr. Merton, young men and women may be saved years of wasted effort and disappointment."

Cloth Bound; 312 pages, \$1.50 net; postpaid, \$1.62

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York, N. Y.

analyze your ability, to ascertain just what work you are best fitted for; how to bring into play your greatest powers and make your work yield the most satisfaction and profit.

Thorough Self-Examination

In addition, there are 720 self-testing questions. When you answer these frankly, you will get a wonderfully clear understanding of yourself, your abilities, your inclinations, and the prospects offered you by different vocations.

Help Your Son or Daughter to Choose Wisely

When the great decision must be made as to what line of work your boy and girl will enter, don't let them make the mistake of choosing the work that is not the best work for them, because their whole future is likely to be ruined in consequence. This wonderful book will render service of incalculable value in showing them how to choose their vocation wisely and insure success and satisfaction in their life-work.

Employers—Get the Right Men

The executive who knows how to pick the kind of workers that will fit naturally into his business, will save thousands of dollars that are lost when the wrong men are employed and allowed to lower the efficiency of the staff. This book will help you find the right man for every position in your business.

THE • SPICE • OF • LIFE

But Rich Humor Gets By.—It's easier for a rich man to go through a camel's eye than for a paragrapher to put over one *The Digest* will quote.—*Minnesota Star*.

In Spite of All.—The oldest doctor in the world has just celebrated his hundredth birthday. His ease is regarded as a triumph for Nature over medical knowledge.—*Punch (London)*.

With Reverse English.—MISS GREEN—"I know he's rich, but isn't he too old to be considered eligible?"

MRS. WYSE—"My dear, he's too eligible to be considered old."—*Boston Transcript*.

Italy Has the Same Problem.—NEW SERVANT—"So it is understood. I have my theater, my tea, my receiving day."

MISTRESS—"Will it be necessary for us to teach you to play the piano?"—*Il Numero (Turin)*.

Why the Motorist Wins.—"More persons are killed by motor cars than by airplanes," says a technical journal. It is only fair to point out that motorists have had much more experience and practise than aviators.—*Punch (London)*.

Cannibal Etiquette.—According to a returned traveler, if a cannibal says "Wrrgh," it means that he does not want to eat you at once. There seems room for a manual of polite conversation that would enable the courteous traveler to respond: "Then would you like me cold for supper?"—*London Opinion*.

ROMANCE AND ADS.

The average magazine story these days starts off with half a dozen paragraphs draped around an illustration, and then jumps—like the quick brown fox—into the advertising section, where it trickles along between canned milk and floor wax.

Dozing over a short story the other evening, while it cavorted deviously through the advertising pages, we arrived at the following bizarre combination:

The path wound in and out through the meadow, not far distant . . . from contented cows. On a fence-rail near by a bobwhite perched and sang . . . your druggist carries it.

The summer day was ideal . . . for sprains and stiff joints; the rays of the descending sun bathed the landscape . . . fresh every hour. Half-way down the path they came to a shady nook . . . recommended by a generation of users.

She was conscious of his manly form . . . built of white pine, and reinforced at the corners. Her companion was, she thought to herself, a veritable prince . . . one of the fifty-seven varieties.

As for him, he could not take his adoring eyes off of her . . . the world's most perfect talking-machine.

He felt an irresistible impulse to tell her how much he loved her . . . combining the purest ingredients. He longed to pour out his passion and . . . sweeten it with Domino. He stroked her hair . . . so different from ordinary macaroni, while she nestled close to his side ready to . . . refuse substitutes.

"Dearest," he murmured at last . . . looking like new. "Dearest, this is the moment I have longed for . . . because of its pleasing flavor."

Another Recommendation.—Golf not only improves your general health, but enables you to understand the jokes in the comic weeklies.—*Minnesota Star*.

Fashion Note.—The newest complexions are of a deathly pallor, declares an observant chronicler of society ways. So the rose-cheeked girl will now be more than ever "outside the pale."—*Eve*.

A Long Drop.—An aerial wedding took place the other day 3,000 feet over New York. Lucky that the bride did not change her mind at the last minute and throw her fiancé over.—*London Opinion*.

The Search Continued.—"I saw in the papers that you were looking for a new cashier. I believe you got one last week?"

"Yes. And now I am looking for him!"—*Strix, Stockholm*.

"Soused" When Two Words Run Together.—The singular (woman) is commonly preferred, as "The Woman's (not Women's) Christian Temperance Union." Woman, soused, is generic, denoting all womankind, just as man is generic in the sentence, "Man is mortal."—*Helpful Hints in English*.

Animated Laundry.—Lost—Two pereale shirts on Oliver Street, between Lovett and Seminary, on their way to be laundered. Finder please return to Rank's grocery store.—*A Classified Ad in the Charlotte Tribune*.

Going in Strong.—Because of the insistence of many of my friends I have consented to be a candidate for the legislature. My aim is to steer clear of fractional differences and espouse the cause of X—County and the State of North Carolina.—*Political Notice in the Danville Register*.

A Glean of Hope.—DEDBROKE (roused by his wife)—"What's that you say? A burglar?"

MRS. DEBROKE—"Yes. Fancy a burglar calling on us!"

DEBROKE—"Let him climb in; then I'll give a yell and it may make him drop something he has stolen elsewhere."—*Boston Transcript*.

Fortissimo.—Myron had learned to sing several little songs, and his grandpa always played the piano while he sang them.

One evening we had company, and after a while he was asked to sing. Grandpa played as softly as he could so the child's voice would be heard above the piano.

They got in the middle of the song, when the youngster stopt singing and yelled out, "Hey, grandpa, give her more gas!"—*Western Christian Advocate (Cincinnati)*.

THE EX-POLICEMAN WHO TURNED FARMER.

—Leo Cheney, in *The Passing Show (London)*.

She did not answer at once. Her thoughts seemed far away . . . at the nearest grocery.

He took her hand in his, and held her close . . . allowing the skin to breathe.

"Will you be mine?" he questioned in a tone . . . recommended by boards of health everywhere.

"You want me for your wife?" she asked, her voice . . . low and comfortable.

"Yes," he nodded, swallowing hard beneath his collar, which . . . hasn't scratched yet.

"Then before I accept," she went on, "don't you think you'd better . . . ask the man who owns one?"

"If you mean your father," the young man answered, "I'm sure he'll give his consent. Just you name the day and I'll . . . keep contents hot for twenty-four hours."

He folded her in his arms, and his kisses were . . . supplied direct from the factory.

"Sweetheart, say that you'll be mine," he repeated.

"Very well, dear," she whispered. "I'll . . . try it for thirty days."

Whereupon he kissed her again and again . . . showing many different styles and patterns.—*Lisle Bell in the New York American*.

\$1,000 IN CASH PRIZES

for Best Photographs Showing Durability of Copper, Brass and Bronze

\$500 in Cash Prizes for OBJECT LESSONS IN WASTEFULNESS

of using substitute metals where one of the non-rusting metals, Copper, Brass or Bronze, should be used.

First prize, \$150 Second prize, \$125
Third prize, \$ 75 Fourth prize, \$ 50
Ten prizes of each, \$10

\$500 in Cash Prizes for OBJECT LESSONS IN ECONOMY

of using Copper, Brass and Bronze, which will not rust, and are practically everlasting.

First prize, \$150 Second prize, \$125
Third prize, \$ 75 Fourth prize, \$ 50
Ten prizes of each, \$10

SUGGESTIONS FOR SUBJECTS

FAILURE OF SUBSTITUTES —

In Roof Drainage—Close-up photographs of rusted leaders and gutters. Take in portion of wall, showing paint spoiled, if any, by rust water from leaking leader or gutter. State kind of metal and how long gutter or leader in use before rust caused it to leak.

In Plumbing—Close-up photograph of section of rusted pipe removed from a plumbing system, showing hole or holes eaten by rust. Photograph showing a pipe closed, or nearly closed, by rust accumulation inside it.

Close-up of bathtub, washbowl or sink stained by rust in water from rusty pipes.

Interior Damage—Photographs of wall paper, painted or kalsomined wall or ceiling or other decorations, badly stained, or perhaps of plaster destroyed, by rust leaks resulting from failure to use Copper gutters, flashings, etc., on roof, or Brass pipe and Brass fittings in plumbing system; photograph of a wall, partition, floor or ceiling torn open to get at rusty, leaking pipes, or a similar operation made necessary by failure to use Copper or Brass, which do not rust.

ings, etc., on roof, or Brass pipe and Brass fittings in plumbing system; photograph of a wall, partition, floor or ceiling torn open to get at rusty, leaking pipes, or a similar operation made necessary by failure to use Copper or Brass, which do not rust

In Building Hardware—Close-up photograph of a door hanging on rusted fragment of a hinge, or a door pried open because a lock rusted shut; a rusted door-knob, rusted letter drop, rusted mail box, rusted

hinge, rusted screw, or a rusted example of one of the many other items of merely plated hardware which rust as soon as the thin plating has worn off, become unsightly and perhaps mar paint and injure woodwork with their rust—a condition that is avoided by the use of all-Brass or Bronze hardware instead of the dipped, short-lived article.

DURABILITY OF COPPER AND BRASS —

In Drainage—Photograph of an old Copper leader still in place or an old Copper gutter still doing duty after many years of service without upkeep or repairs. Do not fail to give date the Copper leader or gutter was put up. Must be at least 35 years old to qualify.

In Roofing—Photograph showing example of the everlasting life of the Copper roof. State number of years the Copper has been in service without upkeep or repairs. Photograph must of course show the roof clearly and cannot qualify unless the Copper has been in place 35 years or more.

In Plumbing, etc.—Photograph of a section of Brass pipe or a brass fitting *still in place* that has been in service 35 years or more without upkeep or repairs.

In Other Uses—Photograph of an item of Brass or Bronze hardware with a long service record, a Brass or Bronze plate, a building ornament of Brass or Bronze, a Copper or Bronze window screen, a Copper

cooking utensil, or other Copper, Brass or Bronze article of utility or ornamentation. Must be at least 35 years old.

Get out your camera and look about you for subjects. You will find them everywhere.

Copper, Brass and Bronze are cheaper because you pay for them only ONCE.

Rules of the Contest

Photograph must have been taken by person entering it in the contest. A contestant may enter one or more photographs.

Name and address of contestant and all descriptive matter to be written on the back of the photograph.

Statements as to age and condition of object photographed will be verified before prizes are awarded and contestant should furnish with his or her entry information that will facilitate verification.

The subject need not be the contestant's property, but contestant must have the owner's permission to photograph it for entry in the contest unless the subject be public property.

By "best" photograph in the metals-that-rust class is meant the photograph of a subject which by reason of its condition, short life and interest is believed by the judges to furnish the most interesting object lesson in the error of using other metals where Copper, Brass or Bronze should be used.

By "best" photograph in the Copper-Brass-and-Bronze class is meant the photograph of a subject which by reason of its condition, long life and interest is believed by the judges to furnish the most interesting object lesson in the economy of using Copper, Brass and Bronze, which do not rust.

Where the subject is a part of a building or other structure the contestant may send also a photograph of the structure in which the subject is or was installed if the contestant feels such a photograph, in combination with the subject itself, will lend additional interest to the subject. Every such photograph should carry on its back information identifying it with the item entered.

Contest closes Sept. 1, and all entries must reach the address given below on or before that date. Every photograph received will be promptly acknowledged. Prizes will be awarded within sixty days after closing date.

Prize-winning pictures will be used in a publicity campaign to inform the public on the economy of using Copper, Brass and Bronze, and in entering a photograph the contestant agrees to such use of his entry.

Wrap your photographs carefully, protecting with cardboard, and send to Contest Committee, Copper and Brass Research Association, 25 Broadway, New York.

Make fast—make fast to economy now! The Mimeograph is one of the greatest time and money savers of the age. Thousands upon thousands of industrial and educational institutions throughout the world are profiting today by its great speed, by its remarkable efficiency and economy. Five thousand fine copies an hour of any letter, instruction, message, bulletin, chart, map, cartoon, design—picture and typewriting combined in the same page if desired—is its normal output. And working partner to this champion device of better and quicker business is the Mimeoscope—by which all kinds of plans, designs, etc., are easily duplicated—without using expensive cuts. Why not tie fast to the Mimeograph now? Ask Tel-U-Where for our local address, or send for booklet “L-6” to A. B. Dick Company, Chicago—and New York.

LAW

STUDY AT HOME

Become a lawyer. Legally trained men win high positions and big success in business and public life. Greater opportunities now than ever before. Be independent—be a leader. Lawyers earn

\$3,000 to \$10,000 Annually

We guide you step by step. You can train at home during spare time. Let us send you records and letters from LaSalle students admitted to the bar in various states. Money refunded according to our Guarantee. Good if dissatisfied. Degree of LL. B. conferred. Thousands of successful students enrolled. Low cost, easy terms. We furnish all text material, including fourteen-volume Law Library. Get our valuable 120-page "Law Guide" and "Evidence" books FREE. Send for them—NOW.

LaSalle Extension University, Dept. 652-LB, Chicago

Will There Be Any Religion Left?

What kind of religion will it be? Which denominations will survive? What type of Christianity will prevail? How did the Church come out of the war—stronger or weaker? What was the Church's attitude toward pacifists? These are some of the very vital and timely questions that the Rev. Dr. W. E. Orchard discusses with most amazing frankness in his provocative book.

"THE OUTLOOK FOR RELIGION"

a work that will make a strong, lasting impression on the mind of every thoughtful reader. Dr. Orchard is an original thinker and forcibly analyzes the present religious crisis. He concludes by giving his own positive ideas as to Christianity's hope for the future. Read it for information on true conditions—or for pleasure, or for both.

8vo. Cloth. 272 pages, \$1.50 net; \$1.62, postpaid.

FUNK & WAGNALLS COMPANY, Publishers, 354-360 Fourth Ave., New York

Elinor Glyn says.

Thousands who don't dream they can write really can. YOU have ideas for stories and photoplays—why don't you turn them into cash? There are just as many stories of human interest right in your own vicinity as there are in Greenwich Village or the South Sea Islands. And editors will welcome a story or photoplay from you just as quickly as from any well-known writer if your story is good enough. They will pay you well for your ideas, too—a good deal bigger money than is paid in salaries. You can accept my advice because millions of copies of my stories have been sold. My book "Three Weeks" has been printed in every tongue, except Spanish. My photoplays are known to millions. I do not say this to boast, but merely to prove that you can be successful without being a "genius." I believe thousands of people can make money in this absorbing profession. I believe this so firmly that I am going to show YOU how easy it is when you know how. Simply write to my publishers, The Authors' Press. They will send you a handsome little book called "The Short-Cut to Successful Writing." This book is ABSOLUTELY FREE. No charge—no obligation. Write for it NOW. Just address Elinor Glyn's publishers: THE AUTHORS' PRESS, Dept. 187 Auburn, N. Y.

Digesting the Foreigner

America's big problem. Congress has wrestled with it for generations. The United States Immigration Commission spent four years studying the effect of immigration on American civilization and Jeremiah W. Jenks, Ph.D., LL.D., Research Professor of Government and Public Administration, New York University, and W. Jett Lauck, Director of the Bureau of Applied Economics, Washington, who were officially associated with the Commission, have given the gist of its 42-volume report in their wonderfully comprehensive and interesting book—

THE IMMIGRATION PROBLEM

(New and Revised Edition)

After passing through four editions, the book is now coming from the press in a fifth edition, revised, enlarged, and strictly up-to-date, by Rufus D. Smith, M.A., Associate Professor of Public Economy, New York University. The book now contains immigration laws and regulations up to May, 1921, and all available new data and statistics, based on the 1920 census. Prof. Smith has added three important chapters—Immigration Problems of Other Countries, The Race Problem in the Pacific, and Present and Future Restrictions. The book is a most admirable survey of the immigration situation, and the recommendations of its authors will go far toward solving the problem.

Cloth. 8vo. 682 pages

Funk & Wagnalls Company, Publishers, 354-360 Fourth Avenue, New York

To Stop Strikes and Lockouts

The enormous losses in wages and production caused by industrial strikes and lockouts, and the highly approved remedy suggested for ending the antagonism of Capital and Labor are clearly detailed in that remarkable new book—

THE INDUSTRIAL CODE

By W. Jett Lauck and Claude S. Watts, both of whom served with distinction on the National War Labor Board. The authors ably point the way to the first real constructive step in settling labor troubles by the establishment of an industrial code. The idea has been advocated by President Harding in a message to Congress and the industrial readjustment in the near future will unquestionably revolve around the matters that are so sensibly and thoroughly discussed in this book. You will find its 576 pages intensely interesting, as well as enlightening.

Cloth \$4, net; \$4.12, postpaid.

Funk & Wagnalls Company, Pub's, 354-360 Fourth Ave. New York.

Practical Books for the Writer, Speaker, Editor, Teacher

By FRANK H. VIZETELLY, Litt.D., LL.D., Managing Editor of the NEW STANDARD DICTIONARY

A Desk-Book of Errors in English

IT treats of the hundred and one questions that arise in daily speech and correspondence which are not touched on by the dictionary. The New York Times says: "The scope and plan of the volume, which is of handy size and alphabetical arrangement, strike one as pleasantly sane and sound." \$1.50 net; by mail, \$1.58.

Essentials of English Speech and Literature

Third Revised Edition

A RECORD in concise and interesting style of the Origin, Growth, Development, and Mutations of the English Language. It treats of Literature and its Elements; of Writing for Publication and of Individuality in Writing; also of the Corruption of English Speech. \$2.00 net; by mail, \$2.12.

The Preparation of Manuscripts for the Printer

CONTAINS directions to authors on the manner of preparing copy, correcting proofs, submitting manuscripts, copyright laws, etc. Cloth, \$1.50 net; by mail, \$1.58.

A Desk-Book of Twenty-five Thousand Words Frequently Mispronounced

EMBRACING English, Foreign, Bible, and Geographical Terms and Proper Names Carefully Pronounced, Annotated and Concisely Defined. Cloth, 750 pages, \$2.00; Indexed \$2.25; Full Leather Indexed \$3.00; by mail, 12c extra.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York

Do 19 out of 20 persons have "Acid-Mouth"?

The chances are you have "Acid-Mouth"

It is said that only one person in twenty is free from "Acid-Mouth," the condition that causes early tooth decay. So you have but a small chance of being free from this condition—unless you take steps to guard against it.

"Acid-Mouth" is doubly treacherous because it works unseen and unfelt. The first warning of what "Acid-Mouth" is doing comes with the twinge of pain that tells you a tooth is decaying. Soon other teeth decay and ache—victims of "Acid-Mouth."

To combat this destructive

enemy, thousands of men and women clean their teeth night and morning with Pebeco Tooth Paste.

Pebeco is the tooth paste that counteracts "Acid-Mouth" by stimulating the flow of normal alkaline saliva—Nature's own mouth wash, and the most effective means of neutralizing mouth acids.

In addition to checking "Acid-Mouth," Pebeco keeps the teeth clean and firm, and leaves the mouth delightfully refreshed.

To the last squeeze, Pebeco rolls out of the tube fresh and creamy.

LEHN & FINK, INC.

635 Greenwich Street, New York

Ask your Druggist for the Pebeco Tooth Brush—

It cleans every part of every tooth

Canadian Agents: Harold F. Ritchie & Co., Limited, 10 McCaul Street, Toronto

Is it true that only 1 person in 20 is free from "Acid-Mouth"?

How to tell if you have "Acid-Mouth"

First, send for Litmus Test Papers and big trial tube of Pebeco

Then moisten a blue Litmus Test Paper on your tongue. If it turns pink, that indicates an acid condition in the mouth. Brush your teeth with Pebeco and make another test. The paper will not change color, thus demonstrating how Pebeco helps to counteract "Acid-Mouth."

Fill in the coupon now, enclose ten cents and mail to us at once. The Litmus Test Papers and big trial tube of Pebeco will be sent you immediately.

LEHN & FINK, INC.
635 Greenwich Street, New York

Enclosed find 10 cents, for which please send me your Litmus Test Papers and large trial tube of Pebeco.

The Literary Digest School and College Directory

"THE GATES OF THE FUTURE
STAND WIDE OPEN"

FOR INSTITUTIONS WHICH BUILD CHARACTER THROUGH EDUCATION AND TRAIN FOR RESPONSIBILITIES OF LIFE THE NEED IS EVER GREAT

LITERARY DIGEST readers seeking private institutions of learning will find in our pages between May 13th and September 9th, the following Classified Directory containing the names and addresses of some distinctive residential schools; vocational, professional, special schools; colleges, and supervised camps. Advertisements describing these institutions will be found in the first issue of each month from May to September.

You are invited to write for information to any of the institutions in which you are interested. We list only such schools as we believe are under highly trained and public-spirited executives. Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary for inquirers to give specific information that may aid us in giving prompt service.

You're missing a true, colorful, gripping story of a real man, if you fail to read

Sergeant York and His People

by Sam K. Cowan

With all the tense interest and swift action of a novel, this new volume, *just off the press*, brings you a true story stranger indeed than fiction—a story of home, work, war, faith in God, and love told about the type of man whom we call an American with a thrill of pride. The scenes range from the stern, sun-kissed mountains of Tennessee where Sergeant York was born to that perilous, shell-ridden battlefield in France where this young Tennessee mountaineer amazed the world with his almost unbelievable feat of individual skill and lion-hearted bravery.

Read this book and you'll agree with the Literary Editor of the *Chicago Daily News* who says, "Whew, but this book about Sergeant York has hit us in a tender spot! If it doesn't hold a thrill and a smile and a tightening of the throat for you, then you're not the reader for whom we are editing this book page, that's all."

At booksellers, \$2.00, net;
by mail from the publishers, \$2.12.

To Win Friends, Fame, and Fortune

Why do some deserving men fail in business? Why are some handsome, well-educated men unpopular in social life? What is the *real secret* of achieving personal success?

These and hundreds of other pertinent questions on the tip of your tongue are answered by that popular inspirational writer, H. Addington Bruce, in his invigorating and fascinating new book—

SELF-DEVELOPMENT

A wonderfully clear-cut analysis, in plain, conversational English, of certain mental actions and reactions, every page radiating *encouragement* and *helpfulness* for ambitious men and women.

It explains how you may develop will power, memory, poise, and personality; elaborates on the simple methods all *must* adopt—and which are *easy to adopt*—to achieve marked success in social and business life; visualizes the insidious pitfalls that *must* be avoided—and which are *easy to avoid* after he points them out.

All that Mr. Bruce advises will appeal to you. You'll *know* he's right! And everyone who takes his advice will be better able to win friends, fame, and fortune and to get *all* the good out of life that life has to offer.

"Gives an illuminating explanation of real success and the courses to follow in its attainment."—*Deseret News, Salt Lake City*.

"Any young man who refuses to be stimulated and inspired through reading a book like this needs to alter his viewpoint in life."—*Star, Toronto*.

Always Wore His Wedding Suit

Have you heard the story of Old Darnman, an eccentric character of New England? Some have considered him mythical, like the Wandering Jew. But he was a real man and the pathetic romance of his blighted love is sweetly told in a little book, "The Old Darnman," by that eminent divine and lecturer, Rev. Charles L. Goodell.

16mo. Cloth. Illustrated. 40c, net; 44c, postpaid.

BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 3000 Certified Public Accountants in U. S. Many are earning \$3,000 to \$10,000 a year. We train you *thoroughly* by mail in spare time for C. P. A. examinations or executive accounting positions. Knowledge of bookkeeping unnecessary to begin. The course is under the personal supervision of William B. Castenholz, A. M., C. P. A., former Comptroller and Instructor, University of Illinois; also former Director of the Illinois Society of C. P. A.'s, and of the National Association of Cost Accountants. He is assisted by a large staff of C. P. A.'s, including members of the American Institute of Accountants. Low tuition fee—easy terms. Write now for information. LaSalle Extension University, Dept. 652-HA Chicago

The Largest Business Training Institution in the World

EVERSHARP

REG. U.S. PAT. OFF.

The definite name for definite quality

The name EVERSHARP is on the pencil. It marks the product of The Wahl Company—the maker of the first and only mechanical pencil to be nationally accepted. Millions are in use. All who buy EVERSHARP today deliberately select it as the best that can be bought. No other pencil can be like EVERSHARP; the exclusive tip in which the lead cannot slip keeps EVERSHARP supreme in writing efficiency. Durable metals, fashioned with precision, make EVERSHARP everlasting.

Buy your EVERSHARP *by name*. Look for the name on the pencil. Many beautiful styles in gold, silver and enamel. Priced from 65c to \$65. Enough lead to write 250,000 words comes with every EVERSHARP. A complete refill—a red top box of extra leads and an eraser—costs but fifteen cents.

EVERSHARP is matched in efficiency and design by Wahl Pen, with the famous all-metal barrel that holds more ink; factory tailored to fit your hand. These perfect writing companions are sold everywhere.

Made in U. S. A. by THE WAHL COMPANY, CHICAGO
Canadian Factory, THE WAHL COMPANY, LTD., Toronto

Use only EVERSHARP Leads. They fit accurately the exclusive EVERSHARP tip. Seven grades:

2B—Extra Soft
B—Soft
HB—Medium Soft
F—Firm
H—Medium Hard
2H—Hard
4H—Very Hard

Also indelible. Ask the office manager to supply you with EVERSHARP Leads in the red top box.

When he suddenly takes to soap-and-water—

Your boy!

For all too short a while he will be in your home.

There comes a time in every boy's life when his dislike for washing suddenly disappears, and for mysterious reasons he begins to scrub.

While he is still with you, encourage his cleanliness. "So great is the effect of cleanliness upon man that it extends even to his moral character."

Give him plenty of Ivory Soap for his face and hands. He can wash a dozen times a day with Ivory and his skin will still be soft and smooth.

Give him Ivory for his bath—it lathers so richly, it rinses off so quickly and "It floats!" It is pure and mild; white and fragrant, too.

In all these seven different ways, Ivory is a manly, friendly, fine soap for boys.

Whenever soap comes into contact with the skin—use Ivory.

IVORY SOAP

IT FLOATS

99 $\frac{44}{100}$ % PURE

Ivory Soap comes in a convenient size and form for every purpose

Small Cake

For toilet, bath, nursery, shampoo, fine laundry. Can be divided in two for individual toilet use.

Large Cake

Especially for laundry use. Also preferred by many for the bath.

Ivory Soap Flakes

Especially for the washbowl washing of delicate garments. Sample package free on request to Division 38-F, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, Ohio.

LABOR UNIONS LIABLE TO PAY FOR STRIKE DAMAGES

AT LAST CAPITALISM has found a way to kill the labor-union movement in the United States, asserts a chorus of protesting voices from the ranks of organized labor. The weapon with which this feat may be performed, we are told, was forged by the Supreme Court when, in handing down its decision in the famous Coronado coal-strike case, it declared that "such organizations are suable in the Federal Courts for their acts, and that funds accumulated to be expended in conducting strikes are subject to execution in suits for torts committed by such unions in strikes." As a result of this ruling, admits an American Federation of Labor counsel, if the railroad unions strike they will be liable under provisions of the Sherman Anti-Trust Act for conspiracy in restraint of trade. Moreover, predicts the *Boston Herald*, the affirmation of union liability "will necessarily have a material effect upon the strike now in force," because the operators, "knowing that if they are injured financially by the United Mine Workers they can recover three times their damage," will be encouraged to reopen their mines.

But if any of the general public find comfort in these aspects of the case, union labor apparently does not share it. The unanimous opinion delivered by Chief Justice Taft, declares Samuel Gompers, President of the American Federation of Labor, establishes a precedent under which capital can "impose any condition on the working people of the country and they would not dare resist." "For the first time in the history of Federal legislation," says Mr. Gompers, "the Court has laid down the principle that a voluntary corporation is liable to be held for damages by any act committed by one or a group of its members, no matter how far unrelated they may be in distance or supervision." The same principle, he reminds us, was affirmed twenty-one years ago by an English court in the famous Taff-Vale case, but "within a year Parliament passed the Trades Dispute Act, in which the decision was rectified." As quoted in the *New York Times*, this veteran labor leader went on to say:

"Just about that time a suit was brought in the courts of the United States in the famous Danbury hatters case, in which the theory of the Taff-Vale decision was followed. Following that, Congress of the United States passed a bill known as the Clayton Anti-Trust law, amendatory of the Sherman Anti-Trust law. Sections 6 and 20 of that law undertook to remedy the decision of the Federal courts in the famous Danbury hatters case.

"And now the Coronado case. The Court has practically swept aside or annulled the provisions of the Clayton law. The Coronado case is the climax of decisions of the Supreme Court in the past few months against labor and since the ascension to the Chief Justiceship of Mr. Taft.

"It establishes the principle that unions of labor are responsible for the conduct of any of its members. The textile workers, 60,000 in number, are on a strike now against a reduction in wages. Under the terms of the Supreme Court the union can be held responsible for any damages that the mill-owners can show they suffered by reason of the strike.

"The shoe-workers are now on strike in Cincinnati against a 10 per cent. reduction, and under the Coronado decision the

strikers could be held liable for three times the loss sustained by the companies. The same holds true in any strike where the union gives its approval.

"But there is a latent power over and above the Supreme Court of the United States, and that is the power of Congress and the people of the United States. Everybody is agreed that child labor should be abolished, yet the Supreme Court recently annulled the law against child labor. It goes without saying that the convention of the Federation of Labor will take steps seeking legislation to remedy the effect of the Coronado decision."

In this comment Mr. Gompers "seems to have arrived at a snap judgment on the Coronado decision," remarks the Cincinnati *Times-Star*, which is owned by a relative of the Chief Justice. Taking his reference to the shoe strike in that city as an example, it says:

"The present strike of shoe-workers in Cincinnati has been a lawful strike. So long as it continues lawful there will be no possibility of successful legal action against the union. If the strike should become lawless, if it should result in an illegal boycott, the burning of a factory, or ruthless violence such as marked the Coronado strike, then the funds of the union would

WHAT THIRTEEN YEARS HAVE DONE.

President Taft, 1909, and Chief Justice Taft, 1922.

be endangered. . . . Another fact that seems to have escaped Mr. Gompers' attention is that the decision of the Supreme Court is unanimous. Among the Justices of the present Court are men who are regarded as liberals as well as men who are regarded as conservatives. If the decision was as bad as Mr. Gompers thinks, how does it happen that we hear of no dissenting opinion by Justices Brandeis or Clarke?"

Mr. Gompers, however, is not alone in sensing a menace in this Supreme Court opinion. It "is most ominous in what it foreshadows for the future of union labor in this country," declares Senator La Follette, of Wisconsin. It is "a serious blow to organized labor," agrees Morris Hillquit, attorney for many big

labor unions, who regards it as "part of a general tendency to restrict the power of labor." The labor press is even more emphatic in its condemnation. "Chief Justice Taft is specializing in court decisions which are designed to destroy labor organizations and to strip the workers of every safeguard which has been thrown around them through generations of struggle," avers *Labor* (Washington, D. C.), which predicts that this latest ruling, instead of terrifying the workers, "will arouse them as the Dred Scott decision fired the liberty-loving men and women of America and as the infamous Taff-Vale decision in 1901 spurred the British toilers to action." The *Minneapolis Labor Review* thinks that "the American plutocracy intends to follow judicial violence with armed violence against the organized workers and organized farmers." But it predicts that "this attempt to abolish labor unions will be as futile as was the crucifixion of Christ to prevent the spread of Christianity." The *Portland Oregon Labor Press* sees in the decision a case of "judicial usurpation." We read in this Pacific coast paper that—

"It invades the legislative field, enacts one law and repeals parts of another. A new and easy way has been found to secure anti-labor legislation without jeopardizing the political fortunes of lawmakers who are friendly to capital."

"The most staggering blow ever aimed at the organized working class," is the Socialist New York *Call's* characterization of the ruling. "The Supreme Court," avers *The New Majority* (Chicago), "has laid the legal groundwork for the attempted destruction of the unions and enslavement of the workers by practical and effective denial of their right to strike." "The decision returns labor to the property classification and nullifies the labor provision of the Clayton Act," remarks the *Duluth Labor World*, which goes on to say: "If a union can be sued it should also be able to sue, in which event it may compel employers to pay for damages incurred by workers in and following strikes, of which discrimination, blacklists and other persecutions play an important part." This decision, fears the *Seattle Union Record*, "will go a long way toward nullifying the fine work of the American Federation of Labor in the past few years in forwarding labor advances through orderly methods." "It is pie," adds this Western journal, "for the direct actionist who preaches that Government is designed solely for the purpose of keeping the working class in a state of subjection to employers." "If the decision stands," agrees the editor of the *Indianapolis Union*, "I see nothing ahead but vastly increased radicalism in labor circles." He goes on to say:

"The Reds and Bolsheviki will thrive on such decisions. They say triumphantly, 'didn't I tell you that the courts were against the worker? Join the one Big Union and kick the bucket over. Seize everything. What other chance have you got? This paper has always stood against socialism and any kind of radicalism in the ranks of labor, but we can not but fear the decision.'"

The *Butte Bulletin*, another labor journal, undertakes to illuminate the situation by imagining the actual conditions reversed:

"If the people of the United States about the year 1890 had been under the growing and despotic control of labor unions: If such unions had tyrannously used their power to bankrupt their employees, enrich themselves, and prey upon the commercial and business classes; if rebelling against such conditions the Congress of the United States had passed a law prohibiting monopolies by labor; if thirty years later labor unions were still more firmly in the saddle and preyed still more relentlessly upon a broken and disorganized business class; and if at that time a Supreme Court of the United States composed of the favorites and hangers-on of these labor unions and appointed through their influence had rendered a decision that the anti-labor monopoly law was intended to apply to the puny and impotent commercial class of the United States, then we would have a situation parallel to that which the nine silk gowns at Washington have just furnished to an admiring audience of monopolists and profiteers."

Other labor journals agree with Morris Hillquit, the labor lawyer, who predicts that the ruling in the Coronado case "will hasten the day when the 6,000,000 union men and women of this country will take independent political action, the only means left them to offset judicial limitations." "Recalling that the British Labor Party came into being as a result of the Taff-Vale decision, the *Kansas City Appeal to Reason* declares that "an American Labor Party will be the answer" to the Coronado decision. "This decision should solidify labor's ranks politically," agrees the *Jackson, Mich., Square Deal*, which exhorts American labor to "get busy" at the ballot-box. "The American Farmer-Labor Party did not bribe the Supreme Court to render this decision, but it owes Taft and his colleagues a vote of thanks for demonstrating completely to American workers the absolute necessity for united political action," remarks *Real Democracy* (Chicago). Political solidarity on the part of labor is also the remedy suggested by the *New York Advance*, organ of the Amalgamated Clothing Workers of America; by *Labor* (Washington, D. C.); the *San Francisco Labor Clarion*; and by the *Socialist Schenectady Citizen*.

One labor paper views the decision through comparatively rosy glasses. In the Coronado case the United Mine Workers

of America were sued for enormous damages, but the Supreme Court, while indorsing the principle on which they were sued, refused to sustain the verdict against them rendered by the lower courts. Says *The United Mine Workers' Journal*:

"Altho the Supreme Court says in the Coronado decision that labor unions can be sued for damages for destruction of property in a strike, it also makes certain limitations and restrictions upon that rule. It says an international union can not be held in damages for what is done in a local strike unless it authorizes, sanctions or ratifies the strike. Second, coal-mining and the manufacture of goods is not interstate commerce even tho the coal or the goods may be shipped from one State to the other. Interruption of coal-mining, the court says, is not an interruption of interstate commerce. Both of these features are of great importance. Besides, if a labor union is such an entity as can be sued it must also be such an entity as can sue. Then, since this principle is established, labor unions ought to make use of the injunction process and damage suits against union-busting employers for the protection of the rights of their members as the employers do for their own benefit."

Turning now to publications that speaks authoritatively for the employing classes, we find *The Manufacturers' Record*, of Baltimore, welcoming the decision that unions can be sued because it "clarifies the atmosphere and brings all classes under the same law." It goes on to say:

"The effort of labor unions to make themselves superior to the law has been one of the greatest handicaps to their own work, and very largely responsible for the intense growing opposition throughout the country to the domination which labor unions have endeavored to force upon employers. More than thirty years ago Hon. Chauncey F. Black of Pennsylvania, then President of the National Association of Democratic Clubs and leader in the Democratic party, and one of the foremost lawyers of the country, took the ground that the only safety alike for labor and for capital would be the incorporation of labor organizations under a national law which would give them the right to make contracts under which they could sue or be sued. It is altogether possible that out of the decision of the Supreme Court will come a movement to carry out the plan suggested by Governor Black for the incorporation of labor unions. *The Manufacturers' Record* is unalterably opposed to low wages, but it is also unalterably opposed to any organization of labor or capital which would seek to be above the courts, and thus above all legislation."

Samuel Untermyer, a well-known New York lawyer, who describes himself as "a life-long champion of organized labor," says that "if the workers understand their best interests and are well advised the decision should lead to the voluntary incorporation of all labor unions, thus shielding the individual members from personal liability, except where they have taken an active part in acts resulting in the restraint of interstate commerce."

Turning from the views of the press of the workers and the press of the employers to the daily newspapers of the country, we find an opinion almost unanimously favorable to the court. There is no doubt in the mind of the *Chicago Tribune* that "a long-vexed question has been set at rest—for the time being, at least," and it proceeds:

"The contention of the unionists has been that a trade union is an unincorporated association, like a partnership, and could

not be held responsible for the acts of its members. Funds owned by the union, under such a doctrine, would be immune, and the individual injured would be compelled to sue individual members of the union. The unions in contending for immunity from a collective responsibility imposed upon other associations have raised an issue of class legislation to which no individual could wisely be indifferent."

The Supreme Court's Coronado decision "lifts union-made strikes out of the category of guerrilla warfare," avers the *Norfolk Virginian-Pilot*, which believes "no more important decision bearing on labor unions has ever been formulated" by the Supreme Court. The judgment of the court is a serious blow only

to "the illegitimate use of the strike," says the *Louisville Courier-Journal*. The *Pittsburgh Gazette-Times* tells us "the legal immunity which labor unions have enjoyed does not comport with the degree of justice which Americans desire shall be accorded," and the *Columbus Ohio State Journal* maintains that "if capital has the right to organize, so has labor: and, if government has the right to exercise control over organizations of capital, so has it over those of labor." The *Los Angeles Times*, for years a powerful critic of unionism, declares that "no Supreme Court decision since the time of John Marshall has been more momentous," and explains that:

"This decision, stripping away the special privileges heretofore extended to the unions through political cowardice, places upon them full responsibility for their deeds. Union radicalism, a defiance to true industrial freedom and a constant threat to orderly government, began by fawning upon politicians and ended by intimidating them. Through that intimidation was built up the intolerable system for ham-stringing industry and leveling down all workers against which public opinion is now running so powerfully in America.

"The cornerstone of that system was freedom from responsibility under the law. From it two things resulted. First, unions were able to enter into formal agreements with employers in such a way as to hold the employer legally responsible without being responsible themselves. Secondly, They were permitted to raise funds with which to incite their adherents to violence and even to finance them in their campaigns of bombing and bloodshed without the danger of having those funds depleted by any judgment for damages. In other words, they were under the protection of the law, but not amenable to it."

THE PRIMARY AS A RICH MAN'S GAME

GIFFORD PINCHOT'S VICTORY in the Pennsylvania primaries seemed to many observers—to the independent *Chicago Daily News*, for instance—a striking vindication of the direct primary, because it permitted the rank and file of Republican voters to choose as candidate for Governor an independent, able, progressive, anti-machine man who “would not have had a chance under the convention system.” But no less striking, to judge from editorial comment, was the reminder that the primary is pretty likely to be “a rich man's game.” A few days ago the *Philadelphia Record* (Dem.) called attention to the fact that Mr. Pinchot admitted having paid \$93,562.14 in cash for primary expenses; that Mrs. Pinchot had paid \$29,500; that another member of the Pinchot family had paid \$1,500; and that “in addition there were other large sums contributed

“If they can afford it, it was worth it. Since politics is so organized in this country that the highest offices are attained only by men of wealth, regardless of the system of selection, it is better that these offices be won in open warfare than by sapper tactics conducted in the murkiness of packed conventions.”

“The money I spent,” says Mr. Pinchot, “was honestly, legitimately, openly, and economically spent, and honestly reported.” Quite so, and probably it took all that money to beat the Penrose machine, agrees the *Baltimore Sun* (Dem.). And yet when Newberry spent but \$70,000 more the Senate only “half-heartedly seated” him and went on record that the expenditure of so much money was “harmful to public morals, subversive of the dignity of the Senate, and dangerous to the perpetuity of free institutions.” Now, says *The Sun*, while “there can be no step backward from the primary to the outworn convention system with its bossism, its deals, and its thwarting of the popular will,” it is no less evident that—

“The direct primary system has some grave defects. They must be got rid of, if possible; but how to do it is a question. None of the remedies which we have seen suggested is free itself of objection. The proposals to limit and regulate the expenditure of money involve statutes which are easily evaded, and, at any rate, when it costs several tens of thousands of dollars in some States to mail a single letter to each voter, and when that expenditure could by no means be called an illegitimate one, it is rather useless to talk of placing a small total limit on the amount that can properly be expended. In time this defect may be remedied, or some better way of nominating candidates than by the direct primary may be found. Meanwhile, however, it is to be remembered that altho the direct primary is very faulty when compared with an ideal system it still has merit compared with the convention system which it superseded. Under that old system a great deal of money changed hands in connection with nominations, but it went not for postage or printing, but directly into the pockets of the all-powerful bosses.”

The ease for the direct primary, as the *Newark Sunday Call* (Ind.) notes, is well put by State Senator W. N. Runyon, who is after the Republican nomination for Governor of New Jersey. “Believing,” he says, “in the American system of party government and that the direct primary is the only agency through which party organizations may be made responsive to the wishes of the people, I strongly advocate the upholding and continuance of the present direct primary law for that purpose.”

But, observes President Harding's *Marion Star*, which is in entire agreement with its distinguished owner in being dissatisfied with the primary system, “there is something wrong with a statewide primary system that permits a man to spend such an immense personal sum, or compels him to spend it, if he is to become the successful primary candidate.” The Washington correspondent of the *Seattle Times* says that while it may have been interrupted by such popular successes as those of Pinchot and Beveridge, there is a distinct trend against the primary. He points out that bills repealing the direct primary laws are expected to pass at the next session of the Indiana and Maine legislatures, that such a bill did pass in the New York State legislature last winter, and that Minnesota and Iowa have adopted systems combining conventions and primaries. Mr. Jermaine finds five arguments against the direct primary: first, it represents minority rule, since so few qualified voters take part; second, it has lowered the standards of efficiency among public men; third, “when these incompetent and unscrupulous men get into office under the primary it is next to impossible to dislodge them”; fourth, it is “a rich man's game”; fifth, it tends “to destroy party organization.” The writer in the *Seattle* paper perceives a drift away from the primary in nearly every section of the country. He expects it to take form in action in a number of States: some of them like New York may go back to the old convention system; “the opinion of Washington, however, is that, as a rule, whatever is good in the primary will be retained and grafted upon a modified convention system that will prevent a recurrence of the old convention abuses.”

A SUNRISE IN PENNSYLVANIA.

—DeMar in the *Philadelphia Record*.

and acknowledged.” Here this Democratic newspaper, perhaps naturally suspicious of all Republican candidates, says that the Pinchot family did something “quite without parallel in the history of American politics.” But other editors remember that Mr. Newberry spent something like \$200,000 to carry a Senatorial primary in Michigan not so very long ago; that Senator Isaac Stephenson spent \$100,000 in the Wisconsin primaries away back in 1908; and in 1909, when there was no question of a primary or a popular election, some one remarked of a recent election of a United States Senator by the Illinois legislature: “Well, we put Lorimer over down there at Springfield and it cost us about \$100,000 to do it.”

However, Mr. Pinchot's friends have arisen everywhere to point out, as we read in the *Minneapolis Journal* (Rep.), “that with two million voters or more to reach in the State of Pennsylvania, the wonder was that Pinchot had been able to make a thorough campaign for so small a sum—six or seven cents apiece. In Pennsylvania it costs a pretty penny merely to send a post-card to each voter.” Under existing primary systems, remarks *The Tribune* of the same city, “a candidate is obliged to spend a considerable sum of money to carry his message and his political identity to the electorate in perfectly legitimate ways.” And a Democratic journal like the *Norfolk Virginian-Pilot* sees no need of being “unduly deprest by the fact that beating the Old Guard cost Pinchot and his wife an eighth of a million dollars”—

UNCLE SAM TAKES A HAND IN TURKEY

ARE WE LETTING DOWN the international bars a little in accepting the invitation of Great Britain to join with that country, France and Italy in an investigation of both Greek and Turkish atrocities in Asia Minor? Does the Secretary of State's acceptance mean that the United States is to reenter European politics? In his note to Great Britain, Secretary Hughes stipulates that the inquiry shall be limited to obtaining accurate data, and that the United States "shall assume no further obligation and enters into no commitment." Then comes the big question, put by a foreign correspondent: "Can the American Government even conduct an impartial investigation in Asia Minor without becoming involved in the European political tangle?" And if the Turkish Nationalist Government, under Mustafa Kemal Pasha, is found to have been carrying on a campaign of extermination against the Greeks in Anatolia, and if it is discovered that the Greeks, not to be outdone, are guilty of maltreating Mohammedans in territory under their control, what will the United States do about it? These are some of the questions which our acceptance of the British invitation has brought up.

The latest news of Turkish atrocities comes from American relief organization heads in Asia Minor, particularly Dr. Mark Ward, of the Near East Relief, who says "the Turks appear to be working on a deliberate plan to exterminate the Christians in their territory." We are informed by Dr. Ward that—

"The condition of the Greeks is as bad as that of the Armenians. There are approximately 500,000 of these people in Turkey. They have retained their religion. They are now being indirectly massacred by the thousand. They are not permitted to leave the country, and are being deported from the coast to the extreme interior under conditions under which they can not survive. During the winter one band of 20,000 was

driven through Kharput. From Diarbekir, our last station, only a hundred miles farther, I learned that only 10,000 passed there. Probably not a thousand reached their destination. These deportations are going on constantly."

At about the same time the British Government received this telegram from the British High Commissioner in Constantinople:

"Further reliable information received from American relief workers shows that the whole Greek population, men, women and children, from the age of fifteen upwards, of the Trebizond area and its hinterland is being deported, apparently to labor battalions at Erzerum, Kara and Sar Kamash. There are numbers of Christian women and children in deplorable straits in Trebizond, who have been driven out of their villages."

In addition to these deportation horrors, avers Dr. Ward, the rights of foreigners are completely disregarded by the Kemalists. In one instance, writes Norman W. Baxter in the *Brooklyn Eagle*, the Turkish Nationalists seized 40 per cent. of American Relief stores at the port of debarkation, another 40 per cent. along the route to the organization's headquarters, and the balance before that destination was reached.

The Turks, on the other hand, maintain that Greeks and Armenians have been guilty of atrocities. It is to get at the truth of the matter that the four governments are to carry on a joint inquiry. Said Secretary Hughes in his note to Great Britain:

"In view of the humanitarian considerations which are involved and of the desire of this Government to have adequate information through a thorough and impartial investigation of the actual conditions prevailing in Anatolia in order that this Government may determine its future policy in relation to the authorities concerned, the President is prepared to designate an officer or officers to take part in the proposed inquiry. . . .

"In order to expedite the inquiry, it was at the same time suggested by this Government that officers should be designated by the respective Governments to institute inquiries concurrently in the districts respectively under Greek and Turkish occupation, and that these two commissions, upon the completion of their investigation, should unite in a comprehensive report."

"This acceptance by the United States marks a definite, if small, step forward in the handling of the Turkish situation," declares the *New York Globe*; "it marks an effort on the part of American and European governments to get beyond a religious bias." "It is good news that Turkey is to be investigated," agrees the *New York World*; "it is even better news that the United States is to take a hand." "The inquiry," asserts the *New York Evening Post*, "is a warning that Christen-

SISYPHUS.

—Knott in the Dallas News.

BOTH HAVE THEIR TROUBLES.

dom is aroused, and its moral effect should be immediate and decisive." The Manchester *Union* also approves of the inquiry.

Those editors who oppose our participation in the inquiry point out, in the words of the Pittsburgh *Gazette-Times*, that "Great Britain, France and Italy could control the Asia Minor situation if they would." "American inquiry, in conjunction with these nations, can do no more than confirm American reports already made," notes the Boston *Herald*. And if Kemal, for instance, should be found guilty, asks this paper, "would these four nations think of sending armies into Asia Minor? Should America be induced to send an expeditionary force?" If not, then what will the inquiry accomplish? According to Edwin L. James, Paris correspondent of the New York *Times*:

"To investigate the situation and to fix the blame and to leave it there would be futile and inane. To draft a report and publish it broadcast would have as much effect on the Angora authorities as water on a duck's back. Moreover, the Greeks deny all the charges against them.

"The same Powers which now undertake the investigation undertook one in 1919. The report on it said the charges of cruelty against the Greeks were well founded, but nothing was done; and that this kind of inquiry without penalties is worth nothing is proved by the present necessity for another inquiry. Inasmuch as it is presumed a man so practical as Mr. Hughes would not lend himself to any such useless proceedings, one is free to speculate what is to be done about the matter after the facts are in hand. Unless something is done, there is no use investigating, it is held here.

"Suppose the investigators find that the Turks have been to blame. What is to be done? Suppose the investigators find the Greeks to blame. What is to be done? Get the Greeks out of Anatolia, you say. Well, that undertaking is political if anything is.

"Suppose both the Turks and Greeks are found guilty. That will doubly complicate a solution. You have the Greeks in Anatolia at the behest of the English, and you have Mustapha Kemal fighting to get them out and being backed by the French.

"If the inquiry is to amount to anything, the wound must be healed by political treatment. Unless Washington is going to ship enough soldiers into Asia Minor to protect those in danger, there must be a political arrangement to persuade those in control in the affected territories to change their habits."

BARLEYCORN'S RESURRECTION AS A BIG CAMPAIGN ISSUE

WHILE THERE ARE MANY MONTHS to Election Day, and public opinion is subject to change, recent events have shown that the Prohibition issue will be of importance in the Congressional elections this fall. In fact, well-informed Washington correspondents, such as David Lawrence and W. W. Jermaine, told us in April that the greatest of all battles between the "wet" and "dry" forces of America is to be fought during the next few months. And now we find editors from all sections of the country agreeing as to the importance of Prohibition as an issue. Henry Ford's weekly, the *Dearborn Independent*, and Mrs. Peter Olesen, of Minnesota, Democratic nominee for United States Senator, agree that Prohibition is not a live issue; in the words of Mr. Ford's *Independent*, "it is as dead as slavery." "But what they mean," interprets the liberal New York *Telegraph*, "is that they hope Prohibition will not be an issue. The truth is, in Mrs. Olesen's State it will be the issue."

Every day, continues *The Telegraph*, which is frankly "wet," "evidence accumulates that a referendum is to be had upon the Volstead Act." And we find this statement echoed in many of the country's leading papers. The Cleveland *Plain Dealer*, for instance, which fought for State and national prohibition years ago, admits that "from the standpoint of either wet or dry, the entire country faces a critical contest." "And this is as it should be," declares the Boston *Post*, "for in no better way can public sentiment be ascertained."

"One of the storm centers next fall," we are informed by the Springfield *Republican*, "will be Massachusetts": "The referendum on the new State enforcement law, which now seems assured, will make this State a battle-ground." Others will be New Jersey, where Governor Edwards is running for the United States Senate as an avowed "wet," and New York, where dry-law enforcement is admittedly difficult, and where the hotels suffer so from hootch-selling restaurants that they

have asked the authorities to enforce the law in the latter places.

It is the announced intention of the wet forces, which are well organized in at least ten States, to elect a "liberal" Congress and to defeat Congressman Volstead, who, they assert, is the author of all their woes. To bring about these results there are some twenty organizations in the field. The dry forces, on the other hand, with twenty or more organizations and a \$2,000,000 fund, are out to keep dry Senators and Representatives in Washington, and to add to their number if possible. Already they have announced their antagonism to Senator Calder, of New York, who expects to be reelected this fall, but have intimated that Assistant Secretary of the Navy Roosevelt would be acceptable.

Representatives of eleven States, meeting in Milwaukee at the Anti-Saloon League Conference, united in promising their aid to Congressman Volstead this fall. Nor are Governors of States to be overlooked. State Senator Runyon, of New Jersey, Republican candidate for the nomination for Governor, is to be aided by dry adherents, because he has declared for rigid enforcement of prohibition. But Wisconsin will be the storm center for an attack upon prohibition at the polls, announces Wayne B. Wheeler, general counsel of the Anti-Saloon League. Altho stiff fights will be carried on in half a dozen other States. In Wisconsin the wet candidate for Governor, backed by brewery and other wet interests, will find the dries camped upon his trail.

In Texas the League of Women Voters already have obtained the promise of the Senatorial candidate that he will vote against any amendment to the Volstead Act that will legalize light wine and beer. In other States, writes a Washington correspondent of the *New York Times*, "the wet and dry forces are lining up for a campaign that promises to be the best organized and most sturdily contested struggle staged in this country in many years.

such a broad field and in sections of the country where the public attitude is so essentially different that it is necessary to visualize the whole political outlook to get at the facts and possibilities. In some sections the struggle will be picturesque, even spectacular, and the issue hard to determine beforehand. In others

it will not be much more than a skirmish. It is easy to predict the result in such States as Maine, Vermont, Alabama, South Carolina, Kansas, Nebraska, the two Dakotas, Iowa and Mississippi. If any wet votes are cast there, it will not take long to count them. But it is a different story in Massachusetts, New Hampshire, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Kentucky, Ohio, Illinois, Indiana, Missouri, Texas, Louisiana, California, Montana, Minnesota, Wisconsin and Tennessee.

"In Illinois the advance guards already have taken up outpost positions. Practically every district in the State will be the scene of a clash, but the big fight is coming in the Peoria District, where Clifford Ireland, the present member, recently was defeated by Edward Hull, who carried the wet banner in the Republican primary.

"Ohio will be another hotly contested sector; the dry forces are against Senator Pomerene (Dem.). Republicans in the Senate agree with their Democratic colleagues that the senior Senator from that State is one of the ablest and cleanest men in public life. But Senator Pomerene has contended that Prohibition was a matter for the States and not the national Government to decide. Altho a teetotaler, in the Senate he voted according to his own best judgment, and because he did so the dries have marked him for defeat.

"In New York and Pennsylvania the wets will contest every inch of ground. They hope to make substantial gains. So far as Prohibition is concerned, the fight will be non-partizan. Where a Democrat is a dry the Anti-Saloon League will support him, and where he is wet, it will seek to accomplish his defeat.

"The fight in New Jersey, as in New York and Pennsylvania, will be hard fought. The dries will back Senator Frelinghuysen against Governor Edwards. There is not a man in the United States whose defeat the Anti-Saloon League would more gladly bring about than that of Governor Edwards. They are going into the struggle against him, determined to make every vote count. It is the same story in the Congressional districts, where the party that nominates a dry will get the Anti-Saloon League support.

"Senator Henry Cabot Lodge of Massachusetts, up for reelection this year, will not find his picture on any of the walls in Prohibition headquarters, for in the last session of Congress Senator Lodge was one of the small group of Senators who fought the so-called 'Volstead, Jr., law.'

"In Rhode Island, where Senator Peter Goelet Gerry hopes to

They are interested in just one thing—whether a candidate is wet or dry. Whether he is a Republican or a Democrat doesn't matter." Continues this writer:

"The wet and dry campaign of 1922 is to be conducted over

win in November, he will be opposed by the Anti-Saloon League.

"The dries are waiting for Senator du Pont of Delaware to take a stand. They assert that up to now the Senator has not made his position plain. The situation in Delaware, so far as the Senatorship is concerned, will depend to a great extent on the Democratic nominee. The candidate who can pronounce 'Volstead' best will get the dry endorsement. When the Democrats settle on a candidate and Senator du Pont comes off the fence, the dry-and-wet question, so far as it applies to Delaware, will be clear.

"The Maryland outlook is the same as in Delaware, so far as the Senatorial situation is concerned. There will be a battle in every Congressional district. Some of the wettest members of the present Congress are from that State, and all of them are running for reelection.

"Out in Missouri another battle is in the making over the Senate seat of James A. Reed. The dries are fighting Reed for the nomination, and if he wins they will just as bitterly oppose him in the general election.

"Senators La Follette in Wisconsin and Johnson in California also are on the wrong side of dry favor, but even the Anti-Saloon League entertains no serious hope that either can be defeated."

"The 'wet-or-dry' question is the big issue at present," agrees the *Baltimore News*, while the *Albany Knickerbocker Press* advises those who believe in real prohibition to "gird their loins for a battle such as they have never before had to face." For, as the *Tulsa Tribune* observes, "it is becoming plain

that there is still some fight left in the wets. In fact, elections in many places this fall will hang on the question whether it is advisable to modify the Volstead Act." Moreover, darkly hints the *New York Evening World*, which is avowedly wet, "there is likely to be a revelation," and the *Boston Post* ventures this political forecast for November: "Possible wet weather in sections where there has been a long dry spell." As the *New York Herald's* Washington correspondent writes:

"Congressional candidates in New York must face the wet-and-dry question as one of the big issues in the coming election campaigns. Reports from all over the State indicate a growing demand on the part of the voters for a showdown on the Volstead Act. Many candidates have declared themselves one way or the other in maneuvering for position. Others are being reluctantly forced to admit that Prohibition did not die as an issue with the enactment of the Eighteenth Amendment."

It will be recalled that as far back as 1920 there were sporadic efforts to make Prohibition a political issue. And there have been many attempts made since. In one an effort was made to kill two birds with one stone by advocating using the money raised through taxing the liquor interests to pay the soldiers a bonus. But heretofore, points out W. W. Jermaine, Washington correspondent of the *Seattle Times*, there has been no national organization, no money for campaign expenses, no harmonious understanding of just what should be done."

"TREASON" AND REASON

THE NAME OF WILLIAM BLIZZARD, West Virginia miner, has been added to the few who have been tried in the United States for treason. Like most of the others, he was acquitted, yet, notes the *Washington Herald*, "there is plenty of reason to fear that if the case had been tried in Logan County he would have been found guilty and given the severest sentence possible on the treason charge." That any fair-minded jury must acquit the youthful official of the United Mine Workers of America was obvious from the first to *The Herald*, the *New York Times*, and other papers, and why the

indictment for treason was brought is more than *The Times* can understand. "Attorneys for Blizzard," caustically observes the *New York Evening World*, "might have claimed that the crime charged was impossible, because no Government existed in West Virginia against which treason was possible." "In fact," agrees the *New York Herald*, "Government in West Virginia had broken down, and its power had passed in part to the mine operators." The leaders of the union miners who marched against Logan and Mingo counties, last August, according to this paper, were manifestly trying to take the law into their own hands, "which the non-union coal operators, controlling the local government in the two counties, already had done."

Copyrighted by Underwood & Underwood.

A CLEAR SKY FOR BLIZZARD.

William Blizzard, with his wife and children, Marjorie and William, Jr., led the United Mine Workers' parade in Charles Town, in celebration of his acquittal.

In the opinion of the conservative *New York Times*:

"Whatever their offenses, the unionist miners and their leaders were not trying to subvert the Government of West Virginia in whole or in part. Logan County can scarcely be said to have been under the rule of law or to have had a republican form of government. Private war was answered by private war. Some constitutional guaranties appear to have been suspended by conspiracy of non-union operators. If there was any 'treason,' it was on both sides; but there was no excuse for charging the leaders of the misguided invaders of Logan County with the highest of crimes."

Treason, however, is one of the most difficult crimes to prove. The offense, under the laws of West Virginia, must be established by an overt act, which must be testified to by two witnesses. Moreover, ruled the Judge at the Charles Town trial, since an indictment for treason had been brought in Logan County, only overt acts committed by Blizzard within that county could be regarded as evidence of guilt. It was the contention of the prosecution in the trial, which began late in April and lasted nearly five weeks, that several thousand West Virginia miners engaged in a demonstration against the non-union operators of Logan and Mingo counties; that they seized railway trains and automobiles, and waged a battle against State policemen, deputy sheriffs, and other State forces on Blair Mountain, and surrendered only to Federal troops. Blizzard

maintained the prosecution, was in touch with the miners during their advance into Logan County, and during the four days' battle of Blair Mountain. The prosecuting attorneys, reports George Wood, staff correspondent of the *New York Globe*, were not the Attorney General of the State, or the district attorney of the county in which the trial was held, or the district attorney of Logan County, in which the indictment was found, but attorneys for the coal operators.

The miner, on the other hand, had the backing of the United Mine Workers, with its retinue of lawyers. It was their contention that Blizzard did not go into Logan County with treasonable intent, but to induce the miners to abandon their march; that the gathering of miners was first of all to aid in forming a constitutional league for the purpose of restoring civil liberty in the State by political action. As for the battle of Blair Mountain, that was forced upon the marching miners by State police, according to the version of the defense lawyers.

"In a large measure the State of West Virginia was on trial in the Blizzard case," remarks the *Duluth Herald*, "and the verdict of acquittal as to Blizzard was equivalent to a verdict of 'guilty' against the State." According to *The Herald*:

"The State Government was clearly in alliance with the employers against the strikers from the beginning. A State which allies itself unfairly with one class against another invites what, when it happens, it is likely to call 'treason'. The State has no business in any labor controversy except to preserve order; and it can not take sides with one or another, even under the guise of preserving order, without making itself at least in part guilty of what comes of it."

The *New York World*, too, blames the State Government:

"The State of West Virginia is itself responsible for the abuse of power in Logan County. Because it has failed to interfere with the operators' government it is responsible for the disorders induced by that government. Whether or not William Blizzard was involved in the armed march, his action was assuredly not treason. It can not be treason by any definition to rebel against a denial of constitutional guaranties."

But it is just as well that the case was tried, thinks the *Washington Herald*. Many editors believe that since Blizzard was acquitted the cases against the other miners will either be dropped or postponed until fall.

Meanwhile, the *New York Globe* notes—"the government of West Virginia will probably take measures to dissociate itself from the operators who so nearly succeeded in making themselves the State."

Nevertheless, maintains the *Baltimore Evening Sun*, "those who have talked to the coal operators of the West Virginia fields know that they have a case. They have a case in which doubtless some of the fundamental tenets of Americanism are involved."

FROM BUCKET-SHOP TO JAIL

THE FIRST CONVICTION in New York State of a bucket-shop operator, and his sentence to Sing Sing prison for grand larceny, marks, in the opinion of the *New York Herald*, "what ought to be the start of a long procession of such creatures, little and big, to State's prison." Moreover, agrees the *Philadelphia Public Ledger*, "it shows what can be done if the authorities and the defrauded public cooperate." Financial writers have estimated that the bucket-shops of New

York City despoil the people of the United States of at least \$100,000,000 a year. Early in the year thousands of victims revealed their losses to the District Attorney of New York, who immediately began prosecutions. At one time there were more than thirty firms under investigation, with total losses estimated up to \$50,000,000. The first conviction was made possible, as *The Herald* explains, under a ruling of the United States Supreme Court which refuses to allow a Federal Court bankruptcy proceedings to "be a shield for such flagrant crookedness as bucket-shop operations." Since it formerly was the custom of bucket-shop operators to take refuge in bankruptcy proceedings and receiverships, and thus keep their books beyond the reach of prosecuting attorneys, the handicap under which these officers worked prior to the Supreme Court ruling can easily be seen.

What is a bucket-shop operator, or "bucketeer," as he is often called? The staid and formal definition of the dic-

tionary is that he is one who operates a shop which uses the terms and outward forms of the exchanges, but who has no intention to deliver or receive securities. Newspaper editors are less charitable in their definitions. "He is a sure-thing bettor," asserts the *New York World*, while in the opinion of the *Providence Journal* he is merely "an ordinary thief, and should be prosecuted as such." As this paper explains:

"The unwary customer takes his money to the bucket-shop in the confidence that it will be used for the purchase of stock. As a rule, of course, the intended investment is only a speculative and marginal one, but if the margin is accepted as sufficient it is the broker's duty to make the purchase. No purchases are made in a bucket-shop, nor are sales. The customer pays for a service which he is told has been rendered, but which has not been."

"Unless the law takes a hand, the operator can not well lose," notes the *New York World*. In the recent conviction and sentence of the New York "broker," who, according to the judge, "entered into a scheme to fleece people in modest circumstances out of their hard-earned savings," a "small fish" was caught; "but," predicts the *Philadelphia Public Ledger*, "when the prosecuting authorities hale into court some of the big men, and make a serious effort to convict them of bucketing, this sort of thievery will not be so common as it is to-day."

THE FOOL TRAP.

FOREIGN - COMMENT

ENGLISH PRESS ON BRITAIN'S OFFENSIVE IN IRELAND

IN THE FIRST OFFENSIVE of British troops to drive forces of the Irish Republican army from the Ulster borderland, we are told that infantry, cavalry, artillery, and whippet tanks took part, and some English journals deplore this "new invasion of Ireland as unnecessary and designed for political purposes." But we find other English newspapers praising the Government for taking the only practical step toward clearing up the chaos in Ireland. England did not settle the Irish problem when she yielded the Free State Treaty, they say, rather what she really did was to set up a new British problem. Such a remark piques interest in the general attitude of the English press on the subject of Ireland, where the conflict of North and South and of Free Staters and Republicans we have previously treated in citations from the press of all Ireland. In England such a pro-Ulster and rampant Tory organ as the *London Morning Post* declares that the agreement between Michael Collins, head of the Provisional Government, and De Valera is a plain token that the Free Staters have "openly joined with the King's enemies." The Provisional Government give as "a plausible explanation for the sinister bargain" which they have struck with the De Valerists that "it was necessary to form a coalition with the Republicans in order to curb the Communist party." So they say, *The Morning Post* tells us, but—

"We have good reason to know, that the two factions of Sinn Fein have come to a perfect understanding, not for the suppression of Communism, but for the establishment of a Republic over the whole of Ireland. The campaign for the overwhelming of Ulster has been elaborately worked out; and it is to begin with wholesale *sabotage* by sections which have been specially detailed for the work, and have already been sent to Ulster with the necessary equipment. If British Ministers are unaware of these things, it is because they are afraid to know; and for that reason they may be expected to swallow without a gulp the make-believe that the Treaty has been again violated simply in order to deal better with the terrible danger of Sovietism. We warn the public against being misled by any such false pretenses."

The *London Outlook* thinks that in the agreement between the Irish Provisional Government and the Irish Republicans Mr. Collins "surrendered" to Mr. De Valera, and it quotes Sir James Craig's remark that Michael Collins is "not big enough" for the job of piloting the Provisional Government against the opposition of the Republicans. It is to be feared, according to this weekly, that Mr. Collins has "conceded his whole position to those who have proved stronger than himself" and we read:

"He can hardly be considered any longer as even the nominal head of affairs, and we doubt whether he will be any more effective as a brake than as an instrument of political progress. He has had his chance and failed. It may be said that if the Free State intends to ruin itself it must ruin itself. England has given it the freedom for which it asked, and it is not for us to interfere; it is at least becoming evident to Irishmen, as to the rest of the world, that the troubles of the island were not solely the fault of alien and unsympathetic rulers. On our side, at least, our word is our bond, and we shall not return unless we are asked. But if the Free State, having ruined itself, attempts to ruin Ulster as well, intervention will become immediately necessary."

The *London Times* blames the Provisional Government for failing to impose observance of its agreement with the Northern Government on the Irish Republican extremists, and it points out that—

"That failure does not, however, acquit this country of its obligations to the Northern Government as they are recorded in the Treaty. In no circumstances will a positive policy of aggression upon the rights that Treaty secures to Northern Ireland, whatever its source or authorization, be tolerated by public opinion in this country. Under its terms two self-governing States are established. Each in its own affairs is constituted a law unto itself; but the pursuit by either of a policy of forcible interference with the other must array the British people, with all its resources, behind the solemn pledge the Government has given in its name. So serious has the situation in Ulster become, that the effect of the new agreement between the Provisional Government and Mr. De Valera upon it is of the first importance. On the surface it would seem that Mr. Griffith and Mr. Collins have only found peace by a surrender of their position, and that the election in June will be little more than an empty form. At that election Ireland was to have decided whether she accepted or rejected a Constitution based upon the Treaty. Now it is apparently proposed to withdraw that question from the people, and to establish an Executive in which the Republicans will have a voice virtually equal with that of the pro-Treaty party. We fully realize the immense importance of instituting a Government that shall be strong enough to restore order in Ireland; but we fail as yet to see how Ireland's will in regard to her future relations with this country is to be ascertained. Within the limits of the Treaty her methods of governing herself are her own affair; but no Government can be established upon a permanent basis, unless it conform to the principles the Treaty lays down."

A world-famous English newspaper of Liberal tendencies, the *Manchester Guardian*, sums up the situation in these graphic lines:

"The tall talk on both sides about the necessity for provocative preparations, in order to repel invasion by the other, is not merely rubbish; it is known to be rubbish by every intelligent European

or American who reads a reputable newspaper. The enormous majority of plain men and women on both sides of the border want nothing more than to get on quietly with their work—the one supreme service that at this moment any Irishman can do to Ireland. The whole world knows, and can not be kept from knowing, what the real trouble is. Each of the Irish Governments has got on its premises a vicious gang whom it can not keep from murder and arson. So far both Governments have broken down. How far exactly it is the fault and how far merely the misfortune of either is harder to say. But the actual breakdown, the failure of the Craig Ministry to protect Catholics from wholesale murder in Belfast and the failure of the Collins Ministry to prevent raiding and arson on the Ulster border are as gross and palpable as a pair of mountains. The only honest and really patriotic policy for either is to get its own house into order. The temptation is to slur over the offenses of its own least worthy citizens or followers, to ignore the existence of a decent and well-intentioned majority on the other side, and to lump the whole of the other side loosely together as ‘the enemy’ and as accomplices in the guilt of its criminals. That is true demagoguery, the basest burlesque of democracy, the telling of maddening falsehoods and half-truths to the people, and the betrayal of the people into the miseries that must come of the madness thus engendered.”

Another Liberal organ, the London *Daily News*, calls the Government’s action in sending troops into Ireland a “deliberate attempt to engineer an invasion of Ireland through Ulster.” Ulster is in no danger from the south of Ireland, it assures us, and the whole business is “faking a crisis for political purposes.” Casting criticism of the Government’s past policy aside, the Conservative London *Spectator* makes the following bold proposal:

“What we ought to do, now that the men who signed the Treaty of Peace have gone over to the side of the Republicans, can easily be stated. We ought, *at once*, to declare the Treaty void, and then to put Southern Ireland outside the Empire and treat her as an Independent State. We should do this by our own act and not by means of negotiations. We must, however, insist on certain conditions. The Loyalists of the South must be given the right, if they so choose, to remain British subjects. If they ‘opt’ for British citizenship, they must receive the fullest compensation in respect of such property as they can not take with them. If the Irish Republic refuses to meet these obligations, *we must pay the compensation ourselves and exact it, as we easily can*, from the Irish State. The way to do this is to impose on all South Irish agricultural and other produce sent into this country an *ad valorem* duty of 30 per cent., *if necessary*. Ireland can not avoid paying this impost. She can not send her produce elsewhere. She can not consume it herself. To give up producing for our market would ruin every farmer in the South. We, on the other hand, can get all *we* want from elsewhere, *i. e.*, from Canada, if Ireland ceases sending us bacon and eggs, cows and horses. South Irish produce is worth some £240,000,000 a year. A 10 per cent. duty would be enough to pay interest on 500 millions. That will suffice for a good deal of compensation, but, if necessary, we can make it a 30 per cent. duty.

“As to protecting the Northern State from raids and murder, there will be not more, but less difficulty, if we do not engage in the sorry farce of pretending that Southern Ireland is in the Empire. With South Ireland an Independent State the task of forcing her to behave herself will be much easier than now.”

Meanwhile London dispatches advise us that Mr. Collins and Mr. De Valera have issued a joint statement declaring their intention to stand by their pact, despite the objection of the British Government to the deal between the Free Staters and the Republicans.

GERMANS ON A SPENDING SPREE

THE TRADITIONALLY THRIFTY GERMANS are spending their money fast in the purchase of necessities, we are told, because it seems no longer profitable for them to hold it, in view of the constant decline of the mark. The German income does not justify the people in buying so largely, a Dresden correspondent of the Manchester *Guardian* writes, but “they deliberately consume their capital, afraid that they will have to spend still more of it if they wait any longer.” He offers price quotations from the *Dresden Anzeiger*, based on official reports, of retail prices of foodstuffs in the Dresden markets on December 15, 1921, and on April 6, 1922. These figures show the price increases and the percentage of increase in three months and a half, during which time, it is pointed out, the dollar has jumped from 200 to 300 marks, that is, fifty per cent.

	Prices given for pounds. of average quality, in pf'nigs.		Per cent.
Wheat flour (allowanced)	225	—	425 = 81
Black bread (allowanced)	200	—	345 = 72
Black bread (free trade)	300	—	567 = 89
Beef	2,100	—	5,200 = 150
Veal	2,300	—	5,000 = 118
Mutton	1,700	—	4,250 = 150
Pork	2,600	—	4,400 = 70
Bacon	3,800	—	5,400 = 42
Saveloy (German sausage)	3,600	—	6,000 = 66
Turkeys	1,650	—	3,250 = 100
Carps	1,600	—	3,000 = 90
Haddock	625	—	1,200 = 100
Sole	2,100	—	9,500 = 450
White cabbage	160	—	500 = 300
Potatoes	140	—	290 = 110
Carrots	110	—	340 = 300
Peas	535	—	810 = 55
Butter	4,900	—	7,600 = 65
Swiss cheese	4,200	—	6,600 = 55
Coffee	5,250	—	10,100 = 95
Tea	5,800	—	11,400 = 95
Sugar	520	—	1,100 = 100
Methylated spirit (liter)	665	—	1,350 = 100
Milk (the liter)	500	—	650 = 30

The buyer’s strike, practised by wide circles of Germany’s population from the time prices first began to rise during the war, has broken down and we read:

“Now a further postponing of replenishing the cupboard, wardrobe, and linen-chest (its contents having been chiefly spoiled by the long use of poor substitutes of soap) has become practically impossible. This moment unfortunately coincides with an unprecedented rise in prices and the extraordinary depreciation of our currency. With the customary thoroughness of the Germans they now abandon their long-cherished optimism and belief in the bettering of conditions; they turn now to a black pessimism. It is quite frankly said and written in newspapers that the dollar will in a short time be worth 500 marks. This conviction results in a hasty buying of all needed goods to an extent naturally enormous after the many years of refraining from purchases. Their bitter experiences make them meditate on their requirements in the coming weeks and months, and arouse their desire to provide for those days. This brings about buying on a far larger scale than has been the custom of the middle-class for many years. Hence the crowds now observable in our shops.”

HUNGARY'S POLICY IN A NUTSHELL

FOUR MAIN OBJECTIVES underlie Hungary's foreign policy, according to Premier Bethlen, and the first of these is the restoration of the economic independence of the country, and the renewal of economic relations with its neighbors, we read in a Budapest dispatch to the *Journal de Genève*. The second is the postponement of the question of reparations, because "Hungary is now incapable of making any payments." The third is aimed at securing the execution of the treaties which were signed by the major Powers with the states adjacent to Hungary for the protection of the rights of minorities in these states. The rights of minorities are placed under the high protection of the League of Nations, Premier Bethlen notes, but the League "does not yet seem to have succeeded in fulfilling its duties satisfactorily." This Hungarian statesman explained his country's interest in the matter as consisting in the fact that there are 3,500,000 Hungarians living beyond the frontiers of their country, and the rights of minorities, he argues, are "a matter of international obligation." Hungary's fourth objective is to "march side by side with those nations that are striving for disarmament in Europe," and Premier Bethlen is quoted further:

"Future evolution of European policy presents three possibilities. The dictatorship of the conquerors may be continued, in which case Europe will be ruined sooner or later, and the vanquished in the war will not be the only ones to go under. Or, a policy of peace, of justice, and of general disarmament may be inaugurated. Yet again, it is possible that we may see the inception of a policy based on the balance of power. One thing is certain, which is, that Europe ardently desires peace, for the victors themselves are struggling in a precarious economic situation. Alas, the sun of justice failed to rise at Genoa. It would seem that there is no wish to render justice to those peoples without whom it is impossible to accomplish the task of establishing a durable peace. Hungary to-day has only 8,000,000 inhabitants, but it is the center of an economic and intellectual gravity covering a much wider territory. The force of this gravity can not in any way be diminished, and of its own weight makes itself felt, and will continue to do so."

At the Hungarian General Election on June 4th, the press inform us, a large majority voted in favor of maintaining the Horthy-Bethlen régime, headed by Admiral Horthy, who has been regarded as the Regent since the Hapsburg monarchy was deposed. But it is pointed out that the Government has suffered "a severe moral defeat, as only three members of the Cabinet, numbering eleven, have been reelected."

WHAT MARSHAL FOCH SAID TO KING GEORGE

HISTORIC CONVERSATIONS are often classified with dubious legend, but we are assured that the words passed between Marshal Foch and King George V during the recent royal visit to Belgium and the graves in France are reported at too significant a moment and under circumstances too well covered by press correspondents to permit of doubt clouding their authenticity. On the plateau of Notre-Dame-de-Lorette, where lie buried twenty thousand soldier dead, we are informed that King George with "a very becoming warmth and cordiality" said to the Marshal: "Always good friends, are we not?" (*Toujours bons amis, n'est-ce-pas?*) And to this Marshal Foch replied, "in the same smiling fashion": "Always, Sire, for the same cause and for the same reasons." (*Toujours, Sire, pour la même cause et pour les mêmes raisons.*) Loud and prolonged applause naturally broke from the English press at this interchange of cordiality, remarks *The New Witness* (London), which says that everybody in England was pleased to note the friendliness of it, and "nobody in England seems to have noted anything further." This weekly goes on to explain that—

"The French intelligence is so clear that it looks shallow. It is like a swimming-bath in which the water is of such crystal-line transparency that we can see the bottom, and think we could paddle in it as in a puddle. Only when we step into it should we find ourselves out of our depth and drowning. The French have always had the power of saying certain absolutely simple things; things which are still simple even when we realize that they are also subtle. There is never so much truth in their irony as when that irony seems to be next door to innocence. The reply of Foch was quite straight and quite polished; as straight and polished as a rapier; but it had a point like a rapier. It had also, as all such utterances have, a quality whereby no other words express it quite so well as it expresses itself. But if we wished to translate that graceful conversation into a grosser and more argumentative language, it might perhaps be simplified to something like this. The first speaker says, 'I hope we agree,' and the second speaker answers, 'Yes, I hope we agree in—by the way, what do we agree in?'"

The truth is, continues *The New Witness*, the French Marshal's courteous and complimentary reply contains "the whole substance of the [Anglo-French] controversy in a singularly complete and compact fashion." The English and French are friends, or ought to be, it is asserted, in having the same cause and from

the same motives. The cause a very short time ago was "preventing European civilization from being overshadowed and terrorized by an outer barbarism," and it is further averred that the motive was the sense that the English "also were Europeans, and suffered from that threat to Europe." So long as the English care for the cause and act from this motive, they "must almost automatically continue to be the Allies of France," but this weekly contends that:

"Our journalists talk round and round the subject, trying to achieve by suggestion another view of the subject; trying to do it, above all, by perpetually changing the subject. But in truth it is, as twenty centuries have found it, an unchangeable subject. Through all that long stretch of history the men living close to the heart of our civilization have experienced again and again the passing but overpowering peril of a combination of barbarians. It is passing, because they never combine for long; but it is always nearly overpowering when they do combine. The combination of vague Slavonic and Teutonic tribes under the leadership of Jews and Prussians is a combination of that kind; nobody in England will as yet pretend that it is a combination of any other kind. The facts are too fresh in all our minds for even the politicians and journalists to attempt the serious white-washing of the Prussians and the Bolsheviks. They themselves were too recently engaged in the most furious vilification of the very same Prussians, and the very same Bolsheviks. You may teach the poetical people of England to loathe a mere name that they know nothing about; but you can not teach them to loathe it on Monday and love it on Tuesday. And in the case of the Prussians at least, it is not a case of an evil that we know nothing about. In the case of the Jews, who are the brain of the Bolsheviks, it is most certainly not an evil that we know nothing about. The politicians and journalists dare not tell us in so many words to support these two evils, in crushing things which they themselves have told us were good. Hence the bewildering inconclusiveness of everything that we are now told about Genoa or about Europe."

In sharp contradiction of this view, we may take the London *Outlook*, which some Frenchman has said, "sees only red when it looks at the tricolor," and here we find France held up to scorn as being infected with the old Napoleonic virus. Since the Middle Ages, says *The Outlook*, England has "contended against Spain, France, Germany, any and every nation that tried to do what Mr. Poincaré is doing now." We read then:

"If we are forced back upon the age-long principle to which we owe our greatness, the principle of the maintenance of the Balance of Power in Europe, it is not because we have not tried to replace it with something better. We supported the vision of a free Europe in which there should be no need for competing Alliances to maintain the peace. But the Junkers of France, determined since the Armistice to revive the glories of *Le Roi Soleil* and of Napoleon, have fought steadily, persistently, with consistent success, against all our efforts for international cooperation. . . . France, with the help of the French army, is to be the supreme master of the Continent at any cost. The French army will keep the peace, but it must be a French peace; the nascent Germany is a viper that had better be crushed in the egg; international cooperation, for aims however desirable in

themselves, must be fought, because internationalism means that France no longer rules, but becomes one among equals. The tricolor is to follow the path of the Napoleonic eagles. There will be plenty of 'glory' for a while—perhaps even for a decade or two—but every one who has ever read history with any sense of perspective knows that this sort of thing can not last. France tried once before to defy all Europe, and it brought her to the brink of disaster. History is sure to repeat, but before then it is within the power of France to bring ruin to the western world.

"What can England do about this? If French policy continues constant, sooner or later we shall have to ally ourselves with whatever elements of opposition to France may exist on the Continent or elsewhere. For the present, we should lose no time in announcing, clearly and definitely, that so long as France pursues her present course our paths are not the same."

The two London weeklies above mentioned epitomize two extremes of English political opinion about Europe. For an impression of more tempered feeling, we turn to *The Saturday Review* which reminds Britons that they signed the Treaty of Versailles "not in any undue haste but after lengthy deliberations," and this conservative organ adds:

"The position at the moment is that France and England together were responsible for drawing up a document which outlined a new arrangement of Europe. The force which they jointly command has enabled them to put their plans into operation. As a result, two of the ancient empires have been disrupted and a third contracted. Russia is now separated from Germany by a belt of new countries which have split off from her former entity. Austria-Hungary no longer exists. There are no less than nine new states—Poland, Czecho-Slovakia, Jugo-Slavia, Austria, Hungary, Lithuania, Latvia, Esthonia and Finland. It was virtually by the decree of France and England that these nations were brought

into existence, and it is by our joint prestige that they have been maintained. Is it possible to conceive that in place of the nineteen sovereign nations of pre-war Europe, no less than twenty-seven could exist to-day were it not for the authority which England and France exercise in common? Remember that the settlement was made in defiance of the traditions of the three old Empires, out of whom the new national lineaments have been carved. Such arrangements could never have been made without the prefatory humbling of Russia, Austria and Germany. If France and England, who together can wield the most terrifying power, quarrel, what becomes of this settlement of Europe? Is Germany going to maintain it? Is Spain going to take a hand? Is Russia? Let us look to the realities. We are embroiled enough; we are deeply involved in the establishments of the Treaty of Versailles. If England and France are divided, the new Europe crumbles like a heap of sand. It must not be; with the help of clear sight and common-sense, it shall not be."

The London *Spectator* stresses its contention that, without the cooperation of France, Great Britain "can not restore the economic foundations of Europe," and explains that modern finance and trade are too delicate and complicated for it to be possible "for either France or Great Britain to succeed if we work against each other." Misunderstanding or ignorance may temporarily obscure these facts, we are told, but "they are bound to assert themselves in the long run."

JOHN BULL AND MARIANNE SPATTING AGAIN.

"There are good marriages—but no perfect ones."

—*Cri de Paris* (Paris).

SCIENCE - AND - INVENTION

WHY THERE WAS NOT ANOTHER DAYTON FLOOD

IF THE CITIZENS OF DAYTON, OHIO, just after their big flood, had drawn a long breath, thanked Heaven it was all over, and had contented themselves with repairing damages and carrying on as usual, they would, in all probability, have had another big flood in April. On the 13th and 14th of that month there was a heavy rainfall, causing the greatest run-off since 1913. Under the old conditions, the Directors of the Miami Conservancy District report, the water would have reached the old danger marks at Dayton and at other points. A few more hours of rainfall would have caused panic in the valley. What actually happened? The water at Dayton was $9\frac{1}{2}$ feet high instead of 18—the danger point. There was so little approach to a panic that there were even few inquiries by telephone. In 1920, when there was high water, there were 2,100 calls in 54 hours. This time there were less than a hundred. The Miami Conservancy Works had been completed and every one knew that there was ample protection, altho this was their first test. Behind five big dams the water held back stood 19 to 40 feet deep. They kept back the equivalent of 36,000 acres of water one foot deep, and they are good for 23 times as much as this. The run-off channels through the city were carrying,

at peak flow, only 25 to 30 per cent. of their capacity. There was not another Dayton Flood, and there never will be one, because the citizens did something to stop it, says Charles H.

Photo by Engineering Division, Air Service. Courtesy of McCook Field.

HOLDING BACK THE FLOOD-WATERS.

Air view of Englewood dam and basin. The water behind the dam was 37 feet deep, yet only about 6 per cent. of the total storage capacity in this basin was being used.

Paul, chief engineer of the works, in a report to the Directors, a copy of which has been furnished to *THE DIGEST*:

"Everything worked out at the dams exactly as was expected. The things which made the most impression on the general public were, first, the visual evidence of actual storage back of the dams; second, the immense amount of storage capacity still available in the basins; third, the marked effect of the hydraulic jump, or stilling pool, reducing the high velocities at the conduit outlets; and fourth, the comparatively low stage of the rivers through the cities."

How the dwellers in the region feel about the results of the conservancy movement appears from an editorial in *The Middletown Journal*, from which we quote as follows:

"While practically every river valley in the Central West has been flooded during the recent heavy rains, the people of the Miami Valley have not so much as even been concerned over the danger of high waters, altho the run-off in the Great Miami River watershed was greater during the storms just passed than any time since 1913.

"The reason for this feeling of security is based upon the splendid demonstration of the Miami Conservancy flood prevention system, which has

THE "HYDRAULIC JUMP" IN OPERATION.

It releases the flood-waters at a rate that makes them harmless.

A FEW TYPES OF CUSHION TIRES.

functioned altogether satisfactorily in the first real severe test which it has undergone. And now the flood control works are practically completed, the conservancy officials assure the people that they are safe from all future floods for all time.

"The accuracy of the flood forecasts thus far sent out from Washington have been a factor in reducing the loss of life and property from floods in the great central section of the country. These forecasts have been made from a week to a month in advance, thus giving the threatened region a chance to make ready. Because of this, it is estimated that crops and other property valued at hundreds of millions of dollars were saved which would have been lost under other conditions.

"While flood anticipation is all very well and serves an excellent purpose, flood prevention like now prevails in the Great Miami Valley would be more effective. In the end the states drained by the Mississippi will have to engage in some general plan to hold back excess precipitation, and thus make forecasts unnecessary.

"And the eyes of that region, and in fact the entire world, turn to the Miami Valley for a model system to control the raging torrents that ever carry on their crest wanton waste and heartless destruction of life and property. Thank Heaven, it shall never be again, here."

From a pamphlet entitled "The Story of the Miami Conservancy District" (Dayton, 1922), we quote the following paragraphs:

"Before the wreckage was cleaned from the streets, the citizens, with the same courage and determination that marked the rehabilitation of their personal affairs, faced the problem of preventing the recurrence of such a calamity. Acting through the several Citizens' Relief Committees, funds were raised, and engineers employed to study the problem. Within sixty days after the flood Dayton alone raised a fund of two million dollars, twenty-three thousand individuals contributing. As the investigations progressed it became apparent that the difficulties in securing a satisfactory solution to the big problem were so great that the individual communities could not meet them alone, and that cooperative action of the entire valley was necessary.

"Ohio did not have a law that would permit a great cooperative undertaking of this nature. Consequently the Conservancy Act of Ohio was prepared, and passed by the Legislature, February 18, 1914. The first step was to survey the job. All the recorded floods were studied, rainfall records collected, the 1913 flood discharges carefully calculated, the probable frequency of floods determined, the capacities of the present channels computed, foreign flood prevention plans reviewed, flood and rainfall records in other watersheds compared with the Miami, and miscellaneous other matters investigated. A flood 40 per cent. greater than that of 1913 was decided upon as the maximum to be taken care of by the flood prevention works.

"The official plan provides five basins formed by building across the valleys five earth dams of the safest and most desirable type. Substantial concrete outlets, founded on rock and passing through the base of each dam, permit the ordinary river flow to pass unobstructed. The sizes of the outlets are such that at times of highest floods only such amounts of water will

escape through them as can be safely taken care of in the river channels below the dams. The excess water is held back by the dams and accumulates temporarily in the valley lands situated above them, to flow off later through the outlets as the floods subside.

"The construction is being paid for from the proceeds of the sale of \$33,890,909.83 worth of bonds, secured by the benefits appraised, and representing approximately 50 per cent. of the total benefits. The bonds will be retired by 1949, a portion being taken up each year."

RELIEF FOR JITNEY ROUGH-RIDERS

THE CUSHION—A CROSS BETWEEN the pneumatic and the solid tire—is now generally adopted for large motor omnibuses. These tires have openings in the solid rubber to make them more flexible—of different shapes and arranged in different ways in the various makes of tire. The different types are described and explained in an article entitled "Easy Riding on Heavy Motor Vehicles," contributed to *Bus Transportation* (New York). Of all factors influencing riding comfort, says the writer, the rim of the wheel is perhaps the most effective. His article has to do with the easy riding of buses with say twenty or more seats, operated on city streets or surfaced highways. On the smaller vehicles pneumatic tires are universally used. He says:

"The old-time motor truck was of the battering-ram type, a carrier of heavy dead loads, with practically no attention paid to the riding comfort of driver or other passengers.

"This early truck, which has long been superseded by improved designs, was fitted with solid tires, because they were the only type available. The tires were hard on the drivers, and harder on the pocketbooks of the owners.

"So something better was sought, and some fourteen years ago a cushion wheel, mounting the same solid tires, but with a flexible member interposed between the tire itself and the felloe of the road wheel, was put on the market.

"At about the same time a softer compound was tried, and this improved the riding qualities, altho at times the tire mileage was decreased, since the soft material wore away much more quickly.

"For bus service the tire must be strong enough to carry the required load; it must be as light as possible, since it forms part of the unsprung weight.

"The tires used on buses must first of all make for safety and comfort. Safety by not sliding, skidding or slipping. Comfort by being designed to absorb road shocks on bad roads, and to run smoothly and quietly on good roads.

"These requirements are not found 100 per cent. in any type of tire, but just so far as they are met is it possible to get riding comfort at all operating speeds, and economy in both fuel consumption and maintenance.

"In addition, each set, front and rear, has its own special needs. The tires on the front or steering wheels, for example,

should hold to the road either on the straightaway or on curves, should be able to climb out of ruts and over bumps, and should permit easy steering control. The rear-wheel tires should have width and flexibility to give driving traction at all loads and speeds; they should stick to the road so as to provide effective braking, and should carry away the heat generated at the surface of the tires.

"These conditions are met only with difficulty in solid tires, which have but slight resiliency and do not provide sufficient cushioning effect to absorb road shocks, or the vibrations caused by the vehicle itself.

"The first attempts to improve the riding quality of solid tires consisted of changes of tread form or of the rubber compound used. Now rubber, while it can not be compressed, can be squeezed out of shape. Instead of a solid band of rubber, the logical construction makes use, therefore, of openings or displacement spaces, where the rubber can flow.

"These tires are designed so that the area of road contact can change quickly and easily, thus providing a bearing in proportion to the load or road (shock) requirements.

"The combination, of soft compound and depressions, forms the basis of so-called cushion tires. The Mason tire has two rows of tread depressions, each being comparatively long and narrow. In Hood and Firestone cushion tires bars of rubber are built up between the outside sections of the contour.

"The Swinehart cushion tire has a tread filled with many small round holes. It is claimed for this construction that the holes close up at the point of road contact, thus forming a pneumatic cell, which prevents the picking up of stones.

"After providing notches or depressions on the outside, the next step was to open up the interior of the tires, and thus permit increased displacement. In the Goodrich 'semi-pneumatic' tire, an arch-shaped opening runs around the center of the base. The Overman tire has a triangular opening around the base, braced by a metal band.

"Another of the hollow-center types, the Good-year cushion, has an oval-shaped cavity, which is said to give a spring action independent of the cushioning power of the rubber itself.

"The K. F. & C. cord tire has staggered openings crosswise of the tire. The maker claims that these openings furnish resiliency, and radiate heat created by braking or by the action of the tire.

"Thus the cushion tire, or as it is sometimes called, the semi-solid tire, represents an effort to combine the durability of the solid with the easy riding quality of the pneumatic. The U. S. Bureau of Public Roads has tested many cushion tires and has found that as regards riding comfort they stand between the solid and the pneumatic, and that they offer a decided advantage over the solid in reducing the effect of impact.

"Other advantages of the cushion tire are its compactness, thus permitting a low floor level and center of gravity of the vehicle, and also the fact that air compressors, spare tires, detachable rims are unnecessary, and blowouts or punctures are a thing of the past.

"As regards actual application, a combination equipment is finding favor with many bus operators, that is, pneumatics are used on the front to protect the engine or the gasoline tank from vibration, and cushion tires on the rear.

"The maintenance of most cushion tires involves the same precautions in regard to overloading, operation in car tracks, over-speeding, trimming of cuts and aligning of wheels, as is required with solid tires. With the Overman tire, however, tread wear is compensated for by cutting off the outside, after the tire is run from 10,000 to 15,000 miles. It is said that this can be done by the driver in thirty minutes with the special tools furnished by the manufacturer."

The writer next takes up the so-called cushion wheel, which consists of a resilient member interposed between the tire and felloe of the wood or steel wheel. It is necessary, of course, that the cushioning element transmit the drive from the axle and carry a load. Its most important function, however, is to absorb shocks and vibrations. Side lurch must be provided for, and undue side sway of the body limited. Finally, the

cushioning material should not deteriorate with age, and its riding qualities should not be lessened by the heat from the brakes. He goes on:

"One of the oldest types of cushion wheel, the Sewell, is built up of two wooden felloes, between which is a rubber cushion, cut, top and bottom, by V-shaped grooves. These run across in a zigzag design, arranged so that as the pressure on the wheel changes, there is always an uninterrupted cushion between the two felloes.

"In the Morand cushion wheel, the cushion element is caged in steel channels, and is said to act in compression at the bottom and to form a suspension member at the top and sides. Thus the resilient effect is equally distributed to every part of the wheel.

"The Meade cushion wheel has a T-shaped band mounted directly upon the wooden felloe of the wheel. The upright leg of the inverted T prevents side thrust and undue side motion of the two rubber elements.

"WHEN A FELLOE NEEDS A FRIEND."

A friendly cushion of rubber between the felloes softens their jars and jolts.

"Four units, the wheel, cushion, locking ring and cushion-retaining rim, make up the Smith cushion wheel. When the four parts are assembled, all are held in place automatically and the wheel is ready for the pressed on tire. No bolts, keys or pins are used."

STEERING SHIPS BY MICROPHONE—During the war the location of the enemy by measuring the distance of his batteries by means of sound was carried to a high degree of perfection. Successful experiments have recently been made to apply this principle to the steering of ships in foggy weather and along dangerous coasts. This is accomplished, according to the *Zeitschrift des Vereins Deutschen Ingenieure*, in the following manner:

"The ship inquires its position by wireless from the coast station. The latter thereupon requires it to make a sound signal which is received by a series of microphones distributed along the coast. These microphones are connected by wire with some sort of indicator apparatus, such as an oscillograph. It is possible to cover a stretch of coast from 20 to 30 miles long in this manner. The sound signals are magnified to the required degree and the oscillograph records the time intervals between the signals from the various microphones, so that they can be read instantly even when only a hundred to the second apart. Distinct signals from three microphones suffice to indicate the location of the ship. In a recent test a point $4\frac{1}{2}$ miles distant from the Kiel Canal was measured with a precision within 100 feet."

LONDON'S MICROBE FARM

TWELVE HUNDRED different kinds of microbes are bred and fed in the National Collection of Type Cultures in London, called by David Masters, in an article in *Conquest*, "London's microbe farm." The "farm" is located in the Lister Institute at the top of a tall building on the banks of the Thames. It is, says Mr. Masters, a fine modern laboratory about 30 feet long by 20 feet wide. One side is of glass, and through it may be seen the chimneys and roofs of the metropolis, while under the windows for the whole length runs a working-bench or table. In the center of the room is a roll-top desk; a microscope, carefully screened from dust with a glass shade, stands on a table in a corner; at each end are cases, and near the door are a couple of incubators. Thus the microbe farm at first sight. It is under the direction of the Medical Research Council. He goes on.

"In this innocent-looking laboratory, with its air of peace, all the most diabolical diseases that torture mankind are confined. All the microbes are imprisoned in glass test-tubes, which are kept in various compartments in the glass cases near the door. They are prevented from straying out of their prisons—and other germs are prevented from breaking in—by little pieces of cotton-wool pushed into the mouths of the tubes. The tubes may be seen in their thousands, with the tufts of cotton-wool poking out of the tops, some of the tufts being white, some pink, some yellow, others a mixture of pink and purple.

"It is rather intriguing to see all these colored tufts of wool dotted about the cases. Actually these little spots of color dotted about are rather decorative, but their purpose is strictly scientific and useful."

What do you feed a deadly microbe if you wish to keep him feeling fit and in good trim? Well, here are the directions to be followed:

"There is an old saying that 'one man's meat is another man's poison.' Similarly, one microbe's meat is another's poison. The food that one microbe will thrive on would kill another sort of microbe. Dangerous as are all these microbes, they are worth more alive than dead, and so it is necessary to study their health by giving them the food they like. The base of all these preparations is agar, which is a jelly obtained from a Japanese seaweed.

"Some germs have a predilection for egg, and so they are given an egg flip in agar; the yeast germs thirst for beer, and are supplied with it, strictly according to the doctor's orders; some germs like a little beef tea and agar. Their tastes are very varied and the different-colored wools are used to indicate the sort of food they like.

"One dish, which certain germs love, is prepared in the following manner. A potato is peeled and cut up into pieces the size of knobs of sugar. These potato knobs are steamed for an hour and a half, after which the mixture is strained through a cheesecloth, and the starch that is squeezed out is added to the broth.

"A certain quantity of milk is then added, with 4 per cent. of agar, and the concoction is then steamed three times in order to sterilize it thoroughly.

"This mixture is put into test tubes, which are thoroughly rolled to distribute the starch evenly, after which the tubes are sloped and a tiny colony of germs that can not be seen with the

naked eye is placed on the grayish jelly to feed and breed. A tuft of cotton-wool of a certain color to stop the tube, and the banquet is complete. Strangely enough, some germs grow best in an upright tube, others thrive only when the tube is sloped.

"The eye of the Curator lights up as he talks about his pets. He walked to a case and picked out a tube. 'This is the plague,' he said calmly.

"I wondered what would happen if I dropt the tube on the floor. Then he went across to one of the incubators and picked out another tube. 'This is the 'flu,' he said, and I gazed with interest on the scourge that sets us all sneezing.

"It was just an amber-colored stain, branching out something like a seaweed, in a clear jelly. Nothing could have appeared more innocent, yet few things are more deadly. The stain in the tube was caused by countless influenza germs, enough to infect thousands of people with the most virulent form of the disease.

"'They're harmless enough here,' I said. 'But——'

"I handed back the tube, and the doctor placed it in the incubator. It seems strange to think of influenza germs catching cold, yet they can, and do, and if they catch cold they die. Thus, they are kept in the incubator at blood heat, where they thrive and multiply. The incubator is also used for breeding purposes. The microbe farm is not devoted solely to those germs that afflict humanity. The germs that wage war on plant life and cause such havoc among animals, and birds, and fishes, are also bred and fed in this laboratory at Chelsea.

"DOWN ON THE FARM."

The farmer who tends the countless flocks and herds of diabolical disease germs, Dr. R. St. John Brooks, and his assistant, Miss M. Rhodes.

"'Have you onion mildew?' I asked:

"The Curator went to a card index, and from thence to a case, from which he took a tube. It looked so harmless, yet I wonder how many millions of onions it has destroyed.

"'Can you show me tetanus?' I inquired.

"'Certainly,' said the doctor, and a moment later I held a few billions of the germs that cause lockjaw. If the tube had broken in my hand, and the deadly bacteria had entered the wound, I might have died a horrible death. I consoled myself with the thought that science, with its anti-tetanus serum, might have saved me, providing the injections were made in time.

"There are altogether some 1,200 different organisms in the collection—1,200 different microbes to be tended and fed on the farm—and in all about 6,000 tubes. Directly a new microbe comes along, its name is entered on a card, with particulars of whence it came and when it was isolated and by whom. Other particulars as to the pedigree of the germ are noted, so the Curator has only to look at the card index to find out all about it. Each organism in the collection is indexed in this way, a number is given it, and this same number is marked on the tube in which it is kept. Consequently it is possible to find any microbe without delay, and without any danger of mixing it up with some other microbe.

"Scientists and teachers are continually working all over the country, and frequently they require certain cultures to work on or show to students. Until a year ago there was no central British collection on which they could draw. Scientists did their best to supply each other, but often those engaged in research work were compelled to write to New York, Prague, Vienna, or Paris, for the culture they sought. Sometimes they could not obtain it even then. The new microbe farm obviates all this, and for a shilling or so—in certain cases no charge is made at all—the deadliest microbe that afflicts man or beast may be bought, comfortably housed in a test tube with a proper supply of food, and carefully packed in cotton-wool. Inquiries come from all over the world, and about 300 tubes are sent out every month.

"There is little doubt that the National Collection of Type Cultures is proving a great boon to science."

RADIO • DEPARTMENT

TAKE THE RADIO SET ON VACATION

THE RADIO AMATEUR SHOULD NOT FAIL to include his receiving outfit in his summer-vacation equipment, urges Mr. Pierre Boucheron in an article in *Popular Radio* (New York). There is no reason, he says, why any one need miss the radio programs, even tho their vacation carries them into the wilderness. It is a simple matter to make up or purchase a portable set, complete in every detail, which can readily find room in a suit-case.

In speaking thus, Mr. Boucheron is not confining attention to the fortunate few who are able to equip themselves with radio-amplifiers, using a loop antenna. He has in mind the rank and file of radio enthusiasts, whose equipment is of the usual type, requiring an outside antenna. And he gives some useful hints as to the practical management of such an outfit when taken to the country, with particular reference to safeguarding against lightning. We read:

"Summer-time radio is sure to become extremely popular. It offers a service unparalleled in its scope and usefulness. The vacationist has at once the news of the day, weather reports, music, lectures on the how-and-why of camping, and what not. It is assumed, of course, that the prospective radio-vacationist locates at a point not too remote from the nearest broadcasting station, otherwise he can not hope to secure good receiving results. In general, the details of erecting a portable radio receiving set are the same as those applying to city operation, except that it is perhaps not necessary to make permanent antenna and ground systems. A 125-foot wire stretched between two near-by trees for antenna, and a piece of pipe sunken into moist earth or dropt in an adjacent pond or stream, will form the ground.

"Aside from the outdoor use of radio during the summer months, there are some important protective details which must be followed by the broadcast enthusiast, no matter where the set is located, when he employs an outdoor antenna.

"How, for instance, can he protect himself from lightning?

"First of all by equipping his receiving set with a suitable lightning arrester. This is nothing more than a simple device similar in appearance to the plug fuse used in electric light circuit, and the National Electric Code insists that such device be employed in connection with receiving antennæ. This rule is somewhat the same as that which applies to protective devices for regular land telephone lines, telegraphs, fire alarms, and other signal systems. The arrester is really a simple appliance and is usually furnished with receiving antenna equipment, with full directions for installing. There are two general makes:

The vacuum type.

The fuse type.

The function of the lightning arrester is to divert to ground the heavy electrical charges picked up by the aerial during a local thunderstorm and thus protect the receiving instruments. In other words, the arrester drains off excessive charges from the receiving circuit. In general, there is no more danger of an actual

bolt of lightning striking the aerial than in striking an ordinary telephone or telegraph line. It is the heavy inductive effects induced in all metallic conductors by lightning which may damage the delicate receiving instruments or possibly shock the operator.

"A safe plan is further to protect the radio installation by grounding the aerial at each approach of a thunder-storm. This is best done by installing a large size single-pole, double-throw switch outside of the house where the aerial enters."

THE NEW FIRE REGULATIONS

AS WAS EXPECTED, the National Board of Fire Underwriters have issued amended rules applying to the installation of radio receiving stations. The new specifications, applying to receiving stations only, are of such importance that we reproduce them in full:

"a. 'Antennæ outside of buildings shall not cross over or under electric light or power wires of any circuit-carrying current of more than six hundred volts, or railway trolley or feeder wires, nor shall it be so located that a failure of either antenna or of the above-mentioned electric light or power wires can result in a contact between the antenna and such electric light or power wires.

"Antennæ shall be constructed and installed in a strong and durable manner and shall be so located as to prevent accidental contact with light and power wires by sagging or swinging.

"Splices and joints in the antenna span, unless

made with approved clamps or splicing devices, shall be soldered.

"Antennæ installed inside of buildings are not covered by the above specifications.

"b. Lead-in wires shall be of copper, approved copper-clad steel or other approved metal which will not corrode excessively, and in no case shall they be smaller than No. 14 B. & S. gage, except that approved copper-clad steel not less than No. 17 B. & S. gage may be used.

"Lead-in wires on the outside of buildings shall not come nearer than four (4) inches to electric light and power wires unless separated therefrom by a continuous and firmly fixed non-conductor that will maintain permanent separation. The non-conductor shall be in addition to any insulation on the wire.

"Lead-in wires shall enter building through a non-combustible, non-absorptive insulating bushing.

"c. Each lead-in wire shall be provided with an approved protective device properly connected and located (inside or outside the building) as near as practicable to the point where the wire enters the building. The protector shall not be placed in the immediate vicinity of easily ignitable stuff, or where exposed to inflammable gases, or dust, or flyings of combustible materials.

"The protective device shall be an approved lightning arrester which will operate at a potential of five hundred (500) volts or less.

"The use of an antenna grounding switch is desirable, but does not obviate the necessity for the approved protective device required in this section. The antenna grounding switch

if installed shall, in its closed position, form a shunt around the protective device.

"d. The ground wire may be bare or insulated and shall be of copper or approved copper-clad steel. If of copper, the ground wire shall be not smaller than No. 14 B. & S. gage, and if approved copper-clad steel it shall be not smaller than No. 17 B. & S. gage.

The ground wire shall be run in as straight a line as possible to a good permanent ground. Preference shall be given to water piping. Gas piping shall not be used for grounding protective devices. Other permissible grounds are grounded steel frames of buildings or other grounded metallic work in the building and artificial grounds such as driven pipes, plates, cones, etc.

"The ground wire shall be protected against mechanical injury. An approved ground clamp shall be used wherever the ground wire is connected to pipes or piping.

"e. Wires inside buildings shall be securely fastened in a workmanlike manner and shall not come nearer than two (2) inches to any electric light or power wire unless separated therefrom by some continuous and firmly fixed non-conductor making a permanent separation. This non-conductor shall be in addition to any regular insulation on the wire. Porcelain tubing or approved flexible tubing may be used for encasing wires to comply with this rule.

"f. The ground conductor may be run inside or outside of building. When receiving equipment ground wire is run in full compliance with rules for Protective Ground Wire, in Section d, it may be used as the ground conductor for the protective device."

Regulations covering sending stations have also been drawn up, and copies may be secured from The National Board of Fire Underwriters. Caution is given against experimenting with lighting circuits and other high-voltage systems. "It is reported that not long ago three children, at Aiken, South Carolina, were burned to death in a fire resulting from a short circuit in a radio transformer, and a New Jersey boy carelessly crossed the leads from his storage battery and started a fire that might have become serious, if it had not been promptly detected. It is because of such dangers that the National Electric Code requires all wiring to be in accordance with class of installation. The work should always be inspected before being placed in service."

A NEW RADIO CHAMPION

WHEN THE RADIO NOVICE HEARS for the first time the curious chatter of radiotelegraph signals, he is pretty sure to marvel that any one can make head or tail of such a singsong. The expert haughtily assures him that it is easy enough to read such signals; but in giving this assurance, the expert does not refer to signals coming at the rate of fifty words a minute. Only a few ears can be trained to catch telegraph signals out of the air at such a rate. The man who excels all others at the moment, according to the records, is Mr. Theodore McElroy, Radio Operator of the Boston Herald, who became world champion radio operator in a contest conducted in connection with the radio show at the Seventy-first Regiment Armory in New York City, on May 24. The New York Times gives this account of the contest:

"In a preliminary contest in which the competitors took technical matter at the rate of 42 to 46 words a minute, McElroy made 9 typographical errors and 6 telegraphic errors compared with 1 typographical error and 4 telegraphic errors by J. C. Smyth. At forty-eight words a minute McElroy made three typographical and two telegraphic errors, compared to twelve typographical and three telegraphic errors by Smyth. In the contest for speed as well as accuracy McElroy clinched his claim to the silver loving-cup by turning out perfect copy for two minutes at the rate of 50½ words a minute, taking press matter."

THE HUMAN BODY AS AN AERIAL

EVERY ONE WHO HAS OPERATED a radio-receiving set using electron tube amplifiers is aware that the human body has electrical "capacity," and that the sensitive tubes may be affected thereby. The use of metal shields to protect the tubes from the electrical influence of the operator's hand is familiar. Users of loop aerials have observed, also, that the receptivity of the coil may be very markedly modified by touching it with the fingers.

It must have occurred to many radio operators that the human body, which of course possesses inductance as well as capacity, might theoretically serve as an antenna. It remained, according to the report of *Radio Digest Illustrated* (Chicago), for a captain in the Air Service Reserve to make accidental discovery of the feasibility of practically substituting the body for the ordinary aerial wire. Here is the account of the way it happened:

"Radiophone operators have utilized a hundred different things for aerials to be used with their receiving sets. Ribs of raised umbrellas, a tin roof, the springs of a bed, the rain-spouts at the side of a house, and many other devices, all have answered the purpose satisfactorily. But now the discovery has been made that the human body is an antenna.

"Credit for this discovery goes to Capt. Donald H. Muse of the Air Service Reserve. Captain Muse was not making a radio demonstration at the time, but simply was entertaining a number of officers with a receiving set he has installed in his quarters.

"A concert was being broadcasted over WLW, operated by the Crosley Manufacturing Company of Cincinnati, manufacturers of radiophones, and Captain Muse had tuned in with excellent results.

"For a time the Captain and his friends were content to listen to the program of the evening. Then the owner of the set was seized by a fever of experimentation. It was while he was demonstrating some of the things of which his set was capable that he stumbled onto something which he himself would have thought was quite impossible.

"The ground wire of the set had been disconnected to demonstrate that the set would receive as usual. Then the Captain, his hands slightly moist with perspiration, unhooked a three-foot insulated copper wire leading to his outside aerial and by accident held the bare wire or exposed end of the wire between his fingers. To his surprise music, faint but audible, continued to reach his ears through the headphones.

"Hastily he removed the insulation from half of the three-foot copper wire and then tuned in his set to its most delicate adjustment. He divided up the available listening apparatus and gripping the wire firmly in his hand, told the guests to listen. They were amazed. Before their eyes was the set functioning without a ground connection, with the body of their host as an aerial.

"Captain Muse clamped a pair of headphones on his phono-

WORLD'S CHAMPION RADIO OPERATOR.

Theodore McElroy, who receives at fifty words a minute, and his silver championship cup.

graph so that the horn would act as an amplifier. Then he held the bare copper wire in his hand and the room was filled as if with distant music. He transferred the copper strand to his mouth and the harmony instantly was intensified by the more perfect conduction.

"He asked another officer to take hold of the wire with him and learned that the music came in stronger by virtue of the dual aerial. A third, fourth and fifth man attached himself to the wire and its non-insulated surface and the music became so strong that the doors of the phonograph had to be closed. When all the men let go of the wire so that it dangled in mid-air the sound stopt entirely."

RADIO SERMONS FOR PASTORLESS CHURCHES

THE SOUTH HAS BEEN THOUGHT rather backward in radio matters, but now we learn that down in Louisiana the initiative is being taken in an application of radio that will probably soon become universal. This is the broadcasting of sermons from an important church, to be received by congregations of numerous small churches at a distance. The church that is about to institute this practise is the First Baptist Church at Shreveport. In *Science and Invention* (New York) we read:

"The station will have a normal radius of 1,500 miles, but under favorable conditions may be picked up from coast to coast, and by ships at sea. It will use a 200-watt set, sending on a 360-meter wave-length.

"Sermons, lectures, choir and congregational singing, organ recitals, chime concerts, and a daily news service will be among the features available to those having receiving sets. The auditorium, the largest in the city, will be used as a civic center, and the world's most noted singers and lecturers will be heard here. Their programs and lectures will be broadcasted.

"Several hundred small churches throughout the Southwest, most of which have no pastor, are installing receiving outfits, and their congregations will worship with the congregation of the Shreveport congregation.

"The church, built at a cost of \$500,000, was dedicated Sunday, April 23. It is one of the largest Baptist churches in the world, having 51,000 square feet of floor-space and a seating capacity for 8,000 people.

"Eventually all the larger churches will broadcast sermons,

and who can tell but that this will not be the better method of listening to the preacher? Then every house will be a house of worship as well as a home, as it should be.

"Very expensive churches will no longer be necessary, but the minister who places his sermon in such a manner as to create more than usual interest will be the one to whom we will all listen."

RADIO FOR ANIMALS—Students of animal psychology will note with interest the efforts of an elephant trainer to teach his charges to receive orders by radio, so that they can go through their performance without apparent human direction. Experiments of a similar type have apparently been made by Mr.

Edgar C. Gause, of Kennett Square, Pennsylvania, his pupil being an English bulldog, which is reported to "listen in" with keen interest.

A photograph sent us by Mr. C. H. Thomas gives full assurance of the earnestness with which the pupil participates in the performance. Possibly Briggs, the cartoonist, would be best qualified to supplement the photograph with an interpretative series suggesting what the animal is thinking about.

HOW TO MAKE AND OPERATE A SIMPLE RECEIVING OUTFIT—The Bureau of Standards, of the Department of Commerce, has reissued Circular No. 120, entitled "Construction and Operation of a Simple Home-Made Radio Receiving Outfit," regarding which this comment is officially made:

"The construction of a very simple radio receiving equipment for radio communication on wave-lengths between 600 and 200 meters from high-power stations within fifty miles is described. This set may be constructed by any one from materials which can be easily secured. The total cost of this equipment need not exceed \$10. A single outfit, with a crystal detector and an inductor variable by steps, is used. Instructions are given for the construction of the crystal detector, inductor, necessary switches, antenna, and other parts. Certain parts, such as the telephone receivers, must be purchased. Directions for operation are also given."

This publication is now ready for distribution, and any one interested may obtain a copy by sending five cents to the Superintendent of Documents, Government Printing Office, Washington, D. C. The novice who wishes to install a simple and inexpensive receiving outfit, using a crystal detector (and therefore limited in range) can not do better than to secure and carefully read this circular. Even the more ambitious amateur will find many useful hints in the document; and it should be added that the greater part of the equipment can be used in the making of a more sensitive receiving apparatus, in which a triode (vacuum tube) is substituted for the crystal.

THE LINCOLN MEMORIAL

THE TAJ MAHAL IN INDIA has always stood as the supreme gem of buildings; Washington now claims its rival in the Lincoln Memorial, dedicated by President Harding on May 30. The two buildings, devoted to memorial purposes, are similarly fortunate in their settings. Reduplicated in the water that forms their foreground, the sun by day and the moon by night conspire to enhance their beauty. Designed by the architect, Henry Bacon, the Lincoln Memorial, has "not an unnecessary line, not a fault in proportion. Line and mass

the Potomac and beyond rise the hills of Virginia. Nearby is Arlington, where lie the remains of the men who under Lincoln's leadership went down valiantly into death that the national destiny might be served. To the east, nearly a mile away, stands in its austere dignity Washington's Monument, which is to be connected with the Lincoln Memorial by a great lagoon that will reflect both monuments. A mile beyond the Washington Monument is the Capitol. These three—the Capitol, Washington's Monument and the Lincoln Memorial—form the three great features of the Mall, the plan of which provides for walks and drives and rows of elms for the entire distance. It is a composition without parallel in any other city in the world."

Such is the outer shell designed to enshrine the Statue of Lincoln, conceived by Daniel Chester French. The writer here quotes words of Mr. Bacon setting forth his conception of the Memorial:

"From the beginning of my study I believed that this Memorial of Abraham Lincoln should be composed of four features: A statue of the man, a memorial of his Gettysburg speech, a memorial of his second Inaugural Address, and a symbol of the Union of the United States, which he stated it was his paramount object to save and which he did save. Each feature is related to the others by means of its design and position, and each is so arranged that it becomes an integral part of the whole in order to attain a unity and simplicity in the appearance of the monument."

"The most important object is the statue of Lincoln, in which is exprest as far as possible the gentleness, power and intelligence of the man."

The site of the building is isolated and austere. It is converted from a malarial swamp, at first thought so impracticable that "Uncle Joe" Cannon declared that "the building would shake itself down with loneliness and ague." But—

"A few months ago, when 'Uncle Joe' announced his intention of leaving Congress, the Lincoln Memorial was the one achievement in his fifty years of service in Congress to which he pointed with most pride."

"If ever I come back to Washington," he said, "it won't be to wander up and down through the halls of the House of Representatives. You will find me walking down the Mall toward the Lincoln Memorial, or standing there, looking at the statue of the greatest man in American history."

John Hay is also quoted in judgment upon the site, tho in his case favorable from the first:

"Lincoln, of all Americans next to Washington, deserves this place of honor. Toil must not approach too close to the immortals. His monument should stand alone, remote from the common habitations of men, apart from the business and turmoil of the city—isolated, distinguished and serene. Of all the sites this one, near the Potomac, is most suited to the purpose."

In presenting the Lincoln Memorial to the nation, Chief Justice Taft referred to the fifty-seven years which have "faded the figures of Lincoln's contemporaries," leaving him to stand "grandly alone." Then:

"Here on the banks of the Potomac, the boundary between the two sections whose conflict made the burden, passion and triumph of his life, it is peculiarly appropriate that it should stand. Visible in its distant beauty from the Capitol, whose great dome typifies the Union which he saved, seen in all its grandeur from Arlington, where lie the nation's honored dead who fell in the conflict, Union and Confederate alike. It marks

THE MAJESTIC LINCOLN.

Done by Daniel Chester French for the Memorial at Washington. The human figure at the left sets the scale for this 175-ton statue.

combine to make that for which idealists strive—the unity that is perfection." The sentences are written by Grace Phelps in the *New York Tribune*, where she sketches the grandiose plans that are designed to give Washington one of the most impressive beauty spots in this country:

"The Memorial stands in a great open space on a mound built of a series of terraces, rising to a total height above grade of 122 feet. A colonnade of great Doric columns of white marble surrounds the walls, within which, in the center space, is the colossal statue of Lincoln. Each column, thirty-six in all, represents a State, one for each State existing at the time of Lincoln's death. On the walls above the colonnade, supported at intervals by eagles, are forty-eight memorial festoons, one for each State existing at the present time."

"The setting of the Memorial is magnificent. Behind it flows

the restoration of the brotherly love of the two sections in this memorial of one who is as dear to the hearts of the South as to those of the North.

"Here is a shrine at which all can worship. Here an altar upon which the supreme sacrifice was made in the cause of liberty. Here a sacred religious refuge in which those who love country and love God can find inspiration and repose."

In accepting the gift the President said in part:

"Somehow my emotions incline me to speak simply as a reverent and grateful American rather than one in official responsibility. I am thus inclined because the true measure of Lincoln is in his place to-day in the heart of American citizenship, tho nearly half a century has passed since his colossal service and his martyrdom.

"In every moment of peril, in every hour of discouragement, whenever the clouds gather, there is the image of Lincoln to rivet our hopes and to renew our faith. Whenever there is a glow of triumph over national achievement there comes the reminder that but for Lincoln's heroic and unalterable faith in the Union these triumphs could not have been.

"No great character in all history has been more eulogized, no rugged figure more monumental, no likeness more portrayed. Painters and sculptors portray as they see, and no two see precisely alike. So, too, is there varied emphasis in the portraiture of words, but all are agreed about the rugged greatness and the surpassing tenderness and unfailing wisdom of this master martyr.

"History is concerned with the things accomplished. Biography deals with the methods and the individual attributes which led to accomplishment.

"The supreme chapter in history is not emancipation, tho that achievement would have exalted Lincoln throughout all the ages.

"The simple truth is that Lincoln, recognizing an established order, would have compromised with the slavery that existed, if he could have halted its extension. Hating human slavery as he did, he doubtless believed in its ultimate abolition through the developing conscience of the American people, but he would have been the last man in the Republic to resort to arms to effect its abolition. Emancipation was a means to the great end—maintained union and nationality. Here was the great purpose, here the towering hope, here the supreme faith. He treasured the inheritance handed down by the founding fathers, the ark of the covenant wrought through their heroic sacrifices, and builded in their inspired genius. The Union must be preserved. It was the central thought, the unalterable purpose, the unyielding intent, the foundation of faith. It was worth every sacrifice, justified every cost, steeled the heart to sanction every crimson tide of blood. . . .

"This memorial, matchless tribute that it is, is less for Abraham Lincoln than for those of us to-day, and for those who follow after. His surpassing compensation would have been in living, to have his ten thousand sorrows dissipated in the rejoicings of the succeeding half century. He loved 'his boys' in the army, and would have reveled in the great part they played in more than a half century of the pursuit of peace and concord restored.

"How he would have been exalted by the chorus of the Union after 'the mystic chords' were 'touched by the better angels of our nature'! How it would comfort his great soul to know that the States in the Southland join sincerely in honoring him, and have twice since his day joined, with all the fervor of his own great heart, in defending the flag. How it would soften his anguish to know that the South long since came to realize that a vain assassin robbed it of its most sincere and potent friend when it was prostrate and stricken, when Lincoln's sympathy and understanding would have helped to heal the wound and hide the scars and speed the restoration! How with his love of freedom and justice, this apostle of humanity would have found his sorrows tenfold repaid to see the hundred millions to whom he bequeathed reunion and nationality, giving of their sons and daughters and all their fortunes to halt the armed march of autoeracy and preserve civilization, even as he preserved union! . . .

"To-day American gratitude, love and appreciation, give to Abraham Lincoln this long white temple, a Pantheon for him alone."

ENGLISH TO BE SPOKEN BY THE FRENCH

POLITENESS IS STILL A FRENCH VIRTUE. M. Maurice Donnay, academician and author, came to this country recently to represent, along with his colleague, M. André Chevrillon, France in the American celebrations of the Molière Tercentenary. He declared, just before leaving us, that his countrymen must learn English. His politeness withheld the recommendation that we learn French. It is supplied for

Copyrighted by Underwood and Underwood

VIEW FROM THE TOP OF THE WASHINGTON MONUMENT.

Showing the plan of Potomac Park with the Monument and the Memorial on opposite axes. The buildings on the right will eventually disappear.

him by the *Boston Transcript*, which finds this suggestion easily implicit in what he did say:

"When one sets foot in America," he declared, "he is confounded by the fact that our country has not yet comprehended how indispensable it is to study the English language." His own unfamiliarity with the native tongue of Shakespeare and Lincoln, he continues, resulted in a painful consciousness of inferiority at the public gatherings he attended in the United States. No longer must Frenchmen have any illusions with respect to the universality of the French language, however strong may be their belief in its merits. The French language, he points out, is no longer a 'second' tongue to civilized men the world over, and the undeniable fact that English is the speech of two-thirds of civilization makes it incumbent on all good Frenchmen to acquaint themselves with English. 'We must learn English,' he warns his countrymen. 'It is imperative and a patriotic necessity.'

"However wide may be the difference of opinion with respect to the destiny that awaits the English language, there can surely be no quarrel with M. Donnay on the score of the soundness of his advice. The more English studied in France the better. But the same logic applies as forcefully to the reverse side of the same proposition, altho M. Donnay with perfect propriety omitted to say so in so many words. If cultivated Frenchmen are handicapped in their understanding of Britain and America through ignorance of the common language spoken by the two countries, so also are Englishmen and Americans handicapped in understanding France if they have not a working knowledge of the French tongue. To the Greeks all non-Hellenes were barbarians, and in order to overcome the barrier to common understandings that arise when men speak a Babel of discordant tongues, the world's statesmen long ago agreed that French should be the language of diplomacy. An understanding of one or more foreign languages opens up new avenues of appreciation, whether that language be French, German, Italian, Russian, or any other, and few accomplishments are better calculated to break down national prejudices."

The get-together policy suggested in these opinions of mutual-

ity has an early realization in an innovation of the *Paris Figaro*, described in a letter to the *New York Evening Post*:

"PARIS, May 27.—The first weekly 'American page' in the *Daily Figaro* appeared Thursday morning under the editorship of Robert de Flers of the French Academy. But instead of the page being in English for the benefit of tourists, as first announced, it is in French, and for perhaps the more useful purpose of giving Parisians a better understanding of American foreign policy. De Flers says: 'The historic handshake between Washington and Lafayette does not make up for the dangerous ignorance the two republics have of each other that might suffice to change slight fogs into storm clouds. For too long Frenchmen have regarded all Americans only as well-drest, practical, cautious folks, whereas Americans look upon all Frenchmen as wearing decorations and eating much bread.'

"The leading article in to-day's page is by Morton Fullerton on the equilibrium of the two Powers, starting out with Roosevelt's interpretation of the Monroe Doctrine as applied to Tardieu's references thereto in the Chamber of Deputies last Tuesday. [Europe, sick with war, said Tardieu, had need of the same precautions which young America took when she proclaimed the

is to print something that will provoke mystified discussions promoting large sales. He is, in fact, merely following an old recipe. Carlyle discovered it in his time—unaware tho he must have been of the way in which his own literary executors would follow it. 'If you intend,' he wrote, 'to interest readers—that is to say idle neighbors and fellow creatures in need of gossip—there is nothing like unveiling yourself: witness Jean-Jacques Rousseau and many another poor waste creature, going off in self-conflagration for amusement of the parish.' Needless to remark, the astute writers for the book market to-day have greatly bettered that instruction."

SHALL A BOY JOIN A COLLEGE FRATERNITY?

JOINING A COLLEGE FRATERNITY is a good deal like getting married. So writes a man who holds the post of Dean of Men at the University of Illinois. His comparison has nothing to do with the word "lottery," which so frequently is flippantly associated with marriage. Apparently he

thinks one may predetermine this matter pretty accurately. The humor of the comparison, however, lies in the fact that a fraternity man, like a married man, often comes to find out that he has married the whole family. "A boy who joins a fraternity not only becomes one of the small group of men upon the campus of his Alma Mater, but he at the same time assumes a less close, but nevertheless a binding obligation to the members of the other chapters of the fraternity wherever they may be found." The writer here, Thomas Arkle Clark, does not set a high value on this as a deterrent, tho he admits that the implied sacrifice of individual initiative and direction is deprecated often by parents as well as boys. Compensations, however, obtain, and his views, exprest in the *American Boy*, are supported by "several college presidents, college professors, and public-school superintendents" who are said to have read the article before publication. Opposition to fraternities often proceeds from people who have never been members of any—"men who have judged from an external point of view only and who have been influenced by rumor and gossip and exaggerated newspaper reports of the pranks of college undergraduates." We read:

"At the present time national Greek letter fraternities, of which there are perhaps fifty, are the organized force in college activities. They take the place that was once occupied by the college literary society which taught men to speak, which interested them in the politics of college, and which in general controlled and directed what went on in undergraduate affairs outside of the classroom. But the fraternity does still more than this. There are very few fraternities now which do not have their own houses on every campus. If they do not own these houses, tho many of them do, they are well enough organized to rent a house and to operate it successfully.

"These houses form centers of home life which do much to take the place of the life which the boy has known with his own family before going away to college. I have visited many of these houses in most of the States in the Union and I can testify that, in a majority of cases, they are well run and furnish for the young fellow in college a home that is comfortable, that is not over-luxurious, as is sometimes claimed, and the influences of which are on the whole helpful.

"Should you, if you are invited, join a college fraternity? That depends a good deal upon what you want, and how free you are to pursue what you want. At any rate, you should not be unhappy if you do not join.

"It often costs more to live in a fraternity house than it does outside. The food at the fraternity table is ordinarily better than that the student gets at a boarding-house, and the general living conditions are more comfortable and convenient: one has

Monroe Doctrine. She did not want interference from thousands of miles away which was only disturbing and never effective.] Considerable space is given to the return of Maurice Donnay and André Chevrillon from their recent official mission, and there is also a column entitled 'Here and There,' made up of short news items of what Frenchmen are doing in the United States."

BARING THE SOUL AT £250 PER—Rousseau began it; and the world has long since outdone him. Writing books that deal in self-disclosure has been so much the fashion that the *New York Times* marvels that any one should need to be urged to do it. Yet it has lately run upon the "adv." of a London publisher offering £250 in "advance royalties" for a "Book of Self-Revelation." It may be in the form of diary or the "usual novel"; may be long or short, and "should preferably be anonymous." The one rule it must observe is to be a "fearless expression of truth to life." Upon all which the *Times* thus comments:

"In that name many literary crimes have been committed, and doubtless more will be. One shudders to think of the mass of freak manuscripts that will pour in upon the ingenious publisher. His professions of an earnest desire to give to a waiting world works tracing 'the development of character' will not deceive even the most ignorant clerk in his office. The real intent

Mirrored in the pool the Lincoln Memorial has such beauty that only the famous Indian shrine is suggested as a compeer.

to pay for these. The social life of fraternity men is more active and so requires the expenditure of more money for clothing and social pleasures. Sometimes the living conditions have been made too luxurious for the doing of good work, and at times the social life is excessive and the expenditure of money extravagant; but these conditions do not frequently or generally exist. I do not know any chapter of any fraternity—and I know hundreds of them—which does not contain men, respected by every one in the chapter and in the college, who are earning their living in college through their own efforts; but in general, unless the man concerned has some special talent, this is not so easy to do unaided when in a fraternity as when out of it. . . .

"The man who joins a fraternity loses something of his independence. He must submit to regulations, he must learn to adapt himself to the conditions of home life, and to the idiosyncrasies of a score or more of people. He will often have to yield his desires and his rights, perhaps, to the will of the organization, for those who go into an organization must be willing to do what will bring the greatest good to the greatest number. He must learn to get on with people, to give up, to be unselfish, to do that which will be most helpful and advantageous to his brothers. Many fellows do not like to do this, and sometimes parents do not wish them to learn, so that such men would make poor fraternity men, and they would be unhappy and make their friends unhappy in the making. . . .

"There is a tendency when a man joins a fraternity for him to be satisfied with the friends he meets within its membership, and so to narrow his interests, to restrict his acquaintances, and to undervalue the broader training which comes from a more general contact with men. It is only the weak and narrow-minded man, however, who will fall into this snobbishness and who will restrict his acquaintances and his friends to the men whom he meets within his fraternity."

The man confronting himself with the question of joining or not joining—always assuming that he is sought for membership by some fraternity—will find helpful suggestions in Mr. Clark's article:

"The ideals of life formally set before the fraternity man, and these as I have said are practically always based upon Christian principles, are the highest possible. The character of the men who were responsible for the founding of these organizations and the character of the national officers who are now in charge of fraternity affairs in each organization will substantiate this.

"It is true that young men enter a fraternity at an age when they are thoughtless and selfish, an age when they are the least eager of any time in their adult lives to take responsibility. It should not be thought strange, therefore, that they do not always take the ideals of the organization with which they are connected as seriously as an older man would do, nor should their occasional failure to do so be laid to the weakness of the organization. It is rather unjust that we more often judge an organization by its weakest member rather than by its strongest, or by the average man who makes up the body of the group. It is not true that the man who joins a fraternity subjects himself to greater moral danger than the man who remains out. The moral standards of a fraternity are not lower than the moral standards of the general community in which it exists. If they seem so, it is because the irregularities of the group are more

commented on than are those of the individual. It is enough to say that the man who joins a fraternity gets with a group of men which on the whole represents what is best in the life of the college of which he is a member.

"The college man, ambitious for success in extra-curriculum activities, stands a better chance of getting on in these if he belongs to a fraternity than if he does not do so, and this is not because the fraternity unduly or irregularly dominates undergraduate affairs, but because the man has behind him an organization to direct and advise and encourage him. Competition in undergraduate affairs, in a big institution at least, is strong and persistent, and the unorganized man, unless he has unusual self-reliance, is likely to lose heart, to take his first defeats hard, and soon to drop out of the contest. The fraternity man is not allowed to do so. He is pushed and goaded by the organization behind him to keep on, and therefore, he more frequently wins. Every business man recognizes the value of organization."

Caution is needed to insure against lasting regrets:

"No boy ought to join a fraternity simply because he is asked or because his friends are doing so, any more than he should marry for the same reasons. He should not be deprest if he is never asked. If he joins, it should be after some deliberation; tho as fraternity business is now run there is frequently too little chance for prolonged consideration of an invitation; but even the 'get-rich-quick' organization will, if a man insists, give him a few days to think the thing over. He should take this time even if he has made up his mind to accept. Go slowly when you are considering fraternity membership. Don't spend your money on a gold brick. . . .

"Not all fraternities are alike, and a fraternity that has an excellent national reputation may have a very weak chapter at the institution which you attend. The details which are given a freshman about the organization he is asked to join are very often prejudiced details. Before accepting an invitation to join any fraternity, a man ought to learn something of its history, its local standing, the cost of membership, the activities, the scholarship, and the moral and social characteristics of its active members and especially of its upper classmen, for the character of the upper classmen determines largely the character of the chapter. He ought to ask his questions whenever possible of an unprejudiced person, and the safest man of whom to inquire is ordinarily the Dean of Men, who, if he is the right sort, will tell you frankly.

"No boy ought to be so foolish as to pledge himself while he is in high school. Many colleges forbid it, and most thoughtful fraternity men are opposed to it. The boy who does it is not giving himself a fair chance. If he is good enough to be bid before he comes to college, he will not be less so afterwards. If he waits until he gets to college, he has a chance to make comparisons and to choose more wisely.

"When a man joins a fraternity, he is choosing the friends with whom he will spend the most intimate hours of his college life, and possibly of his life after he leaves college. He should study himself and them pretty carefully and unemotionally before making a final choice. If they are not his type of men, if he would not care to be like them, if they do not hold to the ideals which to him seem vital, if he would hesitate to take them into his home and introduce them to his father and mother and sister and his friends, then he had better refuse their invitation. He will be happier and better in joining no organization than in joining one to which he can not give his allegiance heart and soul."

RELIGION-AND-SOCIAL-SERVICE

WAYWARD GIRLS NOT MADE ANGELIC BY TORTURE

POETRY IN STRING-BEANS SAVED EVE, who had spent seven years in a State institution for the feeble-minded, part of the time in a strait-jacket, from going into another tantrum. A wise matron took her into the cellar where stood hundreds of rows of monotonous looking canned beans, and sketched what could be done to make them look prettier and more appetizing. Eve's imagination was quickened; she went to the job with alacrity. Under her direction glass jars replaced the cans, strips of red peppers alternated with the

The yeast of change is said to be working in all directions. Magdalen Houses, built so as to shut in the sinners and shut out the world, are going out of fashion as places of reform. Experience has shown that behind the stone walls of some of these institutions, conceived in piety and nurtured in charity tho they were, "the interaction of shut-in personalities brought riots, scandals, repressions, cruelty, reigns of petty tyrants, brief but bloody battles and perversions." Now, we are told, it is noteworthy that the simple institutions are for the most part

doing the best work. Samareand Manor, North Carolina, was once an experimental private school for boys whose atmosphere blends with the spirit of wholesome recreation, while Bon Air, Virginia; Clinton Farms, New Jersey; Sleighton Farms, Pennsylvania; and the State Reformatories of Connecticut and Kansas have built themselves around old farmhouses and retained their heritage of sturdy American living. Much depends on the superintendent, since—

"She deals with broken material. Home, school, church, industry, social agencies, police, the court, the community in general have failed where she is expected to succeed. Each has left a signature of failure on the young person who must be remade. To many a girl the institution is an introduction for the first time in her life to consideration and courtesy. In some communities the only thing specially designed and organized

REFORMATION WITHOUT THE USE OF STRAIT-JACKET OR FIRE-HOSE.

"No one who has not seen it can believe how complete is the miracle wrought by freeing the energies of the girl-delinquent into channels of creative work," says one who has observed the change.

jade and ivory of the vegetables. She convalesced mentally and morally, and now she is in a city telegraph office in charge of an important division. Dousing from a fire-hose, or confinement on bread and water—still practised in some institutions as a means of making wayward girls fall in love with life as it should be—would not have helped Eve, or any other girl. Within the past decade a great change has come over correctional institutions in this country, says Miriam van Waters, referee in the Los Angeles Juvenile Court, who, after a survey of twenty-four State training-schools for girls and young women, six reformatories and eight private institutions, writes in *The Survey* (New York) that "no one who has not seen it can believe how complete is the miracle wrought by freeing the energies of the girl-delinquent into the channels of creative work." She gives another instance: Helen, aged fifteen, who had run away from three institutions, had bobbed her hair, wore boy's clothes, smoked, drank, and beat her way on freight trains, was allowed to let her fancy run free in making original dolls instead of being put into a strait-jacket to make her good. She "found" herself, and the dolls soon had commercial value. Later, when put in charge of a kitchen department, her only gesture of independence was to hang a sign: "No Slang Here, by Heck." It was not molested.

for the welfare of the delinquent girl is her commitment to the training-school.

"The superintendent's problem often demands that she be an expert business administrator, capable of handling hundreds of thousands of dollars. She must be something of a farmer, builder, architect, mother, teacher, housekeeper, stock-breeder, engineer, landscape gardener, psychologist, psychiatrist and domestic economist. Above all, her temperament must be even, balanced, creative. She must be a 'specialist in the difficult art of human relations.' Every type of human problem is presented in the State institution. Even if the superintendent has a staff of experts, she must understand how to make them all sing in tune."

Another essential to good work is diagnosis of each case, by which is meant, says the writer, "intensive, comparative study of the physical, mental, social and environmental assets and liabilities of the individuals committed to the care of the State." The only analogy to the reception methods used by most of our correctional institutions, she says, "would be a chemical laboratory that received a shipment of bottles approximately the same size and shape, unlabeled, and containing glycerin, dynamite and distilled water." The method used by the El Retiro school for girls in California is observation by physician, psychologist, referee of the court, probation officer, superintendent, principal of the school, field worker and recreation director. The results

are pooled, a program of treatment for the girl is then made, and the probable outlook stated. A second conference of the experts receives the results of observation by a representative of the inmates, and a definite project is then reached. Fixation of routine, which characterized the old institutions where floor-washing was the chief thing taught, is recognized by modern superintendents as an evil. The program of one old-fashioned school which came under the writer's scrutiny begins at 5:30 when 300 girls start scrubbing, or report to laundry, dairy and bakery.

"At 6:30 breakfast is eaten in silence, while a matron stands on watch. At 7:00 some classes of instruction start, the teachers being matrons who have been on duty the night before. Work hours go on from 8:00 to 12:00 and 1 to 5:00 P.M. with no recess except dinner. There is no talking among the girls. After supper the girls are locked in their rooms. Occasionally there is an evening entertainment. Three times a year details are changed; that is to say a girl who has been working in the kitchen now goes to the laundry or sewing room. Chapel services and an occasional riot are the only breaks in the monotony.

"In the majority of schools and reformatories the program is a wholesome interchange of work, study, play and expression. In the best schools the daily life is a model for young people anywhere. The daily shower-bath; wholesome, joyous exercise; assignment to brief, useful tasks, performed under ideal conditions of light, sanitation and skilled supervision; the stimulating small class groups for study; merry conversations at meal-time, with good food, well cooked and beautifully served; hours of spontaneous free play, hours of restful sleep, frequent change in program, stimulating surprises, plenty of noise, books, pictures, music, pets and company—all these aids to life are provided in our best correctional schools.

"A minimum of scrubbing and a maximum of schooling,' is the theory I go on, said one superintendent. I had heard of her before I reached her institution from a superintendent who disapproved: 'She is trying to let these girls be natural and normal, and give them a high-school education. You can't treat them that way.' However, she was wrong; the trend is all in favor of 'treating them that way.'"

Adjustment to community life is also an essential, since it should be the aim of the correctional institution to fit the girl to play a part in community life. This is attained in many ways: by the use of some system of money (toy or real), by shopping in the regular stores; by use of the community library and art galleries; by sending the girls out to the public schools; by community pageants and athletic competitive events; by singing, by community church attendance; by becoming part of national movements, such as the Junior Red Cross, better babies movement, Girl Scouts, Camp Fire Girls; by the publication of newspapers, and in numerous other ways.

In the matter of discipline a change for the better is also under way, tho "flogging is still practised in nearly half the institutions studied. Solitary confinement in black cells is still used. Other punishments are cold-water baths, doses of drugs that produce nausea, drenching the body with a stream from a fire-hose, tying up, and other forms of physical restraint. Shaving the heads, suspension from school, deprivation of medical attention, and nameless and terrible punishments are still found, survivals of the spirit of retaliation, fear and stupidity." In contrast, this is what happens to the runaway from the Colorado State School who is caught and brought before the superintendent: "Tired out? Well, sit by the fire and warm yourself; then go back and finish stitching that apron." The outlook, then, is stimulating, and says the writer: "Contrary to the impression of most people we find within State correctional institutions more knowledge of the delinquent girl, more sympathy, more of that greatness which reveals itself in the interpretation of human life, better theory and better practise in the problem of delinquency than we find outside in the general community."

COAL-MINING AND CHRISTIANITY

THE PRINCIPLES OF CHRIST have been, and are being, violated in the coal industry, with the result that "it is disorganized, wasteful of human life and economic good, and is endangering the peace of the community." Such is the conclusion of the Social Service Commission of the Federal Council of the Churches of Christ in America, which recently issued a pastoral letter on the subject and called attention to an attempt already made to settle the controversy. The letter, as it appears in the *Federal Council Bulletin*, states that while the

WOODEN STOCKS ONCE USED FOR GIRLS.

The old method of reforming the delinquent was to bend her will by breaking her body with cruel and unusual punishments.

miners agreed to the recent appeal by the Commission and the National Catholic Welfare Council for a joint meeting of miners and operators to settle their differences, the conference failed because certain operators refused to conform to the procedure previously agreed upon. Now the two great church bodies have asked the Government to make an exhaustive and scientific study of the coal industry so that the public may have information on which to base intelligent judgment, and because a knowledge of facts is necessary before a reorganization that will remove the greater evils of the industry can be attempted. In going before the country with its appeal, the Commission declares:

"The present conflict in the coal industry, with its deplorable effect upon human lives and human relationships, is of vital concern to the Christian churches of America. The churches are teachers of brotherhood, which the struggle is destroying in those concerned faster than the churches can build it up. They have a strong sense of responsibility for the well-being of the more than two million men, women and children whose livelihood depends directly or indirectly upon the industry, and is now jeopardized. The churches are involved inevitably in the confusion and partizan bitterness which is dividing hundreds of mining communities. They have a vast stake in whatever makes for strength or weakness, and for solidarity or class divisions, in the nation.

"The principles upon which the church acts in a time like this are set forth in the Social Ideals of the Churches, to which we are committed. They should be read afresh, with a view to their application to the present conflict. They rest upon the teachings of Christ, and they may be summarized as follows:

"The sacredness of the individual human life, and the supreme importance of its opportunity for self-expression, happiness and development;

"The spirit of brotherhood, which expresses itself in good-will, fair dealing, and cooperation;

"The motive of service, which should be the supreme motive

of industry, subordinating the motives of pecuniary gain and personal ambition."

Notwithstanding that the coal industry is "one of great hazard to life, and of minimum security in respect to employment and income," the vital principles of Christian conduct are being constantly disregarded, we are told, and the achievements of former years in furthering wholesome human relations have been in large measure lost in the bituminous branch of the industry by the "sudden abandonment of the machinery of conference and agreement." Yet "it is manifest that the right of the mine-workers to collective action is fundamental, not only as a matter of justice to them, but as essential to peace in the industry." Another indictment is that the coal industry "has been especially subject to exploitation and speculation; and as a result it has failed not only to provide steady employment, but also, in recent years, to supply the nation with coal at reasonable cost." In view of this situation, then, the Commission holds that—

"The appeal for conference and the proposal for an investigation are as pertinent now as at any time before the strike was called. The operators and miners must eventually come together to settle their differences, and it is better that they should do so voluntarily, and before the bitterness deepens or the conflict becomes more acute. The need of a study of the industry is apparent, both to supply a minimum of essential facts for the settlement of the present controversy and to furnish the more exhaustive body of information which will be needed for the larger and more difficult task of correcting the evils of the industry.

"These matters should have emphasis and insistent teaching by pastors and the religious press. They must urge that Christian principles be taken seriously. They must speak the truth courageously but without partizanship or bitterness, for the pastor is the shepherd of all."

MOVIE COMPETITION WITH THE SCHOOL

NINE TIMES A WEEK in the movies would seem more than enough to satisfy the most inordinate desire for entertainment, but that is the record of a Chicago youngster, who rounded out the week by attending Saturday and Sunday matinees. Of 3,000 Chicago children who answered a questionnaire submitted by Mrs. E. L. Moulton, of the Parent-Teacher Association, 87 per cent., we are told, said they attended from one to seven or more shows every week. With several hundred, attendance at the movies had become a fixt habit. Indeed, it is said, Friday, Saturday and Sunday now mean attendance at the movie as definitely as Sunday used to mean attendance at Sunday-school. The question, "What kind of pictures do you prefer?" brought out, says *Social Welfare* (Toronto) a wealth of material which reformers and statisticians may well ponder:

"The pictures I like best are those which scare you.' 'Good sensible pictures where people are very poor and grow rich.' 'Guns and police wagons, because people are all sad and excited.' 'Travels with Burton Holmes.' 'Mystery, but not too deep.' 'Lots of fighting when men are brave and fight for a girl.' 'Good books like Pollyanna.' 'How things are made, pictures of fisheries, etc., and good Western scenery.' 'Educational pictures, like 'The Lincoln Highwayman.' " are types of the answers received."

School work suffers, as might be expected, from the movie mania, as

"The data compiled in the representative districts of the city showed that the 275 best pupils used 393 tickets in one week, whereas 275 poorest pupils used 503 tickets weekly. Another item of interest brought to light by the questionnaire is that the children in the poor tenement districts attend the movies as frequently as the children in the best residential sections.

"According to the data received, boys and girls in the six schools covered by the questionnaire spent \$920 a week on the movies, making the total for the year reach the astonishing figure of \$46,000."

AMERICA'S VICTORIOUS CRUSADE

THE GREATEST CRUSADE of modern times comes to an end this month when the American Red Cross closes its accounts in Europe after having spent \$400,000,000 in furnishing food, clothing and medical supplies to the war-affected countries. And wherever in future years the story of the World War is told, says the *New York Times*, "that of this crusade will be woven into it and will be gratefully remembered with it. It was the head of the Moslem community at the very end of the 'far-flung battle-line' who, witnessing the work of the American Red Cross, wrote, in the language of his fatalistic doctrine, that America had been created in order that 'out of compassion and charity' it might 'do some good to humanity.'" In this tribute Jew and Gentile, Catholic and Protestant have joined.

In announcing that there is no longer any need for American relief effort in Europe, Dr. Ross Hill, director of foreign operations, said that the American people "may feel proud of their achievements in restoring the health and morale of the distressed populations of Europe. Their aid has left an enduring impression and millions of grateful hearts. While here and there individual groups may need assistance, the typical work of the American relief organizations now can be ended with credit to themselves." Every country in which the American Red Cross has worked requested of the organization that a certain personnel be permitted to remain temporarily in advisory capacities in order to make more certain the continuance of Red Cross work by the governments themselves. This request, it is announced, will be complied with. The Junior Red Cross will continue in certain countries, and will receive the cooperation of the League of Red Cross Societies.

Whether the stricken peoples of Europe are grateful for American assistance is of minor importance, says the *Providence Bulletin*. What matters is that "Americans have the satisfaction of knowing that it will be recorded in history that one nation, unfettered by alliances or oppressive treaties, played the part of a true brother to the starving peoples of Europe and played it well. By her relief work overseas, America has pointed the way to better relations between the peoples of the world." In return for this, says the *Washington Herald*:

"She asks only that those she has aided go and do likewise when the opportunity is presented them. She has shown no favoritism among the races of men. The Frenchman and the German, the Austrian and the Serbian have been aided alike. What has been given would be repaid with abundant interest if these peoples would recognize that all mankind are brothers under the skin, that hatred brings no profits, and that the Divine purpose with humanity demands cooperation of all.

"American Christianity never has been a religion of empty words. It has been a religion of crusts, not stones; of good Samaritans and not of men who vaunted their virtues in the temple. Europe, we believe, has come to realize this. There are signs which indicate that a more humane spirit is abroad in the land than was visible immediately after the war. The Genoa Conference, apparently, has failed. But it will not be a failure which closes all doors. The vision of an eventual United States of Europe still lingers, flickering and far away, but visible."

TO RESTORE A FAMOUS SHRINE—Pending its rebuilding, a temporary wooden chapel is to replace the famous shrine of St. Anne de Beaupre, Quebec, Canada, recently destroyed by fire; and pilgrimages, it is announced, will be continued. An illustration of the difficulties of accurate reporting appears in the fact that, according to later information, the fire did not originate in the pile of crutches left by the healed, but in the vestry, and the priests, instead of marching in procession and praying against the flames, as first reported, used all modern methods to extinguish them and to save as much as they could of the church furniture and treasures.

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

“—and they’re digestible too!”

That’s a remark you often hear people make about Campbell’s Beans. It is one of the main reasons why so many always insist on getting Campbell’s. The secret of their wholesomeness lies in the fact that they are slow-cooked. You can freely indulge in their rich flavor and tasty tomato sauce because you know they always agree with you.

12 cents a can

Except in Rocky Mountain States and in Canada

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

THE dwindling ranks of our oldest war heroes are reformed once a year at least, and thus we are imprest by what happened time out of mind for most of us. W. P. F. Ferguson of the Franklin (Pa.) *News-Herald* is the writer of this:

THE LITTLE COPPER BUTTON

By W. P. F. F.

He is bowed and old to-day
And goes limping down the way,
With the little copper button on his breast:
And few notice as he goes,
And few think, of even those,
Of the days when he went marching with the best.

But that little copper thing,
If you pause, will memories bring
Of what's proudly writ upon a fadeless page,
How his valor and his truth,
In his far-off days of youth
Wrought the mighty deeds that glorified the age.

'Tisn't just an old man there,
Bended form and whitened hair,
Slowly plodding now the careless street adown:
'Tis a vision of a Past
That shall deathless ever last
In majestic, blazing glory of renown.

Look with patriotic eyes—
There the shot-torn banner flies:
There the long array of bayonets stands fast:
There the flashing sabers shine;
There the black guns swing in line,
And earth trembles with the shock of cannon blast.

There the battle colors proud
Stream above the rolling cloud,
Where the iron hearts drive in the iron ships:
And the thunder of the guns
Seaward rolls and inland runs,
Mingled with the cheers that roar from loyal lips.

There the wounded and the dead
Lie on battle's gory bed:
There they sink beneath the crimsoned, salted wave;
There in noisome prison-pen,
That may live the rights of men,
Heroes starve and die to sleep in nameless grave.

There, full triumph in review,
Come the victors, faithful, true,
While the Nation hails its new salvation won:
And the glory that they share
Through all years to come they wear,
While the Stars and Stripes shall greet the shining sun.

This and more than this I see,
As his bent form passes me,
With the little copper button on his breast,
And at quick salute I stand,
Lifted soul as lifted hand.
As I hail the Nation's heroes, Freedom-blest.

The Measure (June, New York) seems to be shrinking and ought to beware inviting an epithet such as "Small Measure"! But maybe its June number is a confirmation of the subsiding wave in American verse, which has been noted in various places. Harold Vinal edits a poetry magazine in Boston, named *Voices*, and contributes one of the best things to this:

FLIGHT

By HAROLD VINAL

Who shall know the way
That her feet took
By a sapless tree,
By a dried brook?

None woke to hear,
She left no door ajar;
Down the road of night
She went like a star.

She left no door ajar;
On her, light as air,
She felt a deadman's hand
Tremble on her hair.

In the hush of dawn,
Down a trail lost,
She reached a river
That she never crossed.

The Outlook (New York) evokes the ghost of a city street, and convinces us that even the meanest of streets must be so only because of the use that man has put them to. But at least he has no power to lay their ghosts:

A CITY STREET

By HARRY LEE

I
That there were trees
In Orchard Street,
Song birds upon the bough,
Blue violets among the grass,
Seems past believing now.

II
But even so in Orchard Street
They know that May has come—
By window-sill and crowded stoop
Bee-like, the voices hum.

III
A flower wagon trundles by,
A hurdy-gurdy plays,
And beauty comes to spirits there
In many mystic ways.

IV
For there are dreams in Orchard Street
And cooling winds and rain—
And love and pity and the peace
That follows after pain.

V
And fluttering hosts of children there,
Fragile and pale and sweet—
Ah, beauty finds a fadeless May
In barren Orchard Street!

ONE may perhaps apply without the writer's explicit directions these lines in the *New Republic* to the Genoa business and thus derive what courage there may be from thinking of it afterward:

CHORUS

By GEORGE BRANDON SAUL

They will pass and subside—these dusts of the spirit and mind,
These dusts that are white like flame from the pits of the moon:
They will end in a murmur of wind, in a hushing of cries,
Very soon, very soon.

They will pass and subside, and there will be quiet and peace,
Though of such as may sit among ruins and weep in the dawn
Alone by the wash of dead seas, in the silence of rains
And the dream of what's gone.

Very soon, very soon—in an hour, or the thought of an hour,
They will pass and subside, and the challenge they cried to the years
Be one with the memory that follows rebellion and light
And the ache of old tears.

HOWEVER often this story is retold it gains a new poignancy when told as the writer here does in *Harper's*. It is the summation of numberless novels:

MY GIFTS

By HELEN FRAZEE-BOWER

Long years I wrought upon my little gifts;
Then came and knocked at your half-open door—
Timid and tremulous. You smiled at me
And bade me enter—I could ask no more.

Kneeling beside you, I unwrapped my gifts—
Unfolding each that you might look and see:
Sweet Innocence, and Faith, and Hope, and Trust,
And Loyalty to Truth, and Modesty.

And over all, and compassing the rest,
A Love as high and holy as the stars:
Builded of Youth's divinest dreams,
The Great One Dream—all these were yours.

You took each gift up in your smooth white hands,
And fingered it a moment—as a child
Might play with some new toy—then, growing tired,

You tossed each in the corner there—and smiled.
Oh! you were kind—you called me goodly names,
You looked into my eyes and bade me stay;
But I, who builded all upon my dreams,
Must take my little gifts and go away.

I shall not seek another altar shrine
On which to lay the gifts I made for you:
I could not give them now to some one else—
My childish dreams that never will come true.

But there's a quiet place out in the woods,
Where all night long the sad winds come and play;
There I shall go and dig a little grave
Beneath the trees—and lay my gifts away.

The kindly leaves will whisper over me,
The lonely stars will watch me from above;
And I shall come away again, content
To pity you—O you, who cannot *love*.

The Saturday Review (London) has a political version of one of our favorite stories. It concerns an old salt who sailed into the misty Straits of Dover from the blue Mediterranean and remarked to himself: "Well, this is weather as is weather, none of your blasted blue skies for me!"

THE RAMSHACKLE SAILOR

By WILFRID THORLEY

O ramshackle sailor, now why do they glisten,
Those eyes that are salt with the tide they unlock?
"They've sighted the land, and the flag's at the mizzen;
On shore, O now listen
The clime of a clock
And waters that glisten and shake to the shock!"

O ramshackle sailor, now why do they twinkle,
Those eyes once again at the sight of old Thames?
"It's happy I am for to hear the bells tinkle,
And see the lamps sprinkle
Their little gold gems
That tumble and twinkle in old Father Thames."

O ramshackle sailor, now why are they twirling,
Those feet that move light as though treading on air?
"O somewhere on land I can hear the loud skirling
Of pipes to the swirling
Of roundabouts there,
Where lasses go whirling and naphtha's a-flare."

O ramshackle sailor, now where are you going
Along the dry causey and all of a grin?
"Who rides on the horses I'd like to be knowing,
And how the wind's blowing
Inside of the inn,
And if a lad's bowing the old violin."

This house won the recent competition held under the auspices of The House Beautiful magazine. It was selected by a jury of architects from sixty-five drawings of unusual merit.

Only \$15 more with an Asbestos Roof

THE extra cost of Johns-Manville Flexstone Asbestos Shingles (slate-surfaced) on such a house as this is but \$15 more than ordinary composition shingles. Think what this means.

It means that for this slight extra cost your new house is protected with asbestos rock fibre.

It means that you need never fear the danger of wind-blown sparks, because Flexstone Shingles have the same asbestos fire-safety that the law requires in theatre curtains. That is why they are given the highest rating in their class by Underwriters' Laboratories, Inc.

Since the foundation of Flexstone Shingles is rock fibre, they must necessarily be longer lasting. They will not curl, rot, dry out or warp. They

never need painting or refinishing.

And they are beautiful too, surfaced with crushed slate in soft tones of green or red, whichever you prefer. But with Flexstone Shingles this crushed slate surfacing is not the protective element, as with other composition shingles. It is primarily embellishment. The *real* protection is the Asbestos rock fibre underneath.

Remember, too, that there is a roofing of Johns-Manville Asbestos for your building whatever its type. See chart on right.

Have your local dealer, roofer or carpenter give you prices and show you samples.

these affect young people. The causes are the lack of an adequate sense of responsibility in the parents or guardians of girls, a decline in personal religion, a failure to realize the serious ethical consequences of immodesty in girls' dress, a dulling of moral susceptibilities, an inability to grasp the significance of the higher things in human life, and, last, but not least, the absence of sufficient courage and determination to resist the dictates of what is known as Fashion when these are opposed to decency."

"There is such a thing as Bolshevism in the moral and spiritual spheres," declares George W. Sandt, D.D., editor of the *Lutheran*; and, in his opinion:

"We are suffering from its effects at the present time. A spirit of libertinism is abroad among our youth. There is little or no respect for parents and superiors in many of our homes and schools and churches. There is an ominous absence of reverence for things sacred, of noble ambition and earnest moral purpose, and a bold and brazen defiance of decency and modesty in dress and speech and conduct. Women paint and powder and drink and smoke, and become an easy prey to a certain class of well-groomed and well-fed high-livers, whose chief business is 'to pluck the blush of innocence from off the cheek of maidenhood and put a blister there.' Pleasure—madness and love of luxury have become epidemic, and the vast multitude seem to have banished all noble idealism and usefulness, and refuse to take life seriously, save under compulsion of some misfortune. Any one whose optimism can make him blind to all this and much more is welcome to it. I do not have that kind of optimism, and have little respect for certain preachers who apologize for the sins of the age when they are called of God to condemn them."

R. E. Hough, editor of *The Mississippi Visitor* (Presbyterian), takes an equally pessimistic view. He writes that—

"There has been a very decided break in the moral levee, and it now looks as if the waves of immorality and indecency of a little while ago have become such a torrent the public has about decided there is no use attempting to repair the breach, and get back to the old channel of pre-war standards of living and conduct. The only change, therefore, that I can see is that which has occurred in the public attitude rather than a return to higher ideals and behavior. The general public has become more tolerant. Much that shocked the finer sensibilities a few months ago are now regarded as quite the thing to do. And this is why much less is being said about conditions."

W. P. Throgmorton, editor of *The Illinois Baptist*, sees a revolution going on in both morals and manners. Morals, he says, are looser than formerly. "In my opinion," says O. V. Woosley, field secretary of the Western North Carolina Conference Sunday School Board, "conditions relative to behavior of young people are worse than formerly. More boys and young men are smoking cigarets with prevailing results. More girls and young women are giving themselves to the frivolous rather than substantial modes of behavior. I am inclined to think that youthful morals are being broken down." H. C. Wayman

and A. T. Robertson, editors of *The Review and Expositor* (Southern Baptist), also find evidences of moral degeneration. They write:

"There is a great deal of frank talk among them that in many cases smacks of boldness. One hears it said that the girls are actually tempting the boys more than the boys do the girls, by their dress and their conversation. Not all the boys and girls are bad, but evil is more open and defiant of public opinion and restraint than was once the case. The situation causes grave concern on the part of all who have the ideals of purity and home life and the stability of our American civilization."

James M. Gray, editor of the *Moody Bible Institute Monthly*, declares that in both morals and manners society "is undergoing not a revolution, but a devolution. That is to say, I am not so impressed by its suddenness or totalness as by its steady, uninterrupted degeneration." Taking a very similar view, a bishop of the Episcopal Church observes:

"As one reads history, it would appear that the younger generation always seems to be in peril in the estimation of the generation just passing off the stage. It is one of the characteristics of the older people to glorify the manners, customs and habits of the time when they were young."

"But it does seem as if at this period, because of extraordinary happenings, there is a letting down of convention, a change of angle, an alteration of standards—all this seems to us older people to be unfortunate, and to presage disaster. But let us remember that we older people have 'made a mess of it,' and recent history reflects no credit on those who might now be expected to be pioneers of everything that is noble and fine in human life. The young people come on the stage keen, observant, full of life and activity, without much respect for the generation which has brought things into such a sad condition. They propose to have their own way, go their own gait, and make things different."

"But the history of Republics in the past does not give much comfort, for they have

always gone in cycles of 1. *Enthusiasm*; 2. *Prosperity*; 3. *Corruption*; and 4. *Dissolution*. Are there not signs, not a few in this Republic, that it is well on its way toward the crisis of that cycle?"

To all this it is easy to reply that the editors of religious newspapers are outside the world they condemn so harshly. But condemnation as harsh, if not harsher, comes from within that very world. Certainly the editors of college newspapers and magazines know whereof they speak, and the following excerpts from replies to our questionnaire may be considered representative. Thus the editor of a college magazine in one of the country's largest, most representative women's colleges, Alice F. Parker, editor of *The Smith College Monthly*, finds that:

"The wild young people, whose wild young ways furnished last year's moralists with a new and refreshing fad, are just the same sort of specimens that they were when first brought to light. They continue to dance and drink, and smoke and pet

THE "FLAPPER," LONDON MODEL

This British view of a phenomenon common in America is taken from *Eve*, one of the most widely circulated of the English magazines for women. "Adam" is represented as saying, in 1920, "Good gracious, Eve! You aren't really going out in that apology for a dress?" Eve replies: "Sure thing, old top. One must be in the fashion, or die." However in 1922, when Adam remarks: "I see Paris says skirts are longer and longer, oughtn't you to—" Eve gravely assures him: "Not for this child. It's the fashion not to care a hang for fashion"

Four rolls and the right player-piano—the Gulbransen!

"You'll be delighted with your Gulbransen, Mrs. Brown—that I know.

"Another thing I know: You will want to play it correctly, artistically.

"Study these four Instruction Rolls a few evenings, Mrs. Brown; they will do for you what practice exercises and a good teacher do for the pianist.

"Except that they are *simple*; not at all difficult, monotonous, tedious—like finger exercises.

"Far from it! They're just as much fun as learning the latest dance step or driving a new car.

"Your friends, hearing you play, will pronounce the Gulbransen a fine instrument—will say it is different from other player-pianos—and it is!"

* * * * *

Our interest, and the dealer's interest, go beyond the mere making of a sale.

Having produced a player-piano that *can* be played well, we go a step farther and make it easy for anyone to *do* it—quickly and surely.

Instruction Rolls are exclusive with the Gulbransen; supplied without extra cost with the White House, Country Seat and Suburban Models.

Try the Gulbransen at our dealer's; we will gladly send you his name and address.

FIGHTING BEHIND THE MISSISSIPPI LEVEES

TRENCH FIGHTING, or perhaps the defense of some fortress, resembles the battle that is carried on along the Mississippi when the rising water washes the top layer of the emergency sand bags. Will the enemy break through? Will the fortification hold? Everybody thinks, and everybody

send the waters of the Mississippi down Deer Creek, which runs for scores of miles through one of the richest parts of the lower Delta. Many hundreds of thousands of acres of highly cultivated plantations would be overflowed; cities and towns would be threatened with disaster; human life would almost surely be lost. Meetings were held in many of the communities along

the creek. Organizations were perfected for the purpose of sending labor to strengthen the impaired defenses. Many planters offered to send the last man they had. They argued that if the levee broke no amount of labor would be worth anything to them.

At first the negroes were every morning transported in cars and trucks, returning at night. Later special trains were run; camps were laid out; and at times as many as five thousand men put upon the first, which is also the last, line of defense. Wherever darkies are found loafing about a Deer Creek town they are given their choice of going to work on the levee or being arrested for vagrancy. They usually choose the levee work, tho to those who live several miles away from the rising river the thought of fighting it is terrifying. After a few hours of association with the seemingly harmless body of water, however, they seem contented enough. Two professional gamblers the other day paid fines of \$100 each and accepted sentences of eight months on the county farm rather than risk their necks or their superior social standing as members of a promiscuous levee gang.

Fighting the Mississippi is not particularly hazardous for those who are on the battle-front. Most of the danger is for those who live away from the levees. Whenever a break occurs, everybody within reach of them runs toward these protecting dykes.

talks, in terms of the one great "If." "If" the levee holds, the school-girl will have her graduating dress. The ball-team will play a neighboring ball-team next Saturday—"If." The housewife debates with her family and neighbors the grave question of the wisdom of setting out tomato plants—and the potency of the "If" has to be considered there. The planter tries to show his contempt of that "If" by tossing a coin to see whether all hands go fishing or plant a hundred acres of corn. This is largely whistling in the dark to keep up waning courage, says Frederick W. Jones, writing in *The Outlook*, for he notices that—

One of these planters has this standing order with the merchant he and I deal with: Such and such a number of bushels of corn and such and such a number of tons of hay "if the levee breaks." Every family in the country has equipped itself with at least one boat and has planned what to do with the stock. In the meantime the churches and the Sunday-schools are filling up. Like Noah in the days of the approaching flood, everybody is trying to "walk with God." One preacher in my town has cleverly expressed it all on a signboard: "If the levee of life breaks, have you a lifeboat for eternity?"

Fortunately for the peace of mind of the planters in this section, there has been an abundance of fighting on hand. At the first approach of the besieging enemy a weak sector on the battle-front was found. For a distance of six or seven miles in the region of Miller's Point, about twenty miles north of the rich and beautiful city of Greenville, the levee was regarded by the engineers as insecure. A break there would

WHERE THE LEVEE GAVE AWAY.

A burrowing woodchuck or muskrat may have been responsible for the small leak which resulted in the sweeping away of this 200-foot section of the Mississippi embankment near Burlington, Iowa. The water did damage estimated at \$1,000,000.

Photo courtesy of "The Outlook."

A LEVEE IN IMMINENT DANGER OF BEING BREACHED.

The face of the embankment is sloughing into the river, and carrying the breakwater fence with it. The water is about 25 feet higher than the farms at the left, glimpses of which may be seen just over the line of men who are working to save the levee and their homes.

The struggle between man and the river is grim, says Mr. Jones, but it fascinates. There is a stealthy quality about the water. It gains slowly, or breaks free suddenly where a break is least expected. In time of rising water:

Guards patrol the levees day and night. They are ordered to

Only one-fifth of the buildings owned by the Bell System are shown in this picture.

A Telephone City

Above is an imaginary city, made by grouping together *one-fifth* of the buildings owned by the Bell System, and used in telephone service. Picture to yourself a city *five times* as great and you will have an idea of the amount of real estate owned by the Bell System throughout the country.

If all these buildings were grouped together, they would make a business community with 400 more buildings than the total number of office buildings in New York City, as classified by the Department of Taxes and Assessments.

Next to its investment in modern telephone equipment, the largest investment of the Bell System is in its 1,600 modern buildings, with a value of \$144,000,000. Ranging in size from twenty-seven stories down to one-story, they are used principally as executive offices, central offices, storehouses and garages. The modern construction of most of the buildings is indicated by the fact that the investment in buildings is now over three times what it was ten years ago.

Every building owned by the Bell System must be so constructed and so situated as to serve with efficiency the telephone public in each locality, and to be a sound investment for future requirements.

keep off strangers, to shoot to kill, if necessary.

Upon their patrol they keep a sharp lookout for sand-boils. These are spots close to the base of the levee that show cracks, out of which muddy water is beginning to boil. Whenever these are found a little levee of sand-bags is thrown round them. The water is allowed to rise to the height of the river and all pressure is removed.

Water is continually seeping through the levees. So long as it is clear there is no danger. The moment it becomes muddy, however, there is danger, and immediate treatment is required. Branches of trees are cut and laid over these weakened places. Sand-bags are then put upon the branches, and the resulting mat securely holds back the water, if made in time.

Whenever boils are threatened, stakes marked by white rags are driven in the ground and the guards are constantly on the alert for the first signs of danger. Every now and then a part of a particularly weak levee will "slough off." Such a condition is critical. If it responds at once to treatment, the situation is saved. But if the levee continues to "slough off," the case is hopeless. The levee will break.

In the Yazoo Delta of the Mississippi, the river late in April was higher than the tops of the chimneys of the negro cabins on the near-by plantations. And yet, says the writer:

In spite of this height and the volume of the escaping waters, their progress in any one direction after they have once broken clear of the levee is slow. They spread out in all directions, seeking the lowest places first. In 1913, when the levee broke three miles north of Mayersville, Issaquena County, Mississippi, it took twelve hours for the water to reach the town.

Many high mounds built by the Indians are scattered about the Delta. Dwellings and barns are built upon some. The others are crowded with neighboring stock in time of overflow.

When the breach is made, the river plows a lake, often one hundred feet in depth, filled with water of the deepest blue.

For several weeks transportation is conducted altogether by boats. In Mayersville, and other levee towns every family has its skiff in good order in the back yard, all ready for any emergency.

Most of the larger cities and towns on or near the river have a system of protection levees. Greenville has a particularly efficient system. All that is required in case of need to make it water-tight is to close with sand-bags the gaps made by the highways leading out of the city. This the authorities had done at the time of this writing, except for a space on all such highways wide enough to allow one vehicle to pass through.

The people who dwell in the lower part of the Yazoo-Mississippi Delta in time of high stage at Vicksburg care very little whether the levee breaks or not. Their lands are overflowed, anyway. The swollen Mississippi sends great volumes of its waters up through the mouth of the Yazoo. Then is seen the strange sight of that river and all its tributaries flowing up-stream. That phenomenon is now (near the end of April) in full operation. Hundreds of thousands of acres of land are under water

A Dead Engine on a Live Street

A FEW sputtering knocks—a convulsive jerk—a sudden stop!

Up with the hood—a frenzied, futile fussing with plugs and wires.

Meanwhile, streets jammed for blocks—drivers yelling—horns blowing—policeman raving!

Annoying—irritating—inconvenient—yet it all shrinks into insignificance beside the damage done to the engine by a single misfiring spark plug or a short-circuited wire.

Worn and loosened bearings, scored cylinders, piston slaps, chattering gears, loss of power and noisy, jerky operation are the inevitable results of neglecting even the smallest defects in the nerve center of the car—the ignition system.

You can protect your car and your comfort by testing the ignition system regularly. It's no longer a complicated task—it now can be done quickly, easily, cleanly by using the

Airco IGNITION GAUGE *The Watchdog of the Ignition System*

Instantly spots the plug that's missing
Locates short-circuits and leaks in high-tension wires

This handy vest-pocket instrument is small enough to reach the most inaccessible part of the ignition system. Its blunt contact cap cannot slip off plug or wire while testing. Cannot get out of order—no wires to connect—no shocks—no danger.

Carry one with you in case something goes wrong on the road.

AIR REDUCTION SALES CO.

The name Airco on this ignition gauge signifies that it embodies all the high standards characteristic of the twenty-one other products of the Air Reduction Sales Company, pioneers in commercializing the elements of the air and large manufacturers of oxygen, acetylene, apparatus, etc., for the oxyacetylene welding and cutting industry. It is most logical that an instrument relying solely for its functioning on Neon—a rare gas of the air—should be built by an organization of such specialized experience.

A Clog in The Carbureter— A Lonely Road— And a Dark Night

A very little thing can paralyze the mechanics of an engine, and bring annoyance and hardship.

Everyone realizes the necessity of taking care of a machine, and of taking warning when it "knocks."

Yet some people expect the body to take care of itself, though its mechanism is far more delicate and complicated than that of any mechanical device.

Carelessness in selecting food, and neglect of warnings has stalled many a human machine when the trip was far from finished.

Grape-Nuts feeds the body scientifically, and it has a wonderful charm for the appetite. The full richness of wheat and malted barley, together with the vital mineral salts which the blood corpuscles and bone structure must have are in this food; and Grape-Nuts is so processed in the making, that it digests quickly and completely.

Try Grape-Nuts with cream or good milk for breakfast, or in place of a heavy, starchy meal for lunch. You'll greatly relish the delicious crispness and flavor of this splendid food, and you will be helping yourself to better health—away from the danger of accidents along the road.

Grape-Nuts—the Body-BUILDER *"There's a Reason"*

PERSONAL GLIMPSES

Continued

—land that, for the most part, had been planted to cotton and corn.

As one stands on the top of the levee at such an attractive city as Greenville, watches the terrific flow of the current in midstream, and then looks down upon the busy streets of the peaceful community twenty feet or more below, one can not help being at least a bit ashamed of one's country. The frail protection against this fearful, sleepless enemy, the makeshift weapons of defense (such as sand-bags and willow branches), the constant danger along these extended levees from the dynamiter! Thoughts of all this come, and then with them the realization that that monster out there, so potential of disaster to a region still prostrate from the effects of the World War, was born hundreds of miles away and nourished and strengthened by nearly all parts of the United States except Mississippi and Louisiana. Surely a Government that can overcome a thousand miles from home the engineering problems of a world-serving canal—problems that baffled the genius of M. de Lesseps—can forever take away from its own people the dread, returning almost every spring, of a flood sent from nearly all the Nation's great watersheds.

When the levee broke nine miles north of Burlington, Iowa, late in April, a gap of 200 feet in the dyke was opened without warning, and the ensuing torrent uprooted trees and swept everything before it. Damages in excess of \$1,000,000 were done to the growing crop. The dramatic story of the break at this place is told by William Nicolls in the Burlington *Hawk-Eye*. He writes:

The disaster occurred at the east levee of the No. 7 district that has withstood the floods for twenty-three years. The levee stands three feet above the highest water-mark made this year. Its sides are well sodded, and it appears thick and secure.

While no danger was apprehended from this particular section of the levee, it has been patrolled like many miles of levee to the south and north of it. Fred Schultz walked the section where the break occurred shortly before 1 o'clock, yesterday afternoon, and when he went home to dinner Art Howell took his place.

About 1:30 o'clock Howell saw water boiling up on the land side of the levee near the home of John Fitzpatrick, who lives on E. T. Barruff's farm.

"The levee's breaking. She is going!" he called to John Fitzpatrick. "Run and get some sacks." Fitzpatrick ran for the sacks, but he was running a futile race with fate.

Before he could reach the sacks the break had widened and the water had cut a trench three feet wide in the levee.

Telephone calls were sent out for help from the Fitzpatrick home. Before many men arrived the crevasse had widened to fifty feet, then to 100 and soon the gap between ends of the levee was 200 feet in width.

Through this dashed a madly racing current of water tearing trees, fences and all obstacles from its path.

Driven by all the power of the Mississippi, a solid wall of water prest against the current that was crowding through the

break. To the eye it appeared as tho the water 100 yards from the crevasse was six feet higher than the mill-race that poured through the cut.

Its force created whirlpools, sucking eddies, and threw waves lapping over each other. Trees were torn from their roots and hurried through the break. Even stumps were uprooted and could be seen whirling away on the yellow tide.

More than 500 acres of land was soon submerged. The home of John Fitzpatrick, some 200 yards from the break and almost due west of the cut, was surrounded and his family driven to the second floor. Fitzpatrick got his wife and two boys in a boat that some fishermen inside the levee rowed to his home.

A ground-hog, burrowing through the levee, or a deep muskrat hole, may have caused the disaster, in the opinion of a local authority. A Burlington poet, Phil Car-speeken, thus sings "The Battle of the Levee":

Haggard and worn, but determined of soul,
Ceaselessly fighting, the valiant patrol
Guarded the ramparts that sought to with-
stand

The foeman that threatened the fair bottom
land—

A foeman all swollen with power and hate,
Who clawed at the ramparts and beat at
the gate,
Crowding and snarling and crouching to
spring—

Here was a battle old Homer could sing!

It seemed that the foeman would fail of
his goal—

He sullenly cringed to the valiant patrol;
The bottom lands smiled when the tillers
were told

"The foe is subsiding—the levee will hold."
And husbandry's fears and forebodings
took wing—

They knew not the foe was but crouching
to spring.

And then came a shout like a bolt from the
blue:

"A break in the rampart—the foeman is
through!"

Gaze at the breach, O ye valiant patrol—
Here is a sight that will sicken your soul!
Seething and raging, the enemy pours
In through the gap, and exultingly roars;
Crumbling the ramparts with vindictive
glee—

Hurling its force like a riotous sea;
Leaping and foaming with demon-like
wrath—

Sweeping and wasting all things in its path.

Slowly but surely the ruin expands,
Strangling the crops of the fair bottom
lands;

Stealthily creeping and claiming its prey,
Ranging aboard with a passion to slay.
Relentless, resistless, the oncoming surge
Grips the meek land like a pestilent
scourge;

Boundless the ravage and fearful the cost.
And bitter the grief when that battle was
lost!

Over the lands that were waving with
wheat,

Fair, teeming lowlands that stretched at
the feet,

The enemy prowls like a ravaging beast,
Slinking afar to the hills on the east,
Poets have sung of the horrors of strife,
And pictured the wanton destruction of
life;

Oh, for a Homer with genius and soul
To sing the defeat of the valiant patrol!

They Left it to a Jury of Filing Clerks

A big mail order house in Buffalo needed new letter files. The firm believed the accuracy and speed of their filing clerks depended largely upon the efficiency of the filing cabinets. Many four-drawer files were tested, and the final choice left entirely to the verdict of a "jury" of filing clerks. The jury after a painstaking trial selected the *Mastercraft* as the most efficient file for standardization.

On *your* next file need, have your file girl inspect the *Mastercraft*. She'll appreciate the advantages of its easy-coasting, full-length opening filing drawers and extraordinary sturdiness. Catalog and name of your nearest Van Dorn dealer upon request.

STEEL LETTER FILES AND OFFICE FURNITURE

USG

*Sheetrock is
wall plaster
— cast in
sections!*

Insert shows the actual thickness of Sheetrock

YOU do not have to put up with makeshift walls and ceilings. You can have rigid, *fireproof, non-warping* walls and ceilings made of highest grade gypsum plaster. All you have to do is use Sheetrock, the fireproof wallboard. It is plaster, cast in sheets, and all ready for use. Any good carpenter can erect it easily and quickly, simply nailing it to the joists or studding. It is smooth-surfaced, tight-jointed, with the USG Patented Edge, and much thicker than the ordinary wall.

Also, its cost is low. Call on your dealer in lumber or builders' supplies for prices of Sheetrock and other wallboards. You will be surprised how little you need pay to have Sheetrock walls and ceilings. Then ask him to tell you all the advantages of Sheetrock—including the ease with which it takes paper, paint or panels, and the way *it lasts as long as the building stands*. You will want Sheetrock in your new construction, alterations and repairs. Write for a copy of "Walls of Worth."

PERSONAL GLIMPSES

Continued from Page 42

As for the remedies, I believe that things will have to work themselves out largely by the passage of time. One of the great dangers, however, is in the departure of the young folks from home at an early age to attend college or to work in a distant office. Our youth are in most cases leaving the home too early, and the tendency is, when once away from the restraining influence of the parents, to attempt to see and to learn as much of life as is possible.

Conditions have improved slightly over a year ago, but the younger generation are still in the grip of a general moral let-down. It is my opinion that conditions will improve eventually, but that practices which were scorned by past generations, will continue.

John G. Seabright, editor of *The Red and Blue*, at the same University, adds an observation to the effect that, "The girls of the younger set are worse than the boys. They smoke and drink, that is, a great number of them, as tho it were nothing, and staying up the whole night to dance is becoming an accustomed happening. The fellows might be to blame for the bad habits of the girls, because they encourage them, more or less, and the young fellows to-day are much more social than they were fifty years ago."

"If there has been any change during the past year," writes Fred G. Livingood, editor of *The Albright Bulletin* at Albright College (Myerstown, Pa.), "it has been for the worse, especially as affecting those young men and women of high-school age. It was my privilege to observe this condition, especially in a small New York city. Following high-school dances it was common to find young men in all-night restaurants too drunk to know what they were about." As for the girls' side of it, the editors of *The Sigma Chi Quarterly*, Chester W. Cleveland, says that: "There is more smoking and drinking among them than ever before, and 'petting' is much more common. Their dress has become more daring, and their language has lost some in refinement." Philip McMullin, who edits *The Southwestern Collegian*, official publication of Southwestern College (Winfield Kan.), asserts that: "Young people are becoming more lax in their

conversation, a marked tendency that is noticed in the schools, on the street and at dances." Another student editor, who asks us not to publish his name, tho he allows us to publish that of his college, the Stevens Institute of Technology, says.

Conditions do not improve. Rather few girls try to look "nice," but seek to look "attractive" and be taken to shows at any cost. Perhaps they are only anticipating the desires of the young men. The sub rosa circulation of shady stories between both sexes does not cast a favorable light on the problem.

"The general opinion in this vicinity,"

reports Merlo Pusey, editor of *Gold and Blue*, at Latter Day Saints University (Salt Lake City), "seems to be that the moral standards are not as high as they were a few years ago. There is no doubt but that the growth of the use of the cigaret, especially among the young women of our country, is demoralizing." Writing from the Phi Kappa Psi House at Evanston, Ill., William G. Harsin remarks:

One outstanding reflection on the young set of to-day is the reckless pursuit of pleasure. Dancing has become far more popular—and far less respectable. Altho "jazz" is on the wane, if one were to compare dancing with that of six years ago, he would unhesitatingly decide that there is a distinctly lower level in the spirit and

conduct of dancers to-day. And not a few in the best of society are allowing their baser natures to dominate in the ballroom.

Restlessness is another marked tendency. Most of the young people are drifting about or waiting to change. There is dissatisfaction in every field young people enter. In universities, altho there is increased registration in practical or useful courses in preference to the classics, there is a less serious attitude on students' part, according to professors, and an increasing number doing just enough to get by.

Even more outspoken is Llewellyn A. Wilcox, editor of *The Mountain Echo*, published by the students at Pacific Union College (St. Helena, Cal.). He says:

Call me a pessimist; I choose a sane pessimism rather than the optimism of the ostrich who buries his head in the desert sands and thinks himself safe from the danger he will not see.

Society is not only undergoing a revolution, it is experiencing a devil-ution. Not only is it undergoing, but it is going under.

"DEVOLUTION" THREATENS

Both in morals and in manners, writes James M. Gray, editor of *The Moody Bible Institute Monthly*, "society is undergoing a steady, uninterrupted degeneration."

A risk that cannot be justified

The danger to a whole community from a stoppage of the water supply is so serious—so colossal—that no such risk should be tolerated.

Fire might rage unchecked, sewage might cause epidemics, industry might come to a stop, should the water supply fail. The only remedy is prevention—or the nearest thing to it humanly possible.

No service, perhaps, is proof against every emergency. But water mains of Cast Iron Pipe will not wear out, will not rust out, will not become pitted so as to necessitate replacement within the lifetime of man.

Cast iron, which protects itself from corrosion by a thin coating of surface rust, lasts for centuries. The first Cast Iron Pipe, laid 263 years ago, is still giving good service.

Cast iron reduces the risk to the lowest terms attainable.

"Pipe and the Public Welfare"—an illustrated cloth-bound book—is full of interest. Sent postpaid for 25c

PERSONAL GLIMPSES

Continued

If checked for a moment by last year's agitation, the riotous torrent of immorality sweeps onward more relentless than ever. And the appalling menace of this downward trend is the callousness of the popular mind to it. The sexual is flaunted everywhere, and through constant view of the suggestive and salacious, the public conscience, seared or paralyzed, takes it now as a matter of course. The very reticence of the press and platform to moral conditions must be looked upon as ominous, rather than as

"SELF-IGNORANCE."

This is at the basis of most of the troubles now credited to the younger generation, believes President A. McKenzie Meldrum, of Spokane University.

indicative of improvement. We don't know where we're going, and we don't care!

Unless from its imperiled sleep over the pit of moral chaos, American civilization shall suddenly awake, it sleeps the sleep of death!

Jazz is a little more reckless, the movies a little more obscene, the dances a little more daring, and manners a little more loose than last year. More girls are smoking cigarets and are aspiring to be vamps and flappers.

In certain quarters it may be argued that students' testimony, tho based upon a close-up view of conditions, may be somewhat extreme in its conclusions, as youth now and then lacks poise of judgment. But college presidents are not noted for any such deficiency, and at best a few of them accept the students' opinion practically at face value, having tested it, doubtless, by observations of their own. Thus B. H. Kroeze, president of Jamestown College (Jamestown, N. D.), declares, in a way that suggests comparisons with the more pessimistic student editors:

It is shocking to the sensibilities of men the way women love to display themselves in modern dress. The thought of the body is excluding appreciation of the values of the soul, and our modern youth will grow up with a minimum concern for the welfare

of the soul and with a maximum and abnormal development of bodily interests. It would seem that mothers are neglectful to an extreme degree of the modesty and virtuous grace of their daughters, which, after all, are the virtues which true men love and admire. Men are forced to look up to avoid unseemly display by the modern woman, and how she can avoid realizing this fact is a marvel in femininity.

Ignorance of their own natures, believes President A. Mackenzie Meldrun of Spokane University, is at the bottom of much of the trouble. He writes:

Our young people do not know them-

A CRITIC OF DRESS.

"Too many of our young women are improperly clad," declares C. B. Riddle, the editor of *The Christian Sun*, official organ of the Southern Christian Convention.

selves, nor have they learned the sacred purpose of their being. One of the most alarming facts in the world to-day is man's ignorance of self. The home, the school, the press, the platform and the pulpit must unite in combating this noisome pestilence that is spreading a sable cloud of shame, disease and death over every community in the land; sowing seeds of moral, mental, physical and spiritual degeneracy, to be reaped by our children in a harvest of national decay.

We are so anxious to teach the young of the nation the various branches of academic knowledge, rules of etiquette, and forms of good society, that plain talks to the boys and girls seem to be divorced from the family curriculum. This is a deplorable mistake, against which I inveigh and offer my most solemn protest; for I verily believe it is more important for our sons to know themselves, than to know Plato and Virgil: and it is more imperatively necessary for our daughters to know themselves than to know the histories of ancient Greece and Rome.

"Manners are superficially better and fundamentally worse," remarks President Harry Morehouse Gage of Coe College, Cedar Rapids, Ia. "There has been a pronounced moral sag. Things that are done now are in marked contrast to the vaulting moral enthusiasm of three or four years ago. Generally speaking, there is not enough restraint. Freedom is not balanced

The Touring Car

A New Ideal in Motor Car Value

A new ideal has come true—plainly and unmistakably. Oakland deliberately planned to make the New Oakland the finest light-weight six that advanced engineering, highest grade materials, and expert workmanship could build.

This is borne out in the rugged Oakland chassis; in the remarkable efficiency of Oakland's own overhead-valve six-cylinder engine; and in the many features which the New Oakland shares with much higher priced cars.

Crowning this splendid mechanism are the five new and distinctive Oakland bodies—of a beauty, comfort and fine equipment unequalled anywhere in their price range.

These things prove Oakland's leadership in light-weight six manufacture. Oakland is proving that leadership to an evergrowing number of Oakland owners by its reliable performance, backed by the 15,000 mile guarantee.

See this fine car! Test it thoroughly! Compare it with other cars! The New Oakland Six—the light-weight six of the General Motors group—is by far the finest and most desirable automobile in its price class.

by self-control. One is reminded that "It is good for a man to bear the yoke in his youth." Another college president suggests that perhaps all this is "a reaction from the idealism of 1914-18." Another calls it a "perverted interpretation of the principle of self-determination."

Among the college deans, who are especially close to student activities, we

HE BLAMES SUFFRAGE.

"It seems to be necessary for women to imitate the vices of men," writes Dean James S. Stevens, of the University of Maine, "in order to prove actual equality with them."

find a number who hold views of the same order as those just quoted. Clyde Brooks, dean of the University of Alabama, tells us, in a way that compares with the most pessimistic student editors, college presidents, and religious editors:

There is an appalling lack of industry, thrift, hard study, and old-fashioned honesty of purpose among college students. The present-day college student knows nothing of spending several hours every day in actual hard work on his studies. In place of this he is busily engaged in attending social functions and otherwise amusing himself.

There is a good deal of drinking and gambling going on. More than there was some ten or twelve years ago.

The co-eds are taking up cigaret-smoking in increasing numbers. They continue to dress extremely, and to dance more than is good for them. The percentage of "bad ones" is higher than ten years ago.

The facial expression of a graduating class is *hardened* and lacking in that peculiar quality which we call a fine, open, honest face.

"The greatest problem we are facing to-day is immorality in our whole social structure," says Mrs. Eva M. Blue, dean of women at Gooding College (Gooding, Ia.). She adds:

This is not the fault of youth. Can we

Eastern college for women, writes, in a hardly less condemnatory vein:

I am a woman who was born immediately after the Civil War, and at thirteen and fourteen was still going through what we then called a reconstruction period. The older people were somewhat alarmed at the freedom of the younger ones. As I look back over that time, I see that the only freedom we were really allowed was the privilege of walking a few blocks from our own homes with a young man to some well-chaperoned dance. We were also allowed to go horseback riding. Moonlight excursions with several chaperones were the most

"MORAL CHAOS."

J. I. Riddle, a high school principal at Attalla, Alabama, calls upon American civilization to awaken from its "imperiled sleep over the pit of moral chaos before it is too late."

advanced liberty that was allowed us. We had had no such thing as sex hygiene taught us and we never would have dreamed of mentioning this subject to young men of our acquaintance. We were extremely careful never to cross our legs or to stand with our feet spread wide apart. We were impressed with the idea by our elders that these things were vulgar and a sign of ill-breeding. We were also told that we should not allow the young men with whom we associated to handle or kiss us, as nice girls did not wish that kind of girl for a wife. A man wanted a girl for his wife who had not been kissed by other men. I do not believe that many girls were given the reasons why they should not do these things.

To-day we have the sex question openly discussed in mixed classes. We have men professors teaching biology to girls in the plainest and most advanced fashion. There is no secret of the human body or of sex that is not pretty well known to the average girl of sixteen. I have had girls of eighteen tell me that sex was a subject of conversation between the modern girl and young men. I would almost believe from observation that sex was a dead issue were it not that we still have marriage, which is the ultimate end of sex. I am not prepared to say that the modern girl is any less moral than we were, but I do say that there are two words which can be applied to her and which she deserves from her conduct—

Factory and Executive Offices: CHICAGO, U. S. A.

Redwood should be specified for

Exterior Construction
Including—Colonial siding, clapboards, shingles, door and window frames, gutters, eaves, water tables and mud-sills—porch rail, balusters and columns—mouldings and lattice, Pickets and fencing—Pergolas and green-houses.

Interior Finish
Natural, stained or painted. Wood block floors.

Industrial Uses
Tanks and vats for water, chemicals and oil. Factory roofs and gutters. Wood block flooring.

Wood Specialties
Such as—Caskets and burial boxes—Incubators and ice cream cabinets—Cigar and candy boxes, etc.

Railroad Uses
Such as—Railroad ties and tunnel timbers—Signal wire conduits and water tanks—Car siding and roofing.

Farm and Dairy Uses
Such as—Silos, tanks and troughs—Hog feeders and implement sheds—Wood block floors, etc.

What Other Wood Can Equal This Record?

SIXTY-NINE years ago this Redwood timber became a gate post. It served 50 years, through rain and drought, was dug up to let a railway through, and now perpetuates the name of one of the country's pioneer ranchmen. Sound above and below ground, this post offers convincing testimony of Redwood's remarkable rot-resistance.

A natural, odorless preservative, which permeates Redwood during the tree's growth, protects Redwood against all sorts of fungus, rot and decay. Wood-boring worms and insects leave Redwood alone. Redwood burns slowly because it contains no pitch or resin—reduces the fire hazard wherever used.

The cost of Redwood compares favorably with that of other lumber, which cannot compare with Redwood for utility and long service.

If you are planning to build, write for our "Redwood Homes Booklet." To architects, builders and engineers we will send our "Construction Digest" and our "Engineering Digest."

For June Days These Bubble-Grain Delights

In the Morning

Mix Puffed Rice with your berries. These flimsy, nut-like morsels add a delicious blend.

Consider how Puffed Rice tastes served with cream and sugar. It is like nut bubbles. Then imagine what it adds to fruit.

Afternoons

Lightly douse with melted butter for hungry children after school. Then it forms a food confection.

Use as garnish on ice cream, as leading chefs are doing.

Use like nut-meats in home candy making.

Also as toasted wafers for your soups.

At Night

The ideal dish for children is Puffed Wheat in milk. Whole wheat, with its 16 elements, forms a practically complete food.

Whole wheat, with every food cell blasted, easily digests.

Puffed Wheat Puffed Rice

Whole grains puffed to 8 times normal size

Made by Prof. Anderson's process. Over 125 million steam explosions are caused in every kernel. Every food cell is broken, so digestion is made easy and complete. High heat makes them flavory. Puffing makes them thin and flaky. So these—the ideal foods for children—are the foods they love the best.

PERSONAL GLIMPSES

Continued

vulgar and brazen. There is a term which the French apply to women who indulge in intimacies with the opposite sex which are not criminal—*demi-vierge*. As I have watched the familiarities which pass between the modern young girl and young man in their dancing and in their daily life, this phrase has often come to my mind.

Katharine S. Alvord, Dean of Women at De Pauw University (Greencastle, Ind.),

HE SEES A "MORAL SAG."

"Freedom is not balanced by self-control," believes President Gage of Coe College, who finds that we are still in the midst of the reaction that followed the idealism of the War years.

observes that: "The younger part of society, like the older, is feeling its way out of the tumble-down fabric which the war precipitated." Another dean, who desires to be nameless, takes a similar view:

Ever since the strain of war ceased late in 1918, young America has been showing less and less of the restraint which we consider an evidence of modesty, good breeding, and sound character. So far as I can see, conditions are no better than a year ago. Skirts are even shorter, waists as low as ever, more bobbed hair than ever, girls more shameless in their flirtations, boys more eager, bold and sensual in their looks and manners. I believe that Zane Grey's new story, "The Day of the Beast," now appearing in the *Country Gentleman*, is a timely description of this condition. Let us hope that he will find a solution. I know none.

Irma G. Voigt, dean of women at Ohio University, while "not fearful for the individual," as "in every generation the great individual will stand forth," nevertheless admits:

I do fear for a certain subtle carelessness that is slowly creeping into human relationships and sex relationships, that seems to be gnawing at the very foundations of the home.

We have glorified personal liberties and individual rights to the point that they are

beginning to spell lack of self-control and total irresponsibility in the matters of moral obligation to society. A favorite expression of youth to-day is "Public Opinion be hanged"—but it never has been hanged and never will be.

Writing from St. Stephen's College at Annandale-on-Hudson, Dean Orville F. Davidson expresses the opinion that, "The heart of the matter, the painful truth, seems to be, not that standards have changed, but that there are no standards at all. Every subject is debatable and is debated, especially by the inexperienced, from the length of skirts to free love, from highly questionable modes of dancing to more than questionable political experiments involving the destinies of whole peoples. Such debate may be stimulating, but the final appeal is usually not to any serious standards of morals or intellect, but to the caprice of selfish predilection of the individual." This general point of view also appeals to Rockwell D. Hunt, dean of the Graduate School of the University of Southern California. He observes:

Young girls, in particular, in their dress and their attitude toward young men, are often without the restraints or modest reserve that were formerly deemed indispensable. There has arisen in these latter days a pernicious near-cult of what might be called flapperolatry, fanned into fierce flame by a cheap type of journalism, which amounts often to a challenge to young men to exceed all speed limits of immodesty and to the girls themselves to throw to the winds all time-honored niceties of maidenly reserve.

Undoubtedly the reign of jazz (*jazzocracy*) and degraded forms of the dance, heightened by the disease that may be called *movieitis*, is in part responsible for certain deplorable tendencies now quite pronounced. So complete is the revelation by virtue of our every-day practices that, as a writer remarks, "Neither sex has any illusions left regarding the other."

Dean Theo. P. Campbell of the Virginia Polytechnic Institute deploras "a great deal of general looseness in our younger generation, both of ideas and of conduct," and Dean Burris, of the College for Teachers at the University of Cincinnati, writes:

I do not think that conditions have changed for the better within the past year, and if I may venture an opinion as to the cause of the present situation, I would say that human conduct, in general, and that of the youth, in particular, is at last finding its fullest expression of that vicious doctrine of undisciplined spontaneity which has found its best exemplar in Rousseau. As a consequence, it seems to me that an increasing number of people, young and old, are carrying this doctrine to its logical conclusion by trying to find how to become happy without becoming moral.

The remedy obviously lies in the direction pointed out by John Locke, where he states: "The great principle and foundation of all virtue and worth is placed in this: that a man is able to deny himself his own desires, cross his own inclinations, and purely follow what reason directs as best, tho the appetite lean the other way." In a word, it is the realization of reason without which a community of obedience is preferable to a community of will.

Low Fares to the Greatest of Outdoor Lands

The Puget Sound Country can now be visited at remarkably low cost.

It's your chance to see this land of big distances—of inspiring mountain views—lakes and glaciers—primeval forests—snow-capped peaks—sheltered harbors—ocean beaches. Mt. Rainier National Park, the Olympic Peninsula, Puget Sound, the Pacific Ocean and the big timbers are but few of the attractions of this most diversified vacation region.

En route travel over the World's Longest Electrified Railroad. Unsurpassed mountain scenery! Open observation cars! No smoke or cinders. The famous "Olympian" and the "Columbian" between Chicago and the Pacific Northwest are electrically operated for 649 miles.

You can return through California at slight additional cost. Choice of routes.

PERSONAL GLIMPSES

Continued

"I perceive no change in the situation during the past year," writes Sylvanus Morris, dean of the Law Department at the University of Georgia. The causes of the present state of affairs in his opinion, are:

1. Immodest dressing and improper familiarity with men on the part of young women.
2. Insubordination of young men, who are no longer required to respect parental authority.

The remedy lies primarily with the mothers of young women. The reasons why it is not applied are given as:

1. The desire for attention to their daughters overrules conscience.
2. Preoccupation in other affairs cause neglect of family duty.
3. The church having lost her authority, the family having neglected its duty, moral training is relegated to the public school.

A new reason is discovered by Dean James S. Stevens from the University of Maine, who writes that, "Having been heartily opposed to the extension of suffrage to women, I am perhaps overinclined to hold this responsible for the immodest and immoral behavior which is characterizing the present era. It seems to be necessary for women to imitate the vices of man in order to prove actual equality with him." This opinion is held also by Warren A. Seavey, dean of the College of Law at the University of Nebraska. "Political and economic liberty," he points out, "has come to women, who, retaining their sex instincts and not yet knowing how to use their freedom, are apt to claim the virtues and ape the vices of men." Another college dean (whose name is withheld) turns back to a consideration of the relation between manners and morals. He writes:

Society can protect its morals only by manners, and none, I think, can deny that manners are changing. In my opinion the change facilitates a breaking down of morals. I speak only of conditions as I personally am wrestling with them, not in any wide sociological sense.

I find that the younger part of society, the average young men and women, hoot at the conventionalities which have been recognized in the past as their best safeguard. The bars are down, or fast coming down, and the youngsters snap their fingers at social dangers, hotly denying, in cases I could cite, the very existence of such to the well-informed.

It is difficult to generalize because of outstanding exceptions, but I am constrained to say that I find the younger part of society of the same relative status, more than formerly, disposed to condone business obliquity, to disregard ordinary courtesy, to proclaim itself superior to social dangers, not amenable to constituted authority, self-confident to the extent of walking straight into the fiery furnace along with the Hebrew children, in full expectation of coming through unhurt.

I recently witnessed the brazen (or shall I

say mistaken?) defiance of a young man as he challenged "the world" to show wherein he had jeopardized the fair name of a very young girl whom he had kept in the deep and secret places of the forest many hours, not for the sport of hunting, fishing or the like, but for love-making pure and simple.

Yes, without the restraining hand, along with the sympathetic understanding which we owe them, I anticipate a more or less pronounced relapse into a period of moral laxity within the next few years. We know of conditions in former times which only Blue Laws, enforced with the Puritan's sledge-hammer, could overcome. To-day other remedies suggest themselves, and certainly of an opposite sort, which already are actively at work, but we should move faster with them.

By way of broadening the scope of its inquiry, as well as of investigating conditions among still younger young folks, THE DIGEST invited response from school superintendents and the principals of high schools. To a certain degree, college students are recruited from the so-called "highbrow" element. That element contributes less extensively to the rank and file in the high school. There we have the sons and daughters of average Americans. How are those sons and daughters conducting themselves?

"I am a young man, a war veteran," writes George Buckley, principal of the Cooper (Tex.) high school, "and can hardly be accused of judging by the arbitrary standards of age; yet when I view the products our high schools are turning out as future citizens, I am appalled.

"It seems to be a negative immorality, a general indifference to any high ideals or ambitions. A hedonistic philosophy seems to prevail, and the remarks I constantly hear are: 'Have a good time while you are alive, for you are a long time dead,' and 'Enjoy yourself while you are young,' etc." Mr. T. W. Conway, superintendent of schools at Tularosa, N. M., finds similarly that "Society, the younger part of it, is undergoing a great change in manners and morals. The shameless dancing and the brief dressing of young girls have struck our Western country very hard. Bobbed hair and bobbed skirts are becoming almost unendurable in our small Western towns." "In my opinion," writes G. W. Ingersoll, superintendent of schools at Constantine, Mich.: "The revolution in morals and manners is still for the degradation of young people rather than for their betterment. I can see no place in society for bobbed hair, dresses that do not cover the knee-caps, and like contraptions. I think it high time to call a halt in regard to dress and mannerisms." Turning to the changed political basis on which the modern woman finds herself, Paul B. Keeton, head of the School of Education at the Southwestern Teachers' College, writes:

During the late war and since there has been a general "shaking up" of customs, manners, etc., and along with political changes involving women there is growing a different consciousness in regard to the sexes. There appears to me to be a general

Dad, this is the greatest shoe I ever had!

We have put the principles of our athletic shoes in this shoe for every day work and play. The Hood Werkshu is light, though its upper is of sturdy, brown mail-bag duck—the brown conceals all ordinary soil. It is flexible—affords the feet welcome relief from stiff leathers. It is cool and comfortable as a summer shoe should be. You walk on air with its patented pneumatic heel. Its tough sole of tire-tread stock reduces the cost of footwear while it allows that freedom of activity that is every boy's birthright. What is good enough for the boy is good enough for Dad! And for other members of the family, too! The Hood Werkshu is made for all of them.

DON'T forget the children. The Fenway Cross Strap Sandal is made especially for their growing young feet. They will romp longer out-of-doors, scratch no more floors, and save the cost of expensive leather.

THE Klaykort for tennis especially, but for all outdoor sports is a better *buy* than *sneakers*. Light, surefooted and fast, and how they *do* wear! Full sport trimmed. Insist upon Hood Klaykort—refuse a substitute.

change in attitude and in action regarding the position of woman which largely explains many questions that arise to-day of this nature. Since woman is taking her place aside man politically there seems to be a disposition to place her aside man in other ways and society is coming to expect the same from woman and to demand the same and no more from man. I believe, therefore, that there is a general change taking place both in morals and manners that will mark the lives of the next generation in a very noticeable way. I do not think the changes all bad, but I fear that the net result will not be wholesome.

"There was a time, our fathers tell us," observes Daly Thompson, principal of the Collierville School (Collierville, Tenn.), "when the Southern lad of fifteen to twenty years of age would never meet an acquaintance of the opposite sex but that he would politely bow and tip his hat. To-day he greets the young girl of his acquaintance with a familiar slap on the back or shoulder—even on the street does he do this. When seated in a room, he never rises when a lady enters, unless perhaps she be an invited guest, upon her arrival.

"His remarks about girls as they pass his particular loafing-corner uptown are always bordering on the vulgar. He has no wholesome remarks to make.

"The lad is not wholly to blame for this. The manners of the girls too often warrant such comments. The two to six inches of bare skin between the top of her 'own roll' and the bottom of her skirt are conducive to such remarks; so are the transparent skirts.

"Just two days ago I passed four girls, whom I judged to be about sixteen years old, standing in the middle of the pavement on Main Street in one of our larger Southern cities. As I passed I heard one of them say: 'I just told him I did not give a "God dam."' If such language is ever proper, it surely is not proper for street usage." J. I. Riddle, high-school principal, at Attalla, Ala., gives this testimony:

The rank and file of small town and city high-school young people are amusement mad. I do not believe that conditions are appreciably worse than they were last year, but I see no improvement. Between midnight dances, careless dress and its suggestions, and sex-motivated moving pictures, high-school training in manners and culture has a poor chance.

In view of all this complaint, one asks, not unnaturally, "What are we going to do about it?" The questionnaire has brought in a curiously uniform array of answers. While many of them emphasize the need for a revival of old-fashioned religious instruction and many more demand a reform of the movies and of current fiction, an overwhelming majority declare that improvement can come only from influences brought to bear in the home. If girls dress

WILL POWER AND WORK

by Jules Payot, Litt.D., Ph.D.

Authorized Translation from the French by Richard Duffy
(FIRST AMERICAN EDITION)

More than thirty editions of this author's previous work, "Education of the Will," have passed into the hands of forward-looking Americans, to their everlasting benefit. In this NEW volume, "Will Power and Work," M. Payot shows you how to increase your mental efficiency, how to intensify your power of accomplishment, how to link your will to your work. In a manner irresistibly helpful, you are given the theory and practise of self-culture.

You are shown how to read systematically and intelligently, how to build up a dependable memory, how to obtain control of that strangely uncertain instrument, the will, and how to supplement the lack or rightly assimilate the surplus of education that fate has decreed for you. As a clear, sympathetic, and authoritative guide to true wisdom, strength of character, and the development of that practical energy which makes for real success in life, this new book will be a boon to you.

Cloth, 12mo. 462 pages

indecently, dance shockingly, go traveling around the country at night in chaperonless automobiles, encourage the "snuggle puppy" in his "petting," smoke cigars, drink whatever they can find to drink, swear like pirates, and talk freely of things they ought to leave unmentioned, our correspondents ask, "Where are their mothers?" If boys are as wild, where are their fathers? All through the mass of replies from horrified onlookers runs this censure of the American home. The great need, we are told, is a reassertion of parental authority. Indeed, it is probable that this view would be indorsed even by the correspondent who asserts that in his own community the youngsters have been helped along the road to righteousness by the attentions they are receiving from the Ku Klux Klan.

However, not by any means all the testimony brought out by THE DIGEST's questionnaire is alarming. Next week we shall consider the replies from observers who look upon the ways of the rising generation with reserved, or even enthusiastic, approval.

In the meantime, members of the Parents League of Brooklyn have decided not only that conditions are capable of improvement but also that a certain set of edicts may help in the process. League members, reports the *New York Times*, will see that several blue laws for the young are enforced in their own families, and will try to extend the movement to other Brooklyn homes. The rules which are to be applied to flappers run as follows:

1. Hours for evening parties are limited from 8:30 to 12. It's curfew after midnight.
2. Parties are to be held only on Friday and Saturday nights.
3. Simple, refined clothes are to be worn at all times.
4. Chaperones must be present at all parties.
5. Chaperones will accompany the girls home.
6. Censorship over the plays and movies to be attended.
7. Improper dancing forbidden.
8. No refreshments served after dances.
9. Not more than one party to be attended on the same evening.

Here are the rules which the smaller boys and girls, those of primary school age, must observe:

1. Entertain in small groups.
2. Serve very simple refreshments at parties.
3. All games must be supervised.
4. Use simple favors and no prizes.
5. Parties must end at 8:30 P. M.
6. Simple afternoon dress is to be worn on all occasions.
7. No movies or theaters, except those recommended by the school or investigated and approved by parents.

"We can do nothing with the older boys and girls, whose customs have become more or less established," said Mrs. Otto Affeld of 113 Willow Street, Brooklyn, yesterday. Mrs. Affeld is president of the league. Girls over 18 years of age are left to whatever rules their parents prescribe.

A steel counter and filing cabinet-in one!

IN THE Art Metal Sectional Counter line you have a counter that is also a battery of filing cabinets.

Result — no waste space — no lost motion — a better looking, more workmanlike office.

ADVERTISING RIGHTS IN CITY NAMES

"HE that filches from me my good name," is a real highway robber, *Iago* might say, and while his ideas are pretty generally accepted as regards individuals there seems to be some question as to whether a city can prevent any one from using its own fair name to further the sale of his wares. This delicate question has been put up to the Federal Trade Commission in concrete form by clothing manufacturers of Rochester, New York. As the *New York Times* notes on its market page:

The latter show that, by extensive and expensive advertising for many years, the general public has been informed of the excellence of the tailoring put into the apparel made in the Flower City, distinguished as the Flour City in the days when Genesee flour was the standard. In this way, a favorable impression has been created for all clothing made in Rochester or so labeled. Advantage has been taken of this reputation, it is claimed, by makers of clothing in this city and elsewhere who are labeling their garments as "Rochester made," or are otherwise tending to lead the public to believe the goods are manufactured in that city. This conduct is de-

clared to be a form of unfair competition which the Federal Trade Commission is asked to stop. As against the complaint, it was shown that more than one class of clothing is turned out in Rochester and that there are sixteen or eighteen places in the United States bearing the name of Rochester. And the query is raised as to whether there can be any protection accorded the name of a city or locality to distinguish wares. From the Atlantic to the Pacific and from the Great Lakes to the Gulf the country is dotted with "Troy" laundries, "Boston" and "New York" stores, &c., against which no complaint is made by the cities mentioned. Yet there are times when the claims of localities to the use of their names receive attention. Perhaps the most notable in the world's history was the writing into the Versailles Treaty among its economic provisions the one under which the Germans are forbidden to use the word "champagne" to designate their own effervescent wines.

Hearings on the complaint made by the Rochester clothing manufacturers have been held by the Federal Trade Commission in Rochester, New York and Washington, during recent weeks, as the *New York Daily News Record*, a textile trade organ, informs us.

ALL THE LIBERTYS AT PAR

WHILE Victory Bonds have been selling at or above par for some months and one or two other issues have occasionally touched par, it was not until the last day of May that the bond market reports showed all the Liberty Bond issues selling at 100 or better; at least that was the first such occasion which bond dealers could recall, as the *New York Tribune* notes. The uniform strength of Liberty bonds rather than the outstanding performance of any one issue was the day's

Copyrighted, 1921, by the Star Company.

THE RETURNING PRODIGAL.

—Murphy in the *New York American*.

feature, "the spread between the various bonds at their top being only 66 cents. Several of the issues receded fractionally below par before the close. Continuance of general buying rather than any new development was the basis of the movement." The return of these Government war obligations to par has, of course, been predicted by all the financial authorities and their actual return must give cheer to those who have not been compelled to sacrifice their holdings. It is, of course, one more reminder of the essential soundness of our Government. We quote the encouraging figures for May 31 from the *New York Tribune's* bond market column:

	Quotations			Net Chge.

What "Burroughs" Means to Business

From the original "Adding Machine" has developed a diversified line of figuring machines for service to manufacturing, banking, transportation, wholesaling and retailing.

TWENTY years ago the Burroughs Adding Machine seemed marvelous in its capacity to list items rapidly and compute the total with automatic accuracy.

But the banker said: "I must have a daily balance;" and Burroughs gave him automatic subtraction. The banker and the business man said: "Why not post directly to the ledger?" and Burroughs developed a carriage into which the ledger leaf or card could be inserted—automatically moving from column to column.

The jobber and the accountant needed rapid calculating to get at a price, an estimate or a cost—and the Burroughs Calculator took its place in business.

Many businesses said: "How can we save time in distributing

sales or costs?"—and Burroughs answered with the "Duplex," a double adding machine which delivers individual totals and accumulates a grand total simultaneously.

Now Burroughs has acquired the Moon-Hopkins Billing Machine—the only machine ever invented that produces a complete bill at one operation, including the type-written itemization, automatic extensions and totals.

Whatever the figure-needs of your business, Burroughs has already given thought to them, and to the easiest, shortest, most economical way to satisfy them.

That is our conception of what "Burroughs" means to business—the best way available today and a still better way tomorrow.

Burroughs Adding Machine Company, Detroit, Michigan

Burroughs manufactures four classes of machines in many different styles and sizes to meet the varied figuring requirements of every kind of business. These machines are priced as low as \$150 with small down payment

and the balance in easy monthly payments. Burroughs maintains sales and service organizations in 212 principal cities to give you the proper figuring equipment and insure you in its continuous, profitable operation.

For desk, counter or office use—triple visibility, automatic printing of all ciphers and punctuation, wide or narrow carriage.

Adding

For writing a complete bill in a single operation, including a typewritten itemization, automatic extensions and total.

Billing

For ledger posting, statement writing, distribution, stock records, payrolls, transit letters and other bookkeeping work.

Bookkeeping

For rapid-fire figuring and checking of invoices, discounts and estimates—jobs that require only a quick, accurate answer.

THE ARRIVAL OF THE HORSELESS FARMER

IF all the farm boys are leaving the farms to work in the city factories, it may be they are doing so because the factories have to make so many machines and appliances for the farmers. Of course every one realizes that the American farmer is increasingly making use of the products of inventive genius, but for the first time, the National City Bank of New York notes in its *Trade Record*, the 1920 Federal census presents figures on the number of automobiles, motor trucks, telephones and farm tractors in use on the farms of the country, and the number having "water piped into the house." These figures, it is remarked, indicate that the automobile and telephone are now a big factor in farm life, not merely as a comfort and convenience but as an actual aid in business. The *Trade Record* sums up the census figures as follows:

The number of telephones, by which the farmer may communicate with his local trade center or with the great cities in which the prices and markets for his products are determined, is officially stated at 2,498,493 in 1920, while another authority puts the total number of phones in all the United States "without regard to ownership" at the end of 1920 at 13,411,379, which suggests that nearly one-fifth of the phones in the United States are now in the farm home and farm business service; while 38 per cent. of the reporting farms were equipped with telephone service in 1920.

The automobile statistics are also extremely suggestive. They show the number of automobiles on farms in 1920 at 2,146,362, while figures compiled by *Automotive Industries* put the total of automobiles in use in all the United States in 1920 at 7,904,000, suggesting that the farmers owned in that year considerably more than one-fourth of the automobiles of the country, to say nothing of the 139,000 motor trucks and 246,000 farm tractors reported in operation on the farms in 1920. Over 30 per cent. of the reporting farms in 1920 utilized automobiles.

Still another evidence of the disposition of the farmer to utilize machinery in increasing his business activities is found in the fact that the value of his "farm implements and machinery" reported in 1920 was nearly three times as much as in 1910, five times as much as in 1900 and seven times as much as in 1890. The official valuation of farm implements and machinery in 1920 is \$3,195,000,000 against \$1,265,000,000 in 1910, \$750,000,000 in 1900 and \$494,000,000 in 1890.

It is not surprising then, in view of the increasing use by the farmer of these time and labor saving devices, the telephone, the automobile, the motor truck and the farm tractor, coupled with the enormous increase in his farm implements and machinery, to find that the census reports the value of horses on farms in 1920 only \$1,782,000,000 against \$2,084,000,000 in 1910, a decrease of 14% in value of horses, while all other classes of farm animals increased in value in the same period.

STANDARD DICTIONARY superiority quickly becomes plain to the man or woman who investigates.

If You Own a Home Or Plan to Build

LEARN HOW to raise the money—what materials to use—selecting roofing—heating, ventilating, and lighting systems—how to handle tools and do odd jobs in carpentry, painting plumbing—how to build a concrete path or garage, or fix a broken sash-cord—how to make an iceless icebox. A thousand bits of valuable information in that practical, common sense, non-technical manual—the

HOUSE OWNER'S BOOK

By Allen L. Churchill and Leonard Wickenden

a new and interesting illustrated book that gives you the chance to profit by the costly experience of others in the construction, care, and conduct of a home. Every one who owns or rents a home, or is planning to build, can save money by following suggestions in this book.

May 31.—The Reparations Commission approves the German reply to its ultimatum, and decides to grant Germany a provisional moratorium for 1922.

Any move toward the establishment of a republic in Ireland will be halted by the British Government, announces Winston Churchill, Colonial Secretary, in the House of Commons.

Nine persons are killed and nineteen are wounded in fierce fighting in Belfast, following the shooting of two constables.

The Reichstag tacitly endorses the German Government's policy in accepting the conditions imposed by the Reparations Commission by rejecting a vote of no confidence brought against Chancellor Wirth by the Nationalists.

June 1.—President Hsu Shih-chang, of the Peking Government, resigns as a step toward the unification of China.

June 2.—The Chamber of Deputies gives Premier Poincaré a vote of confidence on his Genoa policy by a majority of 484 to 100.

Outbreaks between Polish insurgents and Germans in Upper Silesia have resulted in the death of six people and the maltreatment and wounding of scores, according to dispatches from Berlin.

South Irish and Ulster forces engage in a seven-hour battle on the Louth-Armagh border, and three special constables are reported killed.

The British Government has completed arrangements to pay next fall interest amounting to £25,000,000 on the British debt to the United States.

June 3.—Discussion of Soviet principles must be barred at the proposed Hague Conference, says Premier Poincaré in a note to all the principal governments, exclusive of Russia and Germany, and only debts, property rights and credits may be treated.

Nikolai Lenin, Russian Bolshevik Premier, has suffered a paralytic stroke and is seriously ill, according to information received in Berlin.

Li Yuan-Hung, deposed from the presidency of China by the militarists in 1917, is invited to resume that office by the members of the cabinet of Hsu Shih-chang, resigned, and threats are made to oust President Sun Yat Sen, of the Republic of South China, if he opposes unification of China.

June 4.—British troops under Ulster command lay down an artillery barrage on Pettigo on the Ulster side of the Donegal-Furmanagh border, and drive out the Sinn Féiners.

Major-General Henry T. Allen, in command of American troops on the Rhine, is notified that 1,200 officers and men will be retained there indefinitely.

June 5.—An American steamship, the *Seattle Spirit*, is held up by a British sloop in Irish waters because of the alleged discovery of munitions secreted in her hold.

Michael Collins and Eamon De Valera issue a joint statement declaring, in effect, that they will stand by their pact as the best means of obtaining an orderly election.

The Portuguese naval aviators, Captains Saadoura and Coutinho, reach Per-

CURRENT EVENTS

Continued

nambuco, Brazil, in completion of their transatlantic flight from Lisbon. Three planes were used in the flight, which was begun early in April.

June 6.—Dr Sun Yat Sen, President of the Republic of South China, will refuse to resign to clear the way for General Wu Pei-Fu's plan to reunite China under one government, according to advices received from Canton.

DOMESTIC

May 31.—The Senate Finance Committee, by a vote of 9 to 4, orders the McCumber bonus bill reported to the Senate.

Investigation of the so-called war fraud cases begin before a special Federal grand jury in Washington, when allegations involving the disposal of surplus lumber are presented against the Quartermaster Corps of the United States Army.

June 1.—The House rules committee votes down by 7 to 4 the Woodruff-Johnson resolution to investigate alleged laxity in war fraud prosecution.

An organization to be known as "the permanent conference for the abolition of child labor" is formed in Washington by representatives of a number of national associations, with Samuel Gompers as permanent chairman.

June 2.—A race riot near Kirvin, Texas, results in the death of one white man and six negroes.

The annual Army appropriation bill fixing the size of the Army at an average of 12,530 officers and 133,000 men, and carrying an appropriation of \$341,750,000 is passed by the Senate. The measure now goes to conference with the House.

June 3.—Secretary Hughes accepts for the Government Great Britain's invitation to join with the British, French and Italian Governments in an investigation into alleged Turkish cruelties against Christians in Asia Minor.

June 4.—Boris Bakhmeteff, ambassador to this country for the Kerensky Government in Russia, extinct for five years, will end his relations with this Government on June 30. The work of the embassy will be carried on by an attaché of the staff.

June 5.—The Federal Trade Commission begins proceedings to test the legality of the proposed Bethlehem-Lackawanna steel merger.

The United States Supreme Court hands down a decision that labor organizations, generally, are liable to be sued and to judgment for damages in case of injury to property in the course of strikes, and that strike funds may be levied on to collect judgment.

Lillian Russell Moore dies at her home in Pittsburgh in her 62nd year.

June 6.—Officials of eleven railway unions, including the Railway Employees' Department of the American Federation of Labor, authorize a nation-wide strike vote, returnable on June 30. The strike will affect 1,200,000 men.

Wages of 400,000 railroad employees, including shopmen, freight-car men, helpers and car-cleaners, are cut approximately \$60,000,000, by the majority members of the United States Railroad Labor Board, the decisions bringing the total wage savings for the railroads to approximately \$110,000,000.

Pacific Coast Representative Phil. B. Bekeart Co. 717 Market St., San Francisco, Cal.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. L. B.," Piqua, O.—"What is meant by the term *grass-widow*, and where or how did it originate?"

Grass-widow is a common term of disparagement applied to a woman abandoned or separated from her husband: a term which is not used by persons of refinement and one that, if used at all, should be applied only with great care. The etymological notion of the term is obscure.

"A. T. K.," Mt. Hope, Va.—"(1) Kindly give me the correct pronunciation of the words *yeast* and *vaudeville*. (2) Is the word *kid* for a child a respectful term or one used by people of refinement?"

(1) The word *yeast* is pronounced *yist*—*y* as in *yet*, *i* as in *police*; *vaudeville*, *vod'vil*—*o* as in *go*, *i* as in *hut*; or French, *vod'vil*—*o* as in *go*, *i* as in *police*. (2) *Kid* is a common vulgarity for "child," and as such can not be too severely condemned.

"H. M. G.," Belvidere, Ill.—"Which of the following forms is correct: 1. Was his question, 'Are we going?' 2. Was his question, 'Are we going?' 3. Was his question, 'Are we going?'"

The sentence should be punctuated—Was his question, "Are we going?" or "Was his question, 'Are we going?'" See *Punctuation and Capitalization*, p. 70.

"A. L. E.," Reading, Pa.—"Can you give the source and full text from which comes the expression, 'Birds of a feather flock together?'"

"Birds of a feather flock together," is an English proverb. Burton (1576-1640) in his "Anatomy of Melancholy," part iii, sect. 1, mem. 1, subsect. 2, made use of "Birds of a feather will gather together."

"S. J. B.," Boligee, Ala.—"Please give me the correct pronunciation of the term *Yosemite*."

The correct pronunciation is *yo-sem'i-ti*—*o* as in *obey*, *e* as in *get*, first *i* as in *habit*, second *i* as in *police*.

"J. A. D.," Big Rapids, Mich.—"Please define and explain the difference between *vanity*, *pride*, *conceit*, and *disdain*."

"*Haughtiness* thinks highly of itself and poorly of others. *Arrogance* claims much for itself and concedes little to others. *Pride* is an absorbing sense of one's own greatness; *haughtiness* feels one's own superiority to others; *disdain* sees contemptuously the inferiority of others to oneself. *Presumption* claims place or privilege above one's right; *pride* deems nothing too high. *Insolence* is open and rude expression of contempt and hostility, generally from an inferior to a superior, as from a servant to a master or mistress. In the presence of superiors overweening *pride* manifests itself in *presumption* or *insolence*; in the presence of inferiors, or those supposed to be inferior, *pride* manifests itself by *arrogance*, *disdain*, *haughtiness*, *superciliousness*, or in either case often by cold reserve. *Pride* is too self-satisfied to care for praise; *vanity* intensely craves admiration and applause. *Superciliousness*, as if by the uplifted eyebrow, as its etymology suggests (*L. supercilium*, eyebrow, from *super*, over, and *cilium*, eyelid), silently manifests mingled *haughtiness* and *disdain*. *Assumption* quietly takes for granted superiority and privilege which others would be slow to concede. *Conceit* and *vanity* are associated with weakness, *pride* with strength. *Conceit* may be founded upon nothing; *pride* is founded upon something that one is, or has, or has done; *vanity*, too, is commonly founded on something real, tho' far slighter than would afford foundation for *pride*. *Vanity* is eager for admiration and praise, is elated if they are rendered, and pained if they are withheld, and seeks them; *pride* could never solicit admiration or praise. *Conceit* is somewhat stronger than *self-conceit*. *Self-conceit* is ridiculous; *conceit* is offensive. *Self-respect* is a thoroughly worthy feeling; *self-esteem* is a more generous estimate of one's own character and abilities than the rest of the world are ready to allow. *Vainglory* is more pompous and boastful than *vanity*."—Fernald's *English Synonyms, Antonyms, and Prepositions*.

McLean units can be used alone, or aligned with other cases in a continuous display. One unit at a time is a good way to buy. Pay for units on our divided payment plan and save your cash for discounting bills.

Display is a Persuasive Salesman

The McLean Unit Idea

No. 1340—UPPER DISPLAY UNIT—rests on the base.

No. 1200—BASE UNIT—a complete showcase.

COMBINATION OF BASE AND UPPER DISPLAY UNITS, each unit 6 feet long. Add new units at either end. Both ends finished.

CONVINCE the eye and you make a sale. That holds true in 85 sales out of every 100, especially in selling novelties, toilet articles, confectionery, stationery, electrical specialties, food products and smokers' supplies.

Behind the frameless plate glass doors of a McLean showcase, attractive merchandise takes on added brilliancy and sparkle. The birch-mahogany woodwork furnishes a rich contrast. It is surprisingly easy to set up a tempting display quickly in McLean Units. Sales move rapidly, because the buyer sees what she wants, points it out, and the salesman removes the article for wrapping, all in a few seconds.

Our catalog describes and illustrates all the McLean unit fixtures for every part of your store. Shows how easy these units are to set up without skilled help. Explains in full detail how you can improve your store one unit at a time, without crippling your bank account. Divided payments can be arranged, if desired.

This catalog will interest you whether you are interested in new fixtures immediately or not. Write for it.

THE ▽ SPICE ▽ OF ▽ LIFE

Travel Stimulants.—A prize has been offered for a slogan that will stimulate travel. In the meantime, the Eighteenth Amendment seems to be doing pretty well.—*Life*.

The Car Ahead.—"John, you've promised and promised to get me a runabout."
"I will, my dear, one of those days."

"Humph! Your present is always in the future."—*Boston Transcript*.

A Relic.—SHE—"What is this dark hair doing on your coat?"

HE—"That is the suit I wore last year. I expect the hair has been on it ever since you were a brunette, dearest."—*Judge*.

A Pair of Suspenders.—HE—"Why not give me your reply now? It is not fair to keep me in suspense."

SHE—"But think of the time you have kept me in suspense."—*Boston Transcript*.

A Limited Enlightener.—"I speak it's a lucky thing," said Uncle Eben, "dat de world doesn't have to depend interely foh its inlightenment on whut Congress done foun' out in 'vestigations.'"—*Washington Star*.

His Choice.—ENGLISH PROFESSOR—"Jones, why are you not prepared?"

JONES—"I am prepared; you said, 'Read 'Twelfth Night or What You Will,' so I read 'The Beautiful and Damned.'"—*Princeton Tiger*.

The Easiest Way.—"Now, Victor, what does a clever, nice little boy do when he is in a full tramcar and sees an old lady who has to stand up?"

"He pretends he is asleep!"—*Sondags Nisse (Stockholm)*.

Famine Threatened.—"I've had a hard day at the office, dear, and I'm hungry as a bear. Is dinner ready?"

"No, love, I'm afraid we'll have to go to a restaurant to-night. I've broken the can-opener."—*Judge*.

The Remaining Danger.—"Are you going any farther West?"

"I planned to," said the foreign visitor. "Is there any danger from Indians?"

"Not if you keep out of the way of their motor cars."—*Birmingham Age-Herald*.

A Chance to Boost.—"What is your object in telling people you think of retiring from public life?"

"I consider it desirable," replied Senator Sorghum, "to offer the suggestion so that my friends can show how difficult it would be for the nation to get on without me."—*Washington Star*.

Seeds in Doubt.—Having helped his mother plant the seeds and place at the end of each row the pictured envelopes showing here a radish, there a beet and so on, little Edwin was quite distressed when he went out next day and found that the rainstorm had washed the envelopes off into the mud.

"Never mind, dear," comforted his mother, "it doesn't really matter."

"But, mamma," said the child greatly worried, "how will the little seeds know what to be when they come up?"—*Boston Transcript*.

No Ghouls Wanted.—EDITOR (after surfeit of old jokes)—"M—m—, Yes. But I would like to meet a humorist who is not an exhumist."—*London Mail*.

Revised Version.—Jack Sprat could eat no fat; his wife could eat no lean. You see they spent their money for the jitney's gasoline.—*Republican (Fresno, Cal.)*.

Cards and the Man.—Looking after husband is like playing a game of cards. You must play with what is dealt you, and the glory consists not so much in the winning as in playing a poor hand well.—*London Opinion*.

Lost Opportunities.—General Pershing has declared before the Senate Military Committee that, if the United States had been prepared, they could have averted the late War. It is, of course, too late now to avert the present Peace.—*Punch (London)*.

Lucky Lines.—MISS BUTE—"As I am playing an old lady in the piece, I shall have to have wrinkles painted round my eyes and mouth."

MR. BLARNEY—"Ah, they will indeed be lines cast in pleasant places."—*Boston Transcript*.

Right.—The teacher was trying to impress upon her pupils the importance of doing right at all times, and to bring out the answer, "Bad habits," she inquired, "What is it that we find so easy to get into and so hard to get out of?"

There was silence for a moment and then one little fellow answered, "Bed."—*Boston Transcript*.

The Wandering Sheep.—THE PASTOR (driving to church, to passer-by)—"Where are you going, John?"

JOHN—"To church in the next parish."

PASTOR—"I don't like that. What would you say if your sheep strayed to some one else's property?"

JOHN—"Well, s'far as that goes, wouldn't say nothin' if the pasturage was better."—*Kasper (Stockholm)*.

A Pattern for Husbands.—"Young women nowadays," remarks an ornithologist in the employ of the Government, "take too light a view of marriage. While in the West last summer I was induced to lecture to a summer school. During the course of this lecture I chanced to remark, 'The ostrich sees very little; on the other hand, it digests everything.'"

"Whereupon a girl on the front bench exclaimed, sotto voce, to her neighbor, 'Gee! What an ideal husband an ostrich must make!' "—*Harper's Magazine*.

Poor Kitty!—Four-year-old Bobby was stroking his cat before the fireplace in perfect content. The cat, also happy, began to purr loudly. Bobby gazed at her askance for a while, then suddenly seized her by the tail and dragged her roughly away from the hearth. His mother intervened.

"You must not hurt your kitty, Bobby."

"I'm not," said Bobby, protestingly, "but I've got to get her away from the fire. She's beginning to boil."—*The Argonaut (San Francisco)*.

A 1922 switchboard, built of millions of finely adjusted parts. To plan, make and install such a board sometimes takes two years.

The switchboard of 1878

Setting the stage where a whole town gets together

That busy meeting-place of voices, your telephone switchboard, has a manufacturing story not often considered.

Some idea of the problem can be had from the very size of the boards pictured above—the one of today connecting five thousand subscribers for every dozen served by the crude affair of forty-odd years ago.

And greater size brought greater

complexity. The modern switchboard houses a network of wires measured by the mile and is made up of parts measured to the thousandth of an inch for accuracy.

That the switchboard can meet the demands of your service is largely because the Western Electric Company, which makes it, began building boards in 1878, and since has led the way in every important development in the art.

Western Electric
Since 1869 Makers of Electrical Equipment

PACKARD TRUCKS

In thousands of instances where only one truck is required, the Packard has been installed, as the sounder and safer investment. This is quite as gratifying to us as the great fleets of Packard Trucks which large corporations have purchased after comparative tests.

The latter case proves that Packard Trucks deserve a good name; but the

case of the individual owner proves that Packard Trucks have won, and hold, the good will and the confidence of business men everywhere.

The fact is, that practically all know that Packard Trucks give lower-cost service, and more years of hauling; and that they cost less to buy than any other trucks that may be likened to them in quality.

Packard Trucks range in capacity from 2 tons to 7½ tons; and in price from \$3,100 to \$4,500

In 585 cities and towns throughout the United States, Packard Truck Service Stations give owners highly skilled service at a reasonable cost. Packard Truck costs, always low because the sound Packard construction minimizes the need of repair, are held still lower by this expert, broadcast service.

Ask the man who owns one.

The trademark of the
Hartford Fire Insurance
Co. Engraved by
TIMOTHY COLE

THIS is the trademark of the Hartford Fire Insurance Company. It is a means of identifying dependable insurance.

Back of it is a century-old company which has never failed to pay an honest loss. Through one hundred and twelve years the Hartford's integrity and financial stability have been unquestioned. Progressiveness is the keynote of the Hartford's business practices.

Hartford policy-holders command the services of a country-wide organization of capable agents as well as the gratuitous co-operation of a corps of Fire Prevention Engineers, trained in recognizing and removing the possible causes of fire.

Dependable fire insurance and fire prevention can be secured through any Hartford agent. If you are not acquainted with one in your locality, write directly to the company.

To Stop Strikes and Lockouts

The enormous losses in wages and production caused by industrial strikes and lockouts, and the highly approved remedy suggested for ending the antagonism of Capital and Labor are clearly detailed in that remarkable new book—

THE INDUSTRIAL CODE

By W. Jett Lauck and Claude S. Watts, both of whom served with distinction on the National War Labor Board. The authors ably point the way to the first real constructive step in settling labor troubles by the establishment of an industrial code. *The idea has been advocated by President Harding in a message to Congress* and the industrial readjustment in the near future will unquestionably revolve around the matters that are so sensibly and thoroughly discussed in this book. You will find it 576 pages intensely interesting, as well as enlightening.

Cloth \$4, net; \$4.12, postpaid.

Funk & Wagnalls Company, Pub's, 354-360 Fourth Ave., New York.

PUNCTUATION AND CAPITALIZATION

By FRANK H. VIZETELLY, Litt.D., LL.D.

Tells you how to use the comma, the semi-colon, the colon, the period. Quotes rules for compounding English words. Gives list of words that should be capitalized. Describes forms of address in writing letters to distinguished persons. A modern reference book for everybody.

Size 6¼ in. long; 3½ in. wide. Cloth. 35 cents, postpaid

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York, N.Y.

KIMBALL UNION ACADEMY, a high grade Congregational preparatory school with a moderate tuition. 110th year, opens Sept. 13th. High elevation. Eight buildings. 100 acres. Farm. Separate dormitories for girls and boys. New Gymnasium. Playing fields. Outing club for winter sports. Address
Charles Alden Tracy, Headmaster, Meriden, N. H.

EAT AND BE WELL

A condensed set of health rules—many of which may be easily followed right in your own home, or while traveling. You will find in this little book a wealth of information about food elements and their relation to physical welfare; also effective weight control diets, acid and bland diets, laxative and blood-building diets, and diets used in the correction of various chronic maladies.

The book is for FREE circulation. Not a mail order advertisement. Name and address on card will bring it without cost or obligation.

Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

Edward Wesley and Co., Cincinnati, O.

Lest Memory Dim

Give this expressive art lamp its natural place of honor in every American home. Diffusing a soft, mellow glow of peacefulness it fittingly symbolizes the grateful after-peace of hard won victory.

A Distinctive and Practical Lamp for your Library, Den or Living Room.

'The Spirit of the AMERICAN DOUGHBOY ART LAMP'

The charmingly distinctive embodiment of American Patriotism in Art—an adornment of eternal appeal combining artistry, utility and inspiration.

Statuette base endorsed by the National Memorial Committee of the American Legion.

Beautiful statuary bronze finish with attractive parchment shade (Flanders poppy design as shown) or rich blue, rose or gold silk shade—a lamp in which you will feel a lasting pride of ownership—delivered postpaid on payment of only \$2.50.

Tear coupon and mail with \$2.50
THE AMERICAN DOUGHBOY
Direct Mail Division
Americus, Georgia

The American Doughboy, Americus, Georgia.

I enclose \$2.50. Send me postpaid one American Doughboy Art Lamp. I agree to send \$2 each month until \$13.50 in all has been paid. (If all cash is sent with order, remit only \$12.50.)

Style of shade ☐ Parchment ☐ Silk

Color of shade ☐ Blue ☐ Rose ☐ Gold

The Literary Digest School and College Directory

THE GATES OF THE FUTURE
STAND WIDE OPEN

FOR INSTITUTIONS WHICH BUILD CHARACTER THROUGH EDUCATION AND TRAIN FOR RESPONSIBILITIES OF LIFE THE NEED IS EVER GREAT

LITERARY DIGEST readers seeking private institutions of learning will find in our pages between May 13th and September 9th, the following Classified Directory containing the names and addresses of some distinctive residential schools; vocational, professional, special schools; colleges, and supervised camps. Advertisements describing these institutions will be found in the first issue of each month from May to September.

You are invited to write for information to any of the institutions in which you are interested. We list only such schools as we believe are under highly trained and public-spirited executives. Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary for inquirers to give specific information that may aid us in giving prompt service.

Schools for Girls and Colleges for Women

Crescent College.....Box L, Eureka Springs Ark.
The Marlborough School.....5041 West Third St., Los Angeles, Calif.
The Ely School.....Ely Court, Greenwich, Conn.

WILL THE TARIFF INCREASE THE COST OF LIVING?

A PROFIT OF MORE THAN 2,000 PER CENT. is credited, not to any get-rich-quick scheme, but to the American retailers of certain German-made goods. A cuckoo clock which costs 94 cents to make in Germany sells here at retail for \$22. A beaded bag which sells in the United States for \$15 is made in Germany at a cost of 10 cents. Kitchen knives made abroad for 2¾ cents retail here for 30 cents. Foreign watches manufactured for \$12.20 a dozen, sell here for \$65 a dozen. Gloves made in Europe for 27½ cents retail here for \$2. The authority for these startling figures is Senator McCumber (Rep.) of North Dakota, chairman of the Finance Committee and sponsor of the Senate's Tariff Bill. The lesson that he wishes then to impress upon his Senatorial colleagues and the nation at large, explains a Washington correspondent of the *New York Tribune*, is that "the consumers of America are being unconscionably robbed by the importers" and that "the remedy is to pass the pending tariff bill." To drive the lesson home he exhibited in the Senate samples of these and other products of cheap foreign labor.

A similar "tariff show" was staged in New York a few days earlier by Senator Calder (Rep.) for the benefit of the Woman's Republican Club. Among the exhibits laid before the ladies by the New York Senator were: a string of amber beads, sold by the German manufacturer for 62 cents, and retailed in New York stores for \$12.50; a mahogany clock bought wholesale in Germany for \$2.40, and retailed here for \$68; and an electric iron which "has a foreign list price of 59 cents, and is sold in Brooklyn for \$6.50." "In the peace-time profiteering of to-day," declared Senator Calder, "the importing interests which are seeking to delay tariff legislation make war profiteering fade into insignificance." He pointed to his foreign exhibits to prove that "a higher tariff does not mean higher prices." On the contrary, he argued, "through the tariff we will regain the American wage, and in the end we can reduce the price through our own manufacturers."

The Protectionist, published in Boston by the Home Market Club, tells us that "German exporters are not happy over the proposed American tariff." It cites the case of one German firm that exported more than 1,000,000 thermos bottles to the United States last year and which claims to be able to sell these bottles here for 50 cents and make a profit. Coupled with this information is the statement that "the largest thermos bottle manufactory in this country has completely shut down owing to its inability to make a thermos bottle at factory cost as cheaply

as the German thermos bottles are sold in the retail stores of the United States."

The filibustering tactics by which Democratic Senators are delaying tariff legislation, Senator Lodge recently averred, are "simply postponing the arrival of a period of business stability." Already, under the Emergency Tariff, the Massachusetts Senator pointed out, "business is beginning to improve." Passage of the pending tariff bill, he argues, will stimulate and encourage this improvement. Denying that the proposed rates will kill our foreign trade, he went on to say:

"Our foreign trade to-day is not suffering because of the tariff, and we are living now under the Emergency Tariff Act, which has higher rates, in many cases, than those proposed in the Finance Committee Bill. The Democrats seek to give the impression that the increase in our foreign trade and in trade conditions throughout the country are due to the Underwood Tariff Act, whereas the figures quoted by Secretary Hoover show increases in foreign trade which have developed since the Emergency Tariff Bill became a law. . . .

"Under the Emergency Tariff, our trade is becoming more nearly normal than that of any other nation. After the present tariff bill becomes a law there will be an even greater advance

in our trade, both foreign and domestic.

"Building up the business of this country is not going to depress the business of the world. Other countries have high duties now, as the figures presented by Senator Gooding show. I think I am right in saying that in many cases their duties are higher than ours, and yet those who oppose this bill seem to think that these duties will stop the trade of other countries with us.

"It is upon the protective principle that the great prosperity of this country has been built. We are obliged to-day to meet an economic situation such as the world has never seen, owing to the utterly distorted and dislocated conditions of exchange. In the midst of these fluctuations we must determine what duties are sufficient to protect American industries and agriculture. Under normal conditions, when values and costs of production were practically fixed or easily determined, the rates were not as high as those necessary to-day. But now with the shifting of values and costs abroad, which are admittedly abnormally low, duties must be higher than has been customary in the past."

To the oft-repeated charge that the high rates of the pending tariff bill will force up prices and greatly increase the cost of living *The National Republican*, a party weekly in Washington, replies vigorously:

"We have had during the past nine years the lowest tariff in American history, enacted on the pledge that it would smash monopolies, stop profiteering and end the high cost of living.

NOT "SENTENCED TO DIE"

It will deeply gratify the thousands of our readers who sent prompt and generous contributions to save the Armenian children, to know that their gifts reversed the decision of the Near East Relief to cut down appropriations, and saved the lives of tens of thousands of children who had reluctantly been "sentenced to die," as our headline told, through failure of funds. The sentence was commuted. "One check came for \$100,000, from a donor who read in THE LITERARY DIGEST of the threatened slaughter of innocents, and responded promptly, generously. This man, by signing that check, literally saved the lives of 2,000 orphaned children as truly as if he had rescued them from a sinking ship or burning building." And every other gift, in its degree, merits the same praise.

Under that lowest tariff in our history we have had the highest prices, the most profiteering and the most outrageous exploitation by monopoly in any one period in our national history.

"How it is, in the face of this record, the foes of protection have the unadulterated gall to stand up in all seriousness and shriek against the restoration of the protective policy on the ground that it will create the very evils the present low tariff law has developed to a point undreamed of heretofore, is a mystery beyond fathoming!

"The present low tariff has destroyed employment for millions of Americans, but it has not reduced the price of any commodity a nickel to any ultimate consumer in this country. Profiteering is the result of distributive, not productive, processes. If every article consumed in the United States were produced abroad, it would be far easier than at present for distributive organizations

believe that by this tariff bill we will help to keep the industries of the United States of America in operation, and I do not believe, no matter how vicious the assaults may be, that we are going to surrender the interests of the producing nine-tenths of the American people for the interests of the importing one-tenth."

But when we turn from the champions of the Senate's tariff bill to its foes we find the latter numerous and aggressive, and apparently well supplied with ammunition. Nor do the attacks come only from Democratic and Independent quarters. "There seems to be little or no sentiment for the pending tariff bill except such as comes from the specific business interests which hope to profit financially by it," says the Republican *Ohio State Journal* (Columbus); and Mr. Munsey's New York *Herald*, which declares itself "a consistent and steadfast advocate of the American tariff system," finds it necessary to warn the Senate that it "can not stand for damn-fool protectionism." "No tariff bill ever raised so many enemies, even in its own household," says the Democratic New York *Times*; and Senator McCumber himself admits that the city press, regardless of party affiliations, is turning cold and critical eyes upon his tariff measure. In explanation of this fact the North Dakota Senator says that—

"The policies of practically all of the great metropolitan papers of the country are governed by the counting-rooms. If the great department stores do not own stock in the great metropolitan press of the country, they are their customers, and, through the advertising medium, control the policy of those papers. . . .

"Every one of these great department establishments is an importer. I would to heaven that the American consumer could compare the price which these stores pay for the things which they import with the price they charge the consumer."

Democratic Senators, on the other hand, argue that if our retailers are making such exorbitant profits on imported goods, it is a case for the attention of the Department of Justice rather than the tariff makers. Senator Underwood (Dem.), of Alabama, author of the Underwood Tariff and leader of the Senate minority, denounces the pending tariff bill as "the worst in the history of the country." In a signed article in the New York *Times*, he says:

"It looks as if those charged with the responsibility of writing the bill have accepted unqualifiedly the rates proposed by the special interests desiring protection, and have not given consideration to the resultant effect on the general business of the country or the burdens that must be borne by the consumers of America. Should the bill become a law, the American people will find this out in time, but it will be after they have paid the price of the experiment."

Discussing the support of the tariff bill by the "farm bloc," Senator Underwood continues:

"In my opinion, if it were not for the support given this bill by Senators who represent agricultural constituencies it would be impossible to pass it through the Senate. The argument is advanced that since taxes are to be levied on manufactured products, taxes should also be levied on agricultural products, and that if the people are to be penalized for the benefit of the manufacturer they should likewise be penalized for the benefit of the farmer. Where the fallacy of this argument comes is that under the guise of doing something to help the farmer in some particular item, their support is asked for a bill that as a whole means that for every dollar the farmers may derive from the bill they will pay \$100 in taxes for the benefit of somebody else. In other words, for every 1 per cent. of protection they are given they pay 99 per cent. of protection for the benefit of other people.

"Take the wool schedule, known as Schedule K in the Payne-Aldrich Bill, but having a number in the bill that is now before the Senate. If the tax proposed in the bill is levied the farmer will have to pay the tax the same as does the man who lives in the city, the man who works in the store, the machine-shop, the foundry or in an office. If the analysis be worked out it will be demonstrated that the tax of 33 per cent. on scoured wool will cost the public nearly \$200,000,000, of which those engaged in the growing of wool will receive something like \$72,000,000, against which the farmers as a whole will pay about \$99,000,000,

PROTECTION.

—Fitzpatrick in the St. Louis Post-Dispatch.

to use the same methods now employed to hoist prices beyond a proper level to the consumer. All that is accomplished by free trade is to enable the profiteer to buy more cheaply abroad than at home, and lengthen the gap to his own enrichment, between cost and sale price. Neither the ultimate consumer nor the non-importing retailer get any advantage out of such an arrangement. But the American producer is deprived of the income derived from the growing or making of the article bought abroad.

"Never in all the history of this country has a more shamelessly mendacious and hypocritical propaganda been carried on than that now being waged against the enactment of a protective tariff law. No misrepresentation is too extreme, no sophistry is too flimsy to be used by the theoretical free traders and the more practical propagandists operating in behalf of the importers and international money-lenders, ready to sacrifice the American producer to the greed and disloyalty to America of grasping special interests. . . .

"The enemies of the protective policy are making their last stand, and are fighting with desperation. They are hoping to prevent the passage of any tariff bill at the present session, or to delay the passage of the bill so long that there will be no time for price statistics to give the lie to their claims as to the effect of the tariff on retail prices."

"Failure to pass a tariff law at this session, or further unreasonable delay in effecting such legislation," declares another issue of the same organ, "will be disastrous both to the Republican party and to the country." Senator McCumber, in a speech before the Senate, recently pointed out that "90 per cent. of the products consumed in the United States are produced in the United States." And he went on to say:

"We want to continue to produce them in this country. We

"HERE, PET, BE CAREFUL NOT TO HURT ANYBODY."

—Harding in the *Brooklyn Eagle*.

SECOND GROWTH!

—Thiele in the *Sioux City Tribune*.

THE SEAMY SIDE OF THE TARIFF, AS SEEN BY ITS CRITICS.

the rest of the people will pay in proportion, while the Government will receive as its share of this enormous tax less than \$20,000,000. Yet it is contended that this duty on wool will help the American farmers. I admit it will help the men whose business is raising sheep, but the other farmers of the country, those who do not grow wool but raise wheat and corn and cotton, will pay the bill—that is, a most substantial part of it—and for every wool-grower there are a thousand farmers who do not raise sheep. I do not have in mind the little farmer who raises cotton or wheat and has a few sheep on the side, but the men whose business is growing sheep and who are only a few in number when compared with the great mass of farmers who will pay so large a proportion of the tax proposed in the pending measure."

The McCumber Tariff Bill, writes Elliott Thurston in the *New York World*, will impose upon the American consumer a burden "equal to the present United States taxes." "In all the country's stormy history of tariff-making since 1816 no measure ever before proposed for passage was so loaded with burdens for the public," says Mr. Thurston. Here are some of the specific points in his indictment against it:

"The high cost of living, which has been reduced so slowly and laboriously, will jump again. An insurmountable tariff wall will be erected, behind which war prices could be charged for food, all sorts of clothing, shoes, housing and other necessities of life without danger of competition.

"An 'invisible tax' estimated by experts for the Senate minority to equal, if not exceed, the income and all other Federal taxes now imposed, would be wrung from the public under this bill. The bulk of the proceeds would be handed over to the favored beneficiaries under the proposed rates, enabling them to pay dividends on inflated capitalization. . . .

"Under the dictation of superlobbyists the rates of the bill have been jacked up an average of 50 per cent. above the levels of the Payne-Aldrich tariff—the highest heretofore—which caused a revolt in this country.

"Importations would be placed under a virtual embargo, thereby blocking Europe's only means of paying off her war debt of more than \$11,000,000,000 to the United States. The economically unhealthy gold surplus would remain in this country—over 40 per cent. of the world's gold supply is now in Federal Reserve Bank vaults—instead of flowing back to normal channels and thus stabilizing exchanges.

"Unemployment and depression will result in those lines of business and industry which depend upon selling their surpluses abroad. Foreign markets will be closed to America when foreign goods are excluded from this country. Europe can not buy of America except through the process of exchanging merchandise.

"Notices of price increases, in anticipation of the passage of the

Fordney-McCumber Bill, have already been issued to dealers by several of the chief industrial favorites of the bill. These are industries exerting a control of domestic markets amounting to monopoly."

This "super-tariff," declares the *New York Evening World*, will impose "a new burden of more than \$800,000,000 upon the American people." Under this measure, says a Washington correspondent of the *New York Evening Post* "the consumer is taxed from hat to shoes." In the *New York Globe* we read:

"The tariff, in short, is being written for persons with something to sell, not for those with something to buy. It is a treaty among the manufacturers of the several states by which they join forces against the consumers. If it passes it will be because each community is willing to sell a general advantage in order to gain a special privilege. This fact is as plain as day in every debate."

Another independent paper, the *Springfield Republican*, notes that "the Republicans themselves are destitute of enthusiasm for this bill"; and it goes on to say:

"This tariff would need to be drastically revised within a year because of the unstabilized rates of exchange and the chaotic condition of European industry. Of sound economic reasons, there are few indeed to warrant the legislation. Politics may seem to require the party in power to put through a new tariff in order to redeem a campaign pledge, yet even politics is a gamble in a situation like this."

The *St. Louis Trades Council and Labor News* calls upon workmen to protest to their Congressmen against the Fordney-McCumber bill on the ground that "it will make many American workmen lose their jobs." Says this labor organ:

"If our imports are cut down, foreign nations can not afford to pay for our exports. President Harding has said that if we do not buy from abroad, we can not sell abroad. That is common sense. The Fordney-McCumber Tariff Bill, which trebles some of the present tariff taxes and increases almost all of them, is intended to stop imports into this country. If so, it will decrease exports and labor will pay for this in lessened wages and in unemployment."

It is "one of the most gigantic conspiracies of plunder in recent American history," declares *The Post-Dispatch*, of the same city, which adds ominously: "This tariff, like the great war, is one of those hurricanes of adversity whose coming is not regarded seriously because 'it is too unbelievable.'"

A NEW "IOWA IDEA"

IT WAS THE OLD "IOWA IDEA" of twenty years ago that eventually developed into Republican insurgency, the crushing of "Cannonism," the defeat of Taft and the brief, hectic career of the Bull Moose. Now comes another Iowa idea, and the papers are wondering what it will lead to. This young idea from Iowa, it might be remarked, is likely to hit something as it is being taught to shoot by a veteran of two wars, an expert rifleman and instructor in marksmanship. When Colonel Smith W. Brookhart carried the Iowa Republican Senatorial primary against five competitors, and in spite of the opposition of the party organization, people began to ask what "Iowa idea" was back of it all and whether it might not be the same idea that led Indiana Republicans to prefer Beveridge and Pennsylvanians to pick Pinchot.

Turning to the Iowa press as the best source of light on this point, we note the *Des Moines Register's* (Rep.) remark that "nobody can deny that the successive victories of Pinchot and Brookhart, not to mention Beveridge, point to a dissatisfaction with government by and for conservatives." "With reverses coming in rapid succession in Indiana, Pennsylvania and Iowa and with other upsets apparently inevitable, the saddle riders at Washington must be convinced," so the *Cedar Rapids Gazette* puts it, "that the plodding old elephant has gone loco." This independent daily sees absolutely no doubt that "Iowa voters demand an about-face at Washington." Brookhart's "clean-cut victory," says the Socialist *Davenport Tribune*, has struck terror in the hearts of the reactionaries; "the producers of the country both in factory and farm are going into politics with a vengeance, with a grim determination to exterminate reaction, root and branch." The *Webster City Freeman-Journal* (Rep.) agrees that Colonel Brookhart's election is a warning to the reactionaries in Washington. And as the *Ottumwa News* sees it, "thousands of Republican farmers and laboring men insist on a new deal and are expecting it from a man who is not in alinement with the State administration and nationally influenced groups." This Democratic Iowa paper considers the result a sign that the Republican party is "being regenerated, given a new baptism in the faith that reaches back to the homes of the country, the cottage of the workingman, to the producers and wage-earners."

The farmers voted for the Colonel, says the *Des Moines Capital* (Rep.); and one of their main ideas was "the desire to show the moneyed man on Wall Street that the farmer has a mind of his own and that the Wall Street people had not been fooling anybody." The *Fort Dodge Messenger* (Ind.) characterizes the Brookhart vote as "a vote of protest from the farms against low prices of farm products and high prices of farm labor; and from the cities it was a protest against high living costs and low wages." According to the *Burlington Hawkeye*, the support of union labor was a very considerable element in Brookhart's success. In view

of the recent talk about the high cost of primary campaigns this Republican daily incidentally calls attention to the fact that "Colonel Brookhart's campaign expenses were less than \$500." Several Iowa Republican papers, such as the *Davenport Times*, *Cedar Rapids Republican*, and *Ottumwa Courier*, claim that Brookhart was nominated largely by Democrats who voted in the Republican primary. Other Republican papers assert that all factions of the party will get behind Brookhart in November, and there are papers of both parties which suggest that Senator Brookhart is likely to be less radical than candidate Brookhart.

The Republican candidate for Senator from Iowa is, as the Washington correspondents remind us, a veteran of both the late and the Spanish-American War. He is an expert marksman, a rifle club enthusiast and an instructor in marksmanship who gave valuable advice on the subject of rifle practise to Secretary of War Baker. He is a "dirt farmer" who, according to the *Des Moines Capital* in his own State, "never tasted liquor in his life and never smoked tobacco."

Colonel Brookhart says that if elected he will do his "best to give the people of Iowa the same kind of service which they have received in the past from such forward-looking men as Dolliver and Kenyon." The Colonel came very near defeating Cummins for the Senatorial nomination in 1920, and when he entered the ring this year "every organized body of Republicans sought the scalp of the newcomer," as the *Baltimore Sun's* (Ind. Dem.) Washington correspondent puts it. Further light on the new Iowa idea is thrown by *The Sun* as follows:

"The fight upon Brookhart was the more violent because his platform was in conflict with almost every important policy of the Administration. For example, he stood squarely against the sales tax, but stood out from first to last for the soldier bonus. He opposed

the repeal of the excess profits tax. He demanded the repeal or a radical modification of the Esch-Cummins Act, and he swallowed almost whole the platform of the Labor and Farmer organizations. He denounced Newberryism in every county in the State."

So many newspapers, Republican, Democratic and independent, agree that the Iowa primaries strengthen the proof of progressive resurgence furnished by Indiana and Pennsylvania that this may be set down as a general editorial opinion of what the new Iowa idea really is. As the *Baltimore Sun*, for instance, remarks editorially:

"It is clearer than ever now, of course, that dissatisfaction and restlessness are wide-spread in the Republican ranks. It is a far cry in miles from Pennsylvania to Iowa, but the cry in both States sounds virtually the same note. There is a riot, if not a revolution, among the Republican masses against the spirit and the unsatisfactory showing of Harding leadership or of Harding non-leadership. The Republican verdict in all three States is a verdict of failure—a demand that the President shall take another route—shall move more aggressively along other political highways."

But if there is a revolt in the Republican Party, as indicated

A REAL "HAWKEYE."

Col. Smith W. Brookhart, who won the Republican nomination for United States Senator from the Hawkeye State, is a veteran of two wars, a crack shot with the rifle, a successful farmer and the father of six children.

"I'VE NEVER SEEN 'EM SO BAD!"

—Cassel in the *New York Evening World*.

THE OLD GUARD DYES BUT NEVER SURRENDERS.

—De Mar in the *Philadelphia Record*.

IT GOES TO THE HEAD: AS DEMOCRATS VIEW A REPUBLICAN PREDICAMENT.

by these successive Old Guard defeats, it does not, so the *New York Evening Post* (Ind.) argues, mean a real break or a party split. It is merely a "continuation of the struggle between two elements in the Republican party for the control of the party which began a decade ago, and the outcome of which has hardly been in doubt. The future of the Republican party is with the Progressives." Similarly to the *Providence Journal* it looks "as if the defeated reactionaries were prepared to accept the primary verdicts and help elect the triumphant progressives on the regular Republican ticket." And to another independent New England daily, the *New Haven Journal-Courier*, "events seem to be shaping for the control of the Republican machines by the Progressives as against the Old Guard."

The no rebuke of the Administration is discoverable by the *New York Tribune* (Rep.), that paper thinks "the President may derive instruction from the Iowa result":

"He is trying to play Shakespeare to a crowd that likes 'movie' stuff. He has been so anxious to keep strictly within his constitutional prerogatives as not to be sufficiently mindful, perhaps, of the claims of leadership. When he came to the White House the country was weary of being schoolmastered. But he put away not only the ferule of Wilson but the horn of Roosevelt.

"The country will not be displeased if the President becomes a trifle less modest. Congress, from its very size and the unescapable variety of the views of its members, needs a binder. No one except the President is competent to provide the needed cement. It seems time to roll up a few barrels. Such is the Iowa lesson.

"Because his course is sane is no reason why the President should not dramatize it to some extent and set it to the music of marching."

Iowa Republicans have now furnished the first significant test of farm sentiment in the Middle West, notes the independent *Springfield Republican*. Colonel Brookhart's attack on the guaranty provision of the Esch-Cummins Railroad Act "gave the farmers an opportunity to express not hostility to the railroads, but hostility to the present high freight rates," says the *New York Evening Post*, and "on transportation and financial questions, Colonel Brookhart's victory shows that rural opinion is well fixt."

DEMOCRATIC FUN WITH REPUBLICAN FUNDS

ALONG ABOUT KNEE-DEEP IN JUNE, in even-numbered years, almost everything that the party in power does is likely to be seized upon as campaign material by the party out of power and held up to the voters as a reason for reversing the rôles of the two parties in the November Congressional election. So it is that matters which seem of no earth-shaking importance to Republican papers are being dissected heatedly and at great length by Democratic editors and politicians. A few days ago a number of good Republicans met in Washington to lay plans for the coming campaign, and several of them agreed to help furnish the funds to get "before the people the real record of what has been done Congressionally since 1920." But while the Republicans thus seem to be in a fair way to get funds, the Democrats seem to be getting all the fun—at least for the present. Democratic editors lightly toss about such phrases as "Republican chiefs turn gold-diggers"; "frying the fat," "fat purse boys," "get the money," and "step on the gas." In the Senate the Hon. Pat Harrison of Mississippi livens up a tedious tariff debate by telling his colleagues that "those who were invited to this conference in order to make donations for the coming elections for Senators and for Congressmen on the Republican ticket were men representing J. P. Morgan & Company, men representing the great wholesale grocery interests of the country, men representing the chewing-gum interest of the country." As he went on to say in his speech, there was William Wrigley of chewing-gum fame, President Fred B. Patterson of the National Cash Register Company, B. H. Kroger, wholesale grocer, President Arthur B. Davis of the Aluminum Company of America, President Roy B. Chapin of the Hudson Motor Car Company, William H. Crocker, E. T. Stotesbury, Henry B. Wilcox, and other bankers, as well as Cabinet members and chiefs and ex-chiefs of the party organization. Mr. Harrison pointed out the next day, when it came his turn to break the monotony of a long discussion of bismuth, that the Republicans had just put a 25 per cent. tariff on cash registers

even tho Mr. Patterson of Dayton said he didn't want one, and that Wrigley had been taken care of "in the revenue bill by taking the tax off chewing-gum made by Wrigley." Mr. Harrison cited the press dispatches as quoting a Wrigley speech at the dinner to this effect: "I am not a speaker, but here is my check for \$25,000." The Democratic Senator thinks "it must have cost every one of those distinguished representatives who were there some three or four thousand dollars to eat at that table." The Mississippi Senator continued, as quoted in *The Congressional Record*:

"The leaders of the Republican party are now beginning to get up a campaign fund which will buy the election. But let me say this: That the American people are reading. They know what is going on in the Senate of the United States and in the House of Representatives. They know how the big dinners are

"The popular darkness must be illuminated. The virtues, the achievements of the Republican majority must be drilled into the heads of the sulky, stubborn and misinformed public. For such a difficult educational task \$500,000 looks a Liliputian sum. Unfortunately, for months Congress has been educating the voters to dislike and distrust it; and that education will continue to be given so long as the session lasts."

The Republican explanation "will require a great deal of salt to make it go down," thinks the *Baltimore Sun* (Dem.), which sees in it an admission that "the Republicans are in a hole," and is unable to find any "great achievements" that the Republicans can tell the voters about. "With tariff legislation pending," it does not seem likely to the *Philadelphia Record* (Dem.) that "there will be any difficulty in getting the funds which the Republican financial experts ask from tariff beneficiaries." But this paper does not believe "that will be enough to elect another Republican Congress this year."

And there is criticism even outside of strictly Democratic circles. The *New York Globe*, an independent paper with Republican leanings, which supported Harding in 1920, sees "grave danger that the party which through Lincoln freed the negro bondsmen and through Roosevelt dared to challenge the abuses of railroad corporations, may become the agency through which plutocratic privilege fastens its hold upon America." *The Globe* continues:

"The group of men able and willing to make large political gifts belong to the class which through the tariff, the ship subsidy and the railroad legislation is being given tender consideration by Congress and the Administration. . . .

"The lid is off and all so inclined may cast their bread upon the waters—in any quantity—in the not unreasonable hope that it will return after many days.

"The Republican party, which now includes Progressives, can not survive in its present form if its managers make of it a tool of privilege. That those in command are willing so to abase the party of Lincoln and Roosevelt is apparent both from political plans and from the legislative program at Washington. They are embarking upon a perilous adventure which leads only to disaster."

It seems to the *Chicago Daily News*, a paper of like predilections, that "at Democratic cash-raising meetings, ardor and enthusiasm equal to that of the Republicans will be displayed." But, cautions the *Chicago* editor:

"It would be well for the political managers planning successful appeals for campaign cash to give some thought to the sentiments and ideas of the voters. This is not a year of promise for partizan hacks or partizan ranters. It is a year of insurgency.

"National committeemen and private individuals of influence within the partizan organizations would better sing small when money is the theme, and address the people in terms of sound legislation and wise policy."

What is at least semi-official Republican defense of the campaign fund plan has come from Senator Medill McCormick, Chairman of the Senatorial Campaign Committee. This one-time Progressive is quoted in *The Congressional Record* as declaring that the taxpayers know, or should know, that their tax burdens have been lightened by Republican rule; that farm prices have been raised; that "during the last ninety days 2,000,000 idle men have gone to work" because there is promise that the "tariff will become a law"; and that we are better off than people in Great Britain, Scandinavia, the Argentine, Brazil and Chile. So this Republican Senator counts it "no offense against good citizenship" that Chairman Adams of the Republican National Committee and his associates "are planning to bring the facts to the knowledge of the American people."

TIME FOR THE FAT-PURSE BOYS TO FEED THE ELEPHANT.

—Walker in the *New York Call*.

being held in the White House. They know who are being invited there, and that the dinners are being held when legislation favorable to the representatives of those interests is being enacted.

"From the hills, the small villages, and the little towns, as well as large cities, from all over this country, workshops and counting-rooms, farms and schoolrooms, mining-camps and ranches, the small contributions will come into the party that opposes you, in order that your political infamy may be condemned, and 'a Government of the people, for the people, and by the people' may again be given control of the Government."

According to a *New York Times* (Dem.) dispatch, the Republicans agreed to raise a fund of \$500,000, to be used in the coming campaign, not for Senatorial or Congressional candidates individually, "but for a general effort to convince the country that it would be a great mistake to swap political horses while crossing the 'reconstruction stream.'" This money, as *The Times* notes editorially, "is not to be used solely or specially for the promotion of the orthodox tariff." It is to be, rather, "a general educational fund"—

ANTI-MILITARISM WINNING JAPAN

A VICTORY FOR ANTI-MILITARISM in Japan is seen by American editors in the elevation of Admiral Baron Kato to be Premier. The leader of the Japanese delegation at the Washington Conference for Limitation of Armament, and "being responsible, so far as Japan is concerned, for the negotiation of the Washington treaties, he is the best possible man to see that those treaties are not only ratified, but strictly observed," thinks the *New York Times*. And Baron Kato should be fully as popular in Japan, except with the militarists, as he is in the United States, observes the *Syracuse Post-Standard*, for "he strongly favors a policy of retrenchment throughout the Government. In fact, one of his reasons for favoring the naval reduction program was that such a plan would reduce the taxation burden upon the Japanese people." "He has also shown himself to be in favor of developing Japan's international relations with the world," notes the *New York Herald*. These are only a few of the bouquets which American editors bestow upon the new Premier of the Sunrise Kingdom.

"The United States and Japan are parties to a treaty for the regulation of international affairs on and about the Pacific," is the way the *Worcester (Mass.) Gazette* sizes up the situation; "therefore, Japan's attitude toward that treaty means something to us—to all of us." And the Premier, it might be added, is the person who formulates that attitude. Reaching over the mass of bouquets for something more meaty, we find in the *New York Herald* that—

"Admiral Kato succeeds Baron Takahashi, who came to his office last November, following the assassination of Takashi Hara. Both of the new Premier's immediate predecessors had attained prominence in Japanese political life. Hara especially was representative of new Japan's public servants. He had come more from the people than from the aristocracy, and he brought to the Premiership an understanding of the every-day problems of the Japanese. He was able to hold not only his own party but most of the other turbulent parliamentary parties in order, and thus obtain legislative action.

"In succeeding Hara, Takahashi also succeeded to the leadership of Hara's party, which was then and still is the dominant political party in Japan. He came into power soon after the meeting of the Washington Conference, and it was feared that a clash between him and Admiral Kato would defeat the latter's plans. Takahashi, however, refused to interfere with the instructions which the delegates had received, and Kato continued as the leading spirit of the Japanese delegation. Takahashi was unable to hold his party in line, and its factional fights and consequent lack of support finally forced his resignation. This brought about the situation which permits Kato to present to Japan a program based upon the policy which he favored and supported at the Washington Conference.

"Admiral Kato belongs to no political party, but it is understood that the backing of the majority, or the Seiyukai, party has been promised to him. The opposition which confronts Kato is not an opposition to his policy of limitation of armament, but to the fact that the selection of a man without party affiliation was a blow at the development of party government in Japan; in other words, that his appointment was reactionary. Kato, however, has shown himself a rather shrewd politician by making sure of the support of the Seiyukai. He comes to his post with an understanding entered into by army leaders agreeing to a policy of retrenchment and a considerable reduction in the army budget. He has the privilege, too, of making the same promise as regards the naval budget. In fact, Admiral Kato has an opportunity to relieve Japan of its greatest burden such as has not fallen for years to a statesman of his country."

B. W. Fleisher, a Tokyo correspondent of the *Philadelphia Public Ledger*, cables to his paper that Premier Kato not only stands for a reduction of the Japanese Army, and for the restoration of amicable relations between Japan and China, Japan's best customer, but also for the early evacuation of Siberia. While this last move will be popular with the people of Japan, for financial reasons, the new Premier will encounter strong opposition from the military element, predicts Mr. Fleisher.

That the new Premier's path will not be one of roses is indicated at every turn. The fact that seven of the members of the new Japanese Cabinet formed by Premier Kato are peers, and therefore "can hardly be expected to meet the demands of the people," is noted by a section of the Japanese press. Moreover, observes the *San Antonio Express*, "the war boom is over and Japan is feeling the pinch of lower wages, unemployment, and general business depression. Popular unrest continues, and may grow acute at any moment." The new Government, therefore, faces a dangerous situation, in the opinion of *The Express*. The country is seething with radical ideas, says Mr. Fleisher in his dispatch, and the people, adds the *Boston Tran-*

THE ADMIRAL WILL REDUCE THE ARMY.

Admiral Baron Kato, Japan's new Premier, is pledged to reduce the Japanese army budget by \$20,000,000, and to withdraw Japanese soldiers from Siberia.

script, are dissatisfied over the fact that the Washington Conference has not been followed by a large reduction in taxes.

The real test of the new Japanese Government, however, in the opinion of the *New York Evening Post*, concerns China and Siberia. "An order for withdrawal would be sure to arouse the militarists," says the *Newark News*. As this paper explains:

"Premier Kato has other forces to fight than those of the militarists, however. He is not an advocate of manhood suffrage, as is the leader of the Kenseikai party, headed by another Baron Kato, the author of the notorious twenty-one demands made upon China in 1915. There are other questions of domestic policies on which he is in disagreement with leaders of the Opposition parties, but he has tried to avoid some of them by choosing what he calls a non-party Cabinet. This is in reality a coalition that may be intended to center support for the new government upon the big questions that affect Japan internationally.

"Premier Kato may be a reactionary, as in some domestic affairs, but if he is a consistent progressive in holding down the militarists so that Japan shall keep her pledged word to the nations of the world, then he has an opportunity to clinch the hold he made on popular confidence when he was in Washington."

"HELP WANTED" AGAIN

THE "HELP WANTED" SIGN, which was in obscurity for so many months, now makes its belated appearance, only to find that the worker in many States has been absorbed in agriculture or some other industry. In fact, points out the *Christian Science Monitor*, of Boston, "whereas within recent months there was much unemployment throughout the

United States, it is shown to-day that virtually all workers who are not voluntarily idle or on strike can find profitable employment." In two States, Kentucky and New Mexico, according to reports to the Department of Labor, the unemployment problem has virtually solved itself. "In almost every line of business," notes the *Washington Star*, "there is a steady, if slow, increase in employment. There is no boom, just as there has been no panic; the reaction is gradual, just as the decline was gradual, and this is more wholesome than a spasmodic revival would be."

In more than twenty States, says the Department of Labor, there is already a shortage of workers in some industry. In a large number of agricultural States the reports tell us that there is a shortage of farm help. Pennsylvania, Missouri, the District of Columbia, Wyoming and Colorado report an actual shortage of building construction mechanics, while Indiana, Michigan, Wisconsin and Ohio need more skilled automobile workmen and shop laborers. A shortage of metal miners is noted from Arizona, and a shortage of lumber-mill workers is reported from California and Washington. As Ralph F. Couch remarks in a bulletin prepared for "Science Service," Washington, D. C., "the outlook on industry from the standpoint of the worker is now more encouraging than at any time in many months." "Better business isn't any longer 'just around the corner,'" agrees the *Baltimore American*; "it's here." "Perhaps as convincing proof as any that industry is reviving may be had by comparing the 'Help Wanted' columns of newspapers of 1921 in any part of the country with those of to-day," points out the *San Antonio Express*. "Within a few months the United States will be operating upon a normal economic basis," predicts the *Pittsburgh Leader*, and we read in the *Christian Science Monitor*:

"The chief manufacturing industries are operating at approximately normal capacity, building has been resumed in many of the larger cities, the renewed activity being reflected in the steel mills and in the lumber mills and camps, while the farms are demanding, tho at somewhat decreased wages, an army of men to care for the season's crops.

"It probably can be shown that money available for all these purposeful activities is no more plentiful, generally speaking,

than a year ago. The renewal of employment is due, to some extent at least, to the adjustments which have taken place in wage and commodity costs, but something above and beyond this has brought about a stabilizing influence. It may be difficult for business experts to analyze the moving forces in this transition, but their research and study, if properly directed, would necessarily end in the conclusion that the change is due solely to the restoration of public faith and confidence."

"Outside of the coal strike, which has thrown about half a million men out of employment, labor conditions are stable," notes the *Washington Star*, "despite the fact that the employment situation seemed dark last autumn." Yet, as President Harding remarked a few weeks ago, in giving Secretary Hoover and his colleagues credit for their valuable services to the Unemployment Conference at Washington, "we have passed the winter of the greatest unemployment in the history of our country." The gain in employment apparently has been more rapid than American editors believed it could be. Says the *New Orleans Times-Picayune*, for instance:

"Two or three months ago the suggestion of a labor shortage was remote. It was believed at that time that measurable relief of conditions was the best that could be expected of the immediate future, and no one was too sure of that. But April campaigning took many men from the ranks of the jobless army, and May hit it a terrific jolt, with the result that more than two million men have been put back to work in the last ten months and employers in a number of industries are unable to supply their requirements.

"Labor shortages have been reported to the Department of Labor by four of the major activities—automotive industry, lumber industry, building trades and the farming industry. The automotive industry is rather worried for fear the shortage will become serious. Its factories are doing a heavy business, the output thus far this year in automobile production surpassing the entire output of 1921. Lumber interests of the Northwest

declare it is a problem to find labor for their needs, orders being received in a greater deluge than at the high tide of war manufacture. In North Carolina it is said there is not an able-bodied man, save those of the clerical class, out of work.

"Let it not be understood that there is a general labor shortage in the country. We are far from that yet. Many men are still hunting jobs, but jobs are easier to find than they were."

TIME CRIMINALS WERE REMINDED THAT—

Copyrighted, 1922, by the Chicago "Tribune."

THE MACHINERY FOR DEFEATING JUSTICE

IS NOT AS POWERFUL AS THE ARM OF JUSTICE.

—McCutcheon in the Chicago Tribune.

STERNER JUSTICE FOR CRIMINALS

THIMBLE-RIGGING AND HOCUS-POCUS within the law, to use the words of the Albany *Knickerbocker Press*, are to cease if the sweeping reforms advocated by the Committee on Law Enforcement of the American Bar Association are put into effect. "That there is something radically wrong with the administration of criminal law in America has long been apparent," notes the Indianapolis *News*, "and it is encouraging to find influential lawyers considering the crime evil in America and seeking to have remedies for it adopted." While, as the Baltimore *Sun* observes, "some of these suggestions would have been considered ten years ago too radical for consideration by some of the men who now make them," there is general agreement that broad changes in the law are needed to prevent the miscarriage of justice and the escape of the guilty. As the Brooklyn *Eagle* comments upon the first session of the Committee on Law Enforcement, which was held in New York during the first week in June:

"When a lawyer of the standing of Henry W. Taft declares that 'it would be better if the rules of evidence in criminal cases were wiped out entirely' and hearsay testimony were freely admitted; when a judge from Chicago talks seriously about the good effects of the flogging laws in England, Canada and Delaware; when ex-Justice John W. Goff suggests the disbarment of lawyers who give interviews discussing their cases before trial; when Justice Crain of General Sessions urges barring the admission of confessions made to the police by men under arrest—when these and other drastic suggestions of changes in the law and its administration are urged at a single session of a committee, it is clear that the lawyers have become convinced that our present system of criminal jurisprudence is outworn and needs sweeping revision."

"American criminal jurisprudence is at least a century behind the times," agrees the Albany *Knickerbocker Press*, "and this is simply because it has altered little, if any, since the American Revolution, when the English procedure was taken over bodily as it then existed, but which that country long ago discarded." "The trouble with the rules of evidence," points out the Providence *Journal*, "is that the changes which have been made in them have been almost invariably in favor of the defendant." "It is all very well to throw the greatest possible precaution around accused persons to protect them," observes the Milwaukee *Sentinel*, "but when criminals caught in the act are able to use the intricacies of the law to defeat its very intent and purpose, our court procedure must necessarily suffer in public estimation." And as we read in the Washington *Post*:

"This matter of criminal procedure is of as vital importance to the average citizen as to members of the American bar. It is the average citizen who suffers from crime waves and crime generally, and he has come to lose much respect that he ought to

have for the criminal courts by the feeling that a smart lawyer and the tricks of evidence are more potent in protection of law-breakers than all the preventives in operation in staying the commission of crimes."

As an instance of how the English system works, it will be recalled that Horatio Bottomley, who recently was sentenced to seven years penal servitude, received the sentence immediately after the verdict of "guilty" was handed in by the jury. This action, contends Judge Goff, had a deterrent effect which is almost if not entirely lost if there is delay in sentencing a prisoner. In the opinion of the Baltimore *American*—

"Great Britain has a legal system much superior to ours in at least one respect—the smoothness of its work. Moreover, the British have learned to respect and to uphold the power of the courts, and justice speaks for itself; and laws which inherently do not command public respect are not written."

"We have developed certain prejudices that undermine the integrity of the law. In the average case it is practically impossible to convict a woman on a murder charge. If she is convicted, her sentence is made, as a rule, absurdly light. It is frequently difficult to convict a man with plenty of money to spend on his defense. But whatever the motives of legal misdirection in this country, the underlying cause is, or would certainly seem to be, the doubt of punishment in the mind of the perpetrator. It is better, says the adage, to let ten guilty men go free than to punish one innocent one. But there is no necessity of letting the ten go free if we will operate the courts as they should be operated."

"The cure for the crime evil is to be found in existing laws," declares the Springfield *Republican*, and the Chicago *Daily News* agrees that "if criminals were made to serve out their sentences, there would be less crime for which to hold the police or any one else responsible." "A little less mercy for predatory human brutes, and a little more for a long-suffering public," is the recommendation of the Omaha *World-Herald*. "It is time to curb maudlin sympathy," asserts the San Francisco *Chronicle*; "it is imperative that the probation power and the pardon power be not abused." "One of these days," predicts the New York *Telegram*, "a plain, blunt man will rise and make the astounding statement that the way to curb crime is to curb it." This could be done, thinks *The Telegram*, by—

(1) Imposing flat sentences, making ten years' imprisonment mean ten years and not six years and three months or less.

(2) Resurrecting the statute making perjury a crime and inflicting heavy sentences for false swearing.

(3) Compelling open instead of secret sessions of the Parole and Pardon Board.

(4) Making the law in every way what it should be—a source of protection to the law-abiding, and a terror, instead of a joke, to the law-breaker.

(5) Unearthing persons who traffic in pardons.

(6) Enforcing the habitual criminal law so that there would be fewer 'lifers,' mysteriously pardoned, walking the streets."

FOREIGN - COMMENT

HOW THE BANKERS "SAVE" GERMANY

WHAT'S ONE MAN'S GRIEF is a German's rejoicing, is humorously remarked by many who note the wave of happiness which overspread Germany when the International Bankers' Committee decided she could not have a loan "just at present." Yet it is evident why the Germans jubilate, they say, when you read in the *Berlin Germania* that: "The death verdict has been pronounced on the Allied reparations policy by the body of experts expressly intrusted by the Reparations Commission with the task of investigating the subject." This newspaper considers the bankers' verdict not only thorough, but also "official," and the *Berlin Tageblatt* declares that "every line of the bankers' report reflects more genuine wisdom than is contained in the Olympian head of Poincaré or any other Chauvinist." Moreover, it declares that the findings of the bankers "should be Germany's Magna Charta to show the French that the London Agreement demands can not be fulfilled."

For all that, Berlin dispatches advise us that Chancellor Wirth and the principal members of his cabinet are preparing for the Parliamentary fight sure to follow the failure of the loan negotiations. Government officials are quoted as saying that Germany will continue to make provisional payments of 50,000,000 gold marks monthly, from July to the end of the year. In addition Germany is said to intend to pay in paper the equivalent of 1,200,000,000 gold marks to meet the cost of the armies of occupation.

But the most startling sequel to the loan failure, according to some observers, is the proposal of six specific conditions in the *Berlin Deutsche Allgemeine Zeitung*, "on which the Entente must yield before Germany can meet her reparations obligations." We are reminded that this daily is perhaps the most influential of the many owned by Mr. Hugo Stinnes, Germany's world-famous post-war millionaire, who is said to exercise an influence in the new republic commensurate with his economic might. The six points appear in an editorial that is described as "obviously inspired," and with parenthetical explanations of American correspondents, read as follows:

"First—Evacuation of Duisburg, Düsseldorf and Ruhrort (Rhineland towns occupied as a penalty by the Allies) and abolition of the 26 per cent. export levy.

"Second—Evacuation of the left bank of the Rhine. (Provided in the Treaty of Versailles.)

"Third—Evacuation of the Saar Basin. (Occupied according to the treaty.)

"Fourth—Free trade for Germany with Danzig and through the corridor specified in the Versailles treaty.

"Fifth—Boundary regulation in Upper Silesia in accordance with the Versailles Treaty. (District divided between Germany and Poland by League of Nations.)

"Sixth—Elimination of the most favored nation clause."

Now French opinion is said to have undergone a decided change

since the declination of the Bankers' Committee to consider an international loan for Germany in view of present conditions. The most significant sign of this change is found in the proposal of the semi-official *Paris Temps*—made twenty-four hours after the Bankers' Conference closed—that the Reparations Commission appoint an international committee to investigate Germany's capacity to meet the present schedule of reparations payments. This important daily suggests that such a committee be sent immediately to Germany and that all sources of information be opened to it, after which the Committee should make a report to the Reparations Committee on Germany's ability to pay and the procedure whereby she could be assisted to pay. "This would be serious business," the *Temps* admits, "but serious business is necessary if

one would cure Europe now." Incidentally some French newspapers note that the refusal of a loan to Germany makes it questionable whether the Control Commission which was to start to Berlin would be permitted to exercise the powers granted it by Germany's promise of May 31st. In the meantime we are informed that the final arrangements have just been signed which make effective the Wiesbaden accord for the delivery of materials to France in place of a certain percentage of the reparations money. By some this is considered an augury of good hope, and certain American correspondents at Paris say that in well-informed circles "it is now generally believed that the Bankers' Conference is to have immediate results in the reconsideration by the Government and by Parliament of France's Reparations Policy." But other American correspondents assure us that France will refuse to reconsider the reparations figures until she has a clear idea where she stands with regard to her debts, and the Paris representative of a New York daily writes:

"The story of the Bankers' Committee should show clearly the firmness of France's position. Not only does France see political advantage in maintaining intact her position as Germany's creditor, but also she sees an important material advantage in not cutting the reparations figures at this time. The higher those figures are the better position she will occupy in the eventual adjustment of international financial obligations, which Europe regards as inevitable.

"Bluntly put, the Allies are betting on the United States finally coming to cancelation of the Allied debts to the Wash-

—Kladderadatsch (Berlin).

ington Government. Certainly, the bankers' findings lend force to their argument. It is true the bankers did not go into a discussion of the interallied debts, largely because J. P. Morgan refused, on the ground that he held no mandate from the American Government. Yet any one who followed the talks of the eminent financiers knows they really gave deep consideration to the factor of the interallied debts. There is almost no argument which can be used for reduction of the German indemnity

included, wants to stop the overissuing of paper money, it would be better, if a loan is impracticable, to forego the claims which would make their overissue obligatory."

This famous newspaper goes on to say that it would not be easy to "reconcile France to getting no more cash this year," and certainly it "would not look well," and would add to her financial difficulties, which are considerable. France wants cash even more than goods, according to *The Guardian*, and adds:

"Even if France subscribed as much to the loan as she got out of it—and she would probably subscribe less—her financial difficulties would be eased. But the chief merit of a loan would be that it would for the first time give a large number of people in France, England and America a direct and obvious interest in Germany's welfare. Of course Germany's welfare is our welfare. Of course she can not pay an enormous indemnity unless she is economically active and prosperous. Of course her ability to pay is, and has been, diminished by pressing demands upon her which have ruined her currency and helped to dislocate all the exchanges of the world. But it has taken several years for people to see these things, and even now they seem to be only dimly aware of them."

DO AMERICAN FARMERS WANT A HIGH TARIFF?

LOW TARIFF SUPPORTERS for half a century, the American farmers of the West are said to have become "rampant protectionists overnight" by some Canadian editors, although others question the accuracy of such a statement.

Among the doubters is the *Winnipeg Manitoba Free Press* which cautions us "not to rely upon the alleged conversion of the farmers until it is tested by a reasonable period of probation." That there are divergent views on the subject among newspapers on the American side of the boundary line is evident

THE GREAT EUROPEAN PUZZLE.

"How to get all the nations assembled in the Temple of Reconstruction."

—De Amsterdammer (Amsterdam).

which does not apply to interallied indebtedness, with the possible exception of that of England. . . .

"It has been told in these dispatches how American credit affects the European situation, how England will cancel £2,000,000,000 if we cancel the £1,000,000,000 she owes us, and how the German reparations bill would be cut in half were the American debt canceled. But every indication from America points away from any such step by Washington. Perhaps the Allies will come to realize that they must adjust their positions without any aid from America. But they have not realized that yet."

In England, the *Manchester Guardian* believes that the German Government regards a foreign loan as the root of the whole matter of reparations and it says that "if one argues on the assumption that the Reparations Bill must stand, this conclusion is irresistible." Either inflation or a foreign loan is the alternative, according to this daily, which proceeds:

"Of the two it will be admitted that a foreign loan would be preferable. Germany and the Reparations Commission seem to be agreed that this year's payments in kind can be met without recourse to inflation; the doubt concerns only the cash payment, which is much the smaller of the two. The Germans are convinced that if they are not to inflate, no cash can be paid without a loan, and the negotiations clearly imply that the Commission agree with them. If that is so, it ought to be clearly stated. Hitherto the cash that has been handed over has been raised simply by debasing the currency, but it has always been pretended that this was wilful debasement, that the demands for payment were reasonable, and that the collapse of the mark was not the fault of the Commission, but just another deep-laid German plot to cheat us. But Germany has now accepted the terms of the Commission, drastic tho they are, for the control of her finances and for the reform of her Budget. Even so, there will be a gap. The Commission can not, therefore, pretend any longer that the bridging of the gap with paper marks will be a work of wilful wickedness. It will, in the absence of a loan, be the only expedient left. And since every one, the Germans

PLEADING WITH THE ROUGH-HOUSE GUEST.

MANAGER LLOYD GEORGE: "Come now, Fritz, be reasonable. At least pay for the cigar."

—*The Bulletin* (Sydney, N. S. W.).

from a study of their columns. An independent newspaper, the *Springfield Republican*, tells us that the American farm bloc is "a political body controlled by political forces for political ends, and it is out for whatever a tariff can do to boost farm prices." So long as the agricultural West is "obsessed with the idea that high tariff duties will benefit the farmer," this daily avers, the

tariff situation "may be hopeless"; but later, it is predicted, the farmers will get over their obsession. *The Republican* discloses the Western farmers' frame of mind by citing the remark of Senator Poindexter of Washington, as follows: "We of the West are tired of being the servitors of the great Eastern manufacturing States which have been built up by protective tariffs. If you are going to have protection, give it to the West as well as the East." On the other hand, the *Buffalo News* cites Senator Capper of Kansas as saying: "Many of our agricultural products are on an export basis, and the tariff will not help the producers of these products except under special conditions and on special grades." Returning to the Canadian side of the line, we find *The Manitoba Free Press* recalling that:

"The Western farmer was against a high tariff every time he had a chance to vote on that issue. When did he change his views? He was out of the regular Republican party in 1912 and in 1916. In the presidential election of 1920 the tariff issue cut no more figure than it did in the Dominion elections of 1917.

"We are not forgetting the Emergency Tariff Act. But we must remember that it was only intended to last for six months. It was passed during that period of consternation, amounting to hysteria, which possessed the American farmer when wheat, corn, hides, wool, cotton, tobacco, and other farm products suddenly dropt from wartime prices to a pre-war level. The mistake of the farm 'bloc' was in trying to make this a permanent policy. This led them into strange alliances, and finally committed them to the support of the present tariff bill."

The Manitoba Free Press goes on to say that there should be no divergence of views on the tariff question between the farmers of Canada and the United States, for their economic position is similar. Farmers on both sides of the line, it is pointed out, have to dispose of their surplus crops in an unprotected market, and that market is Europe, and this newspaper continues:

"To the farmer, Europe appears as a customer; to the manufacturer, as a competitor. Some of the big manufacturers, it is true, desire export trade. They are quietly doing all they can to obstruct the tariff bill now going through the United States Senate. But, generally speaking, the manufacturer desires no trade with foreign nations. If he can have a monopoly in the home market, the rest of the world may go hang. The farmer, on the other hand, must sell abroad. A law prohibiting both imports and exports would mean his utter ruin. Hence, sooner or later, in any country the farmer and the manufacturer come to the fork in the road on the tariff question.

"That was evident in the United States thirty-two years ago when the Western farmers marched out of the Republican party almost in a body as a protest against the McKinley bill. It was evident in 1910 when history repeated itself in the case of the Payne-Aldrich tariff bill. The conflict of interest is even greater to-day, for the United States is a creditor nation. Europe has little gold and the farmer must take his pay in goods."

How, then, are we to account for the fact that the Western farmers, or at least their representatives in Congress, are supporting the tariff bill now before the Senate, asks this newspaper, and it confesses that no enlightenment is to be had from the members of the Senatorial Farm Bloc. They are "voting for the tariff bill, but saying nothing in its favor," and we read:

"They are conspicuous by their absence from the chamber except at roll call. The inference is that they have made a bargain with the Republican majority to vote for the tariff bill as reported by the finance committee in consideration of the high duties carried in that bill upon agricultural products.

"Some of these duties, notably those upon wool and sugar, may be of real cash commercial value to the wool and sugar producers of the United States. The duties upon grain, live stock, hides, long staple cotton, dairy products and tropical fruits will be of no benefit if we are to rely upon results so far accomplished by the emergency tariff. Meanwhile, the bill going through Congress must of necessity add to the farmers' cost of living and cost of production because it imposes ferocious duties upon iron and steel, woollens and building material. Every possible door is closed against imports, and the zeal for protection becomes grotesque when we find shoes, salt, sand and cement transferred from the free to the dutiable list."

KEEPING BRITAIN'S EMPIRE BRITISH

IF ALL THE BRITISH-BORN SUBJECTS who settled in the United States of America during the past forty years had migrated to countries within the British Empire, it has been estimated that they would have added at least 20,000,000 more people to the population of the Dominions. This loss of true-born Britons is guarded against, we are told, in the Empire Settlement Act, 1922, for the official copy of it provides that: "It shall be lawful for the Secretary of State, in association with the Government of any part of His Majesty's Dominions, or with approved private organizations either in the United Kingdom or in any part of such Dominions, to formulate and cooperate in carrying out agreed schemes for affording joint assistance to suitable persons in the United Kingdom who intend to settle in any part of His Majesty's Oversea Dominions." The text of the Act informs us further that an agreed scheme under this Act may be either:

"(a) a development or a land settlement scheme; or (b) a scheme for facilitating settlement in or migration to any part of His Majesty's Oversea Dominions by assistance with passages, initial allowances, special training or otherwise; and shall make provision with respect to the contributions to be made, either by way of grant or by way of loan or otherwise, by the parties to the agreed scheme toward the expenses of the scheme."

It is further provided that the contribution of the Secretary of State "shall not in any case exceed half the expenses of the scheme," and that the liability of the Secretary of State to make contributions "shall not extend beyond a period of fifteen years after the passing of this Act." Furthermore, the aggregate amount "expended by the Secretary of State under any scheme or schemes under this Act shall not exceed one million five hundred thousand pounds in the financial year current at the date of the passing of this Act, or three million pounds in any subsequent financial year."

Australian editors are particularly interested in settlement matters, and *The Brisbane Courier* notes with satisfaction that for the first time the British Government is directly cooperating with the Dominion in turning the outward stream of emigrants toward the countries within the Empire where there is urgent need and abundant room for their absorption under conditions "better than they could ever hope to enjoy in alien lands, antagonistic in sentiment and possibly uncongenial in outlook." What is more, it is asserted that:

"The supreme importance of retaining this migrant population under the British flag was recognized in all its manifold bearings during the great World War, when the Empire had to fight to the death for its existence. In the effort to guard against a similar leakage in the future, the British and the Dominion Governments are merely inspired by the natural motives of self-development rather than of self-preservation. The British race has its allotted destinies to fulfil in the scheme of world politics. Its genius for colonization and expansion can best be fostered by relying on the help of its own manhood and its own womanhood. Its capacity for building up the institutions of freedom under which its people can live most happily and thrive most prosperously can be increased only by increasing its strength for the performance of the countless tasks of peaceful development along the roads leading to material prosperity. An Empire settlement scheme, such as the latest British legislation is intended to encourage, would supply the necessary means for attaining in our time the ideal of an Empire, one in sentiment and one in national traditions and aspirations. It remains now for the Dominions to reciprocate with equal vision and statesmanship by providing the lands on which their kith and kin from overseas can establish their homes and add to their country's resources, strength and safety."

Everybody in the Dominions would seem to be pleased with the Empire Settlement Act, but the farmers of England have lifted their voices in protest against it. In a statement by the National Farmers' Union they lament that "British agriculture is to lose the youngest, the most enterprising, and the best of

its workers, and British food production must decline in consequence." The Union asserts its conviction that the farmers "can not but recognize the fact that the Overseas Dominions do not want the surplus population of our towns and cities, but trained agriculturists from our countryside," and the statement continues:

"Official spokesmen of Canada and Australia have made it

"THEY THAT LIVE BY THE SWORD—"

—L'Asino (Rome).

quite plain that it is trained land workers they want as immigrants. The new Canadian regulations, we understand, have placed an embargo on all but agriculturists and domestic servants, who need have no capital so long as they pass the occupational test.

"We are not unwilling to play our part as citizens of the Empire for the common good. We are not unwilling to do what we can to lend a helping hand in the worthy task of fitting boys for a useful career. But we ask Mr. Amery to satisfy us that we are not being asked to assist to undermine the position of the country's greatest industry, by which our members live, and the continued decline of which must inevitably be injurious to the nation."

But the objections of the farmers seem ill-founded to the *London Morning Post* which insists that the main purpose of the Empire Settlement Act is to relieve the great towns of their surplus population. This daily believes that the farmers "tend to regard all townsmen as artisans who are totally incapable of working on the land." Now a townsman is not what the farmers call an agriculturist, *The Morning Post* concedes, but—

"There are thousands of young men in every great manufacturing town accustomed to hard manual labor; and there is also a deplorably large number of young men who are perfectly fit for work, but who can not get it. Australia, in particular—a country which is not mentioned in the farmer's memorandum—needs strong men able to do pioneer work, laborers and miners, rather than skilled farm laborers. Moreover, we are by no means sure that the country can not well spare a proportion of its farm laborers. The farmers must know that during all last winter there was a deal of unemployment in their industry. Will the farmers assert that the sons of a farm laborer or farm-hand can always find work on the land? We think not. We believe that every year numbers of country boys enter the railway services and the police force, and the Army, while some drift into towns and there remain. It seems to us that the objections to the Empire Settlement scheme expressed by the farmers are based upon the fallacy that the population is a fixed quantity. The farmers seem to forget that if all their best men left the country to-morrow, in a few years they would be replaced by the growing generation."

EUROPE MAD TO AUSTRALIAN EYES

A RAID BY THE POLICE and the taking of the "whole senile, querulous mob" of European nations to an alienist for examination is apparently the only real remedy for the European situation, sarcastically declares the Australian *Sydney Sun*. So it would appear to fortunate onlookers in Australia, the United States and South Africa, to whom there seems no doubt but that Europe has "gone mad," for this newspaper points out that "after a mad war to end war, a whole litter of new wars has been spawned." Everywhere on the crowded European Continent, we are told, secret and open alliances are being sought and concluded, and they can result "only in the futility of more wars," and we read:

"Germany allies herself with the Bolsheviks; Italy becomes the close friend of Turkey; France waves the sword. Chauvinism and Bolshevism invoke the other 'ism,' militarism. The Little Entente has its intertribal quarrels, and the Big Entente has a bigger row. Ireland, after having a little war with England, now has a little war of her own.

"What is the matter with Europe? The only diagnosis that will explain her condition is that Europe is suffering from senile decay. The frontiers of every State, except Switzerland, Andorra and Monaco—which lack navies—are manned by querulous old gentlemen suffering from the delusion of persecution.

"Everybody in Europe suspects the other fellow over the

A SWISS DIALOG.

WAR: "What are you crying for, kid?"

WAR: "Ah, quit your cryin'—I'll be back one of these days, and mix it up all right."

—Nebelspatter (Zurich).

frontier. The trouble seems to be that there are too many frontiers, and the nations are packed too closely together.

"Every nation feels the instinctive dislike for its compulsory neighbor that the suburban resident feels for the man next door. Even when Bulgaria merely wants to borrow Roumania's lawn-mower, the two elderly gentlemen glare at each other over the back-yard fence, and their wives shout nasty insinuations across the palings, and the children put out their tongues to each other."

SCIENCE - AND - INVENTION

TWENTY MINUTES OF RAILROADING

THE PRESIDENT of the American Railway Association, R. H. Aishton, having been requested to make a twenty-minute address on "The Railroad Situation" before the Academy of Political Science at the Hotel Astor, New York, conceived the brilliant idea of occupying his time by telling his auditors just what American railroads were doing while he talked—what they did, what they earned, what they spent, in the course of twenty minutes. The yearly figures, Mr. Aishton noted, are too large to understand without strain. To say that the first-class roads of the United States moved 306 billion tons of revenue freight one mile in the year 1921 is somewhat confusing, whereas the figures for twenty minutes are down among the thousands, and quite within our comprehension. "Let us," said Mr. Aishton, "get down to something we can all understand without undue mental strain."

He went on, as quoted in *The Railway Review* (Chicago):

"I have been allotted twenty minutes. During that twenty minutes the energy developed by the railroads is equivalent to moving a train consisting of a locomotive with ten freight cars, carrying 311 tons of revenue-paying freight, with two more freight cars containing 38 tons of company freight that doesn't produce revenue, with two passenger cars, containing 38 paying passengers, together with the employees necessary to operate the train, with the necessary postal, baggage and express cars, and a little old red caboose, a distance of 37,500 miles, or once and one-half times around the earth at its greatest circumference.

"What do they get for performing this service? The year 1914 is taken for comparison, because it marked the start of the European War, the beginning of all our troubles:

"In 1914 every 20 minutes the gross earnings were \$115,347.

"In 1921 every 20 minutes the gross earnings were \$209,874. An increase of 82 per cent.

"In 1914 every 20 minutes the operating expenses were \$83,844.

"In 1921 every 20 minutes the operating expenses were \$173,652. An increase of 107 per cent.

"In 1914 the payroll for 20 minutes, \$50,888.

"In 1921 the payroll for 20 minutes, \$106,579. An increase of 109 per cent.

"The above indicate what's the matter, and beyond all that consider this also:

"In 1914 every 20 minutes there was paid in taxes, \$5,159.

"In 1921 every 20 minutes there was paid in taxes, \$10,526. An increase of 104 per cent.

"In 1914 every 20 minutes the net railway operating income (which is the amount left after payment of expenses and taxes) was \$25,158.

"In 1920 it practically disappeared, being only \$822.

"In 1921, however, with an increase of 3,091 millions in investment over 1914, the net operating income every 20 minutes was \$22,755.

"In other words, whereas the book value increased 18 per cent. between 1914 and 1921, the net railway operating income earned on the investment thus increased actually decreased 9.5 per cent.

"What are the railroads doing to bring about economy and efficiency?

"In 1921, altho the times were deprest, as was the case in 1914:

"They handled 7.7 per cent. more revenue ton miles than they did in 1914.

"They handled 8.0 per cent. more passenger miles.

"They did it, however, with 10.6 per cent. less train miles, and the train mile is what creates expense. There must have been economy and efficiency manifested there, surely.

"In 1920, with a large business, as compared with 1914, with a light business:

"There was an increase of 44 per cent. in revenue freight ton miles.

"There was an increase of about 36 per cent. in revenue passenger miles.

"Yet this was accomplished with the same train miles, practically, as 1914. As a matter of fact, it was 300 miles less every twenty minutes than in 1914. Truly a notable record!"

Every railroad, Mr. Aishton went on to say,

has been and is making the strongest individual efforts, through its own organization of experts, to develop new methods of efficiency and economy. No industry in the country has any more complete check on the minutest details of their operations, or has competitive initiative developed to a higher degree, than the transportation companies. He continued:

"The field for economy in the future lies largely, in my opinion, in two main directions—

(1) Heavier car-loading—one ton more per carload is equivalent to adding 80,000 cars to the supply.

(2) More mileage per car day—one mile additional is equivalent to adding 100,000 cars to the supply.

"These two things the railroads and shippers are vitally interested in and actively working cooperatively toward the ultimate goal.

"Most of this progress will be reflected in heavier carloads, heavier trainloads, and more miles per car per day, which, after all, are the true measures of economy and efficiency.

"The twenty minutes have now expired. Our train has completed its twenty-minute journey around the world; but while this talk stops, the train must still keep going day and night through storm and sunshine, through business depression and great activity, without a hitch and at constantly increasing speed and cargo, if this nation of ours is to continue to expand."

WHAT MR. AISHTON'S TRAIN DID IN 20 MINUTES.

Illustrations by courtesy of the Division of Public Libraries, Massachusetts Department of Education, Boston

THE HOSPITAL LIBRARY AT ELLIS ISLAND, NEW YORK HARBOR.

"Immigrants who are given the best books of a country immediately upon arrival should make good citizens."

THE CURATIVE POWER OF BOOKS

BEFORE THE WAR, organized libraries in hospitals and sanatoriums might have been counted on the fingers of one hand. Books they had, but a mere collection of books never yet made a library. Edith Kathleen Jones, general secretary of the Massachusetts Department of Education's Public Library Division, asserts in *The Modern Hospital* (Chicago) that McLean Hospital, in Waverley, Mass., a private hospital for mental cases, was the first to insist on the value of a carefully selected library for its patients with a trained, resident librarian in charge. It also formulated the principles governing the organization of hospital libraries, namely, first, an organized central library, as charming and homelike as it can be made; second, a librarian with personality, knowledge of books and library technique; third, an annual appropriation sufficient for the purchase of new books as they are published; fourth, the exclusion of morbid, gruesome and unwholesome literature. Miss Jones continues:

"McLean Hospital reorganized its library along these lines in 1904 and its librarian began to publish her theories and experiences in 1910. In these same years the Massachusetts General Hospital in Boston reorganized its patients' library, appointed a librarian and became, so far as is known, the first general hospital to institute regular book service to bed-patients. In 1910, trustees and doctors put their heads together and designed the little 'bookcart' which, eight years later, was amplified and enlarged into the A. L. A. hospital bookwagon that trundled miles and miles of war hospital corridors, carrying its welcome loads of adventure and romance to thousands of sick and wounded men. In the same year the secretary of the Iowa Library Commission, Miss Alice S. Tyler, happened to visit one of the State hospitals for the insane and was appalled by the hopeless, aimless way in which the patients just 'sat around' with nothing to occupy their minds. It seemed to her that the library commission might get books to these State institutions as well as to public libraries, and then, finding that books alone are useless unless there is some one to make the connection between the book and the patient, she interested the legislature to authorize the appointment of an institution library supervisor. Thus was born the State institution library idea. Vermont, Minnesota, Nebraska, Indiana and one or two other States quickly followed Iowa's lead.

"When the war broke out, a few States had learned to operate hospital libraries in groups; a few private hospitals had discovered the value of recreational reading as a therapeutic agent, and the advantage of carrying books to wards so that bed-patients might make a selection themselves, what books were wholesome and to be recommended, and how to interest patients in reading. Therefore, when in the spring of 1918 the Government allowed the A. L. A. War Service to place women librarians in the base hospitals, all this knowledge lay ready to hand and the association had only to organize its forces along lines already mapped out.

"As I write of those days of the A. L. A. War Service, my mind

goes back to those brave, eager, warmhearted, merry lads, setting forth with such high faith and courage on what was to them a great crusade. I see an embarkation hospital in May, 1918; the boys chafing at the delay in getting over, tender with one another, courteous and helpful to us women, appreciative of what we were trying to do for them. I remember those hospitals under the awful scourge of influenza. At Camp Devens the library was turned into a morgue, but in all the hospitals the librarians stuck to their posts and, often with gas masks on, wheeled the bookwagons through the wards or presided over outdoor tables of books for convalescents.

"No one who lived through them can ever forget those days in the New York hospitals when our first wounded were brought home. Another of my memories is of the hospital ship which sailed up the river to the Navy Yard in Charleston, S. C.; the long line of ambulances and stretchers bearing the men to the hospital, the joy of the men to be home again, the raid upon the library that Sunday afternoon by every man who could get over on crutches or in wheeled chair, and the cries of delight which hailed 'the booklady' when the librarian and two orderlies loaded down with books appeared in the wards.

"And then, in those hospitals filled with gassed and wounded soldiers, we began to be aware of a difference. Those lads whom we had sent overseas to fight our battles, merry, lighthearted idealists, wearing youth like a gay cockade, had returned men—their youth irrevocably gone, and always something of somberness and pain and never-to-be-forgotten horror in their eyes. Shattered in health, crippled, often with a mental twist, and with wrecked nerves, more than ever they called for books.

"June, 1919, found 145 librarians and six supervisors in the A. L. A. War Hospital Service in America and 121 organized hospital libraries in France. In November of that year the A. L. A. gave up its work with the Army and Navy, turning over to them all libraries and books and personnel in those departments, but continuing its service in hospitals for disabled soldiers until November, 1920, when, for lack of funds, it was obliged to suspend this work. However, so great was the protest from commanding officers, patients and nurses over the threatened loss of their libraries that the Red Cross came to the rescue and financed the salaries of the librarians until the A. L. A. was able to assemble sufficient funds to pay back the loan and carry on the work until July, 1921, when the Government assumed the responsibility. The medical officers speak in the most emphatic terms of the value of books and the professional spirit of the librarians who are able to get the men to read really worth-while things, and in some hospitals to organize courses of study. The Public Health Service is stressing medical as well as general libraries in their hospitals, and the librarians will be expected to administer both of these."

The service of the American Library Association in the war hospitals thus easily demonstrated its value. What has been its influence on civilian hospitals? Miss Jones goes on:

"Doctors and nurses returned from the Army to their home towns, remembered the organized libraries and selected books, the bedside service, and the contented patients of war days and wondered why something of the sort would not work in city hospitals.

Librarians who had served in the camps looked at the full shelves of their home libraries and remembered how much 'the boys' had liked those books when they were sick. So one of these librarians went to the superintendents of the six general hospitals in his city and offered to start a 'drive' for permanent collections of books for each hospital, lend books from the public library, and provide a hospital librarian from his staff who would visit the wards and carry books to the bed patients. Every one was enthusiastic, six book wagons of the A. L. A. pattern were bought, and Sioux City became the proud pioneer in the new type of 'group' library administration whereby the hospital and the public library combine to furnish books to patients. Many other cities and towns have followed this plan with satisfactory results.

"As the value of hospital libraries is now fully acknowledged, their future seems assured. The superintendent of one general hospital remarked: 'These libraries are wonderful things for the patients. We doctors used to think that when we had performed a successful operation our duty was ended. If the patient died of homesickness after it, that was none of our concern. We knew that a contented mind was half the battle, but we took little pains to make him contented. Now we have learned that the hospital must look after the mental health of a patient during convalescence, and we have learned that wholesome books do more than almost any other one thing to keep him happy and help him get well.'

"The war experience taught librarians many things, but the fundamentals as formulated by McLean Hospital long before the war remain unchanged. We still insist that the books must be wholesome and interesting. We see more clearly than ever that hospitals must provide proper books for nurses and em-

MAN'S SENSELESS GARB

THE HABILIMENTS OF MAN are spoken of as "more sensible" than those of his wife, sisters and daughters. Not so, concludes a contributor to *The Nation's Health* (Chicago). As quoted in *Bradstreet's* (New

IN A U. S. VETERANS' HOSPITAL AT CAMP TRAVIS, TEXAS.

"We have learned that the hospital must look after the mental health of a patient during convalescence."

York), he believes that the clothing worn by the average male in the temperate zone contributes not a little to the bad ventilation of the body, and by reason of its many constrictions, reduces the exercise of the musculature very considerably. He goes on:

"The feet are incased in stockings which hold both heat and moisture, and over this layer are shoes made of leather and canvas, and rendered almost watertight by an outer coating of wax or enamel. They bind the feet to deformity and the muscles are atrophied by non-use. The leg is constricted by stocking and garter, outside which is a pair of trousers which bind the knees, thighs and hips.

"The thighs are incased in drawers which may extend to the ankles, binding calves and knees still more, and tightly buttoned over the hips and around the waist. In the case of breeches, motion is still further restricted by their being buttoned from the knee downward, and this is accentuated by puttees, either of stiff, unyielding leather, or a bandage of wool tightly applied. Trousers or breeches tightly encircle the waist, and to make sure that the abdominal muscles shall be thoroughly crippled a

belt of leather or non-elastic cloth is worn.

"An undershirt of cotton or wool envelops the body from the neck almost to the knees, and perhaps from the shoulders to the wrists. It may interfere with respiration, and over it is a shirt with constricting bands of stiffly starched cloth which binds the neck and wrist. In the case of the dress-shirt, a cuirass-like plate extends downward.

"A stiffly starched collar which impedes the use of the muscles

THE BEAUTIFUL LIBRARY OF McLEAN HOSPITAL, WAVERLY, MASS.

"We have learned that wholesome books keep the patient happy and help him get well."

ployees in order to keep up the morale. And most emphatically we stress the need of experienced librarians to organize and operate these libraries. We know, too, that the most efficient librarian in the world can do little unless she has the hearty support of superintendent and trustees and definite funds at her disposal for the books she wants. Books are her tools. Give her these and she can build a library which will be one of the best therapeutic agents in the hospital."

of the neck, and a necktie of no imaginable use whatsoever, top off the shirt. A snug vest of cotton or wool tightly clinches the thorax, only to be covered by a coat which restricts the shoulders, arms and trunk.

"Add to this a heavy overcoat or raincoat, and a hat which tightly encircles the cranium, and the costume is complete, unless a cane, which is necessary in order that this poor beswaddled male may walk, be included.

"If industrial hygiene has brought forth one incontrovertible fact, it is that there is a direct relationship between the ventilation of the workroom and the efficiency of the worker. Physiologists have determined that the reason that moist warm temperatures reduce efficiency is because of the difficulty in those situations in which the atmosphere is stagnant. Conversely, those who live and work in an environment approaching that of the outside air are not only more useful workers, but they also lead longer, healthier lives.

"The reason is not far to seek. Man gets rid of his excess heat by perspiring, and this physiological process is as necessary to his well-being as is panting to that of a dog. Unless this perspiration is evaporated and heat-loss produced thereby, he is surrounded by an envelop of moist air, an excellent non-conductor of heat, and, in consequence, a greater or lesser degree of heat prostration results. Thus many of the ill-defined ailments observed in certain trades are nothing in the world but chronic heat poisoning.

"These facts are well recognized, and factory laws in general require that workshops shall be well ventilated.

"It is curious that this principle has not been more generally applied to the clothing of man, i.e., that steps have not been taken looking to the improvement of the body of the individual.

"Man possesses enormous powers of resisting cold; yet there seems to be a deep-rooted antagonism to working and living in a temperature much below 68 degrees Fahrenheit. We are taught from childhood to be afraid of taking 'cold,' but it would be far more logical to teach the danger of taking 'heat.' The modern house is so constructed that it almost duplicates the climatic conditions of the shady tropics, and out-of-door games and other artificial exercises are necessary to keep healthy a body which normally should be maintained by the struggle to obtain food.

"Women have displayed far more intelligence in reforming their clothing along hygienic lines. A man's clothes average about nine pounds in weight, a woman's usually less than five, and it is a well-known fact that a girl in an evening gown can dance a man in a dress suit to death."

The solution lies, of course, in the reform of men's clothing. The innumerable failures to reform women's dress by direct methods and the accomplishments of fashion to that end point out a general line of attempting this, the writer thinks. Improvements in female garb were not too difficult to produce because the fashion of women's dress is in a constant state of mutation, and if a woman can be shown that a certain thing is stylish, she will eagerly adopt it.

"Not so with man. He fatuously cleaves to the necktie, a vestigial remnant of the Middle Ages; he demands a ribbon for his hat for no other reason than the floppy headgear of Louis XIV was liable to be blown off; buttons which once supported a sword belt still adorn the back of the cutaway of the disarmament era, and three or four buttons at the cuff are the fossilized relics of the days when men used to roll up their sleeves. Men cling conservatively to uncomfortable, unhygienic garments, and they will stiff-neckedly resist a change unless there is a subtle appeal to their vanity.

"Changes are coming slowly; underwear is being improved; the soft collar and the sports shirt are steps in the right direction; the war popularized a shoe which somewhat approaches the shape of the foot, but, unfortunately, there remain to be worn out a lot of puttees.

"It still is impolite for a man to appear in his shirtsleeves; walking without a hat is frowned upon, and the man who attempted to traverse Fifth Avenue in really hygienic clothing would continue his journey in a patrol wagon. Yes, the ideal is still a long way off.

"A pair of sandals and a loincloth would be about right, but, as Carlyle has pointed out, such a garb would detract from the dignity of the courts, so it must be said that the one-piece dungaree which automobile mechanics wear is about the best to which we have attained at this stage of our sartorial development."

CABBAGE COMING BACK

CORNERED BEEF AND CABBAGE are not necessarily an inflexible combination, we are told by Jessie A. Knox, writing in *The Forecast* (New York). As an article of diet cabbage may be served in dozens of ways acceptably, thanks to modern methods of cooking, which are restoring this vegetable to its ancient place in popular favor.

The translucent, delicately flavored, succulent vegetable served with butter or cream sauce which the expert cook produces from the common head of cabbage bears little resemblance, Miss Knox says, to the dank mass of dark vegetable fiber which is often served with corned beef after the two have been boiled together for three hours or more. She continues:

"Cabbage is delicious and fit to set before the king when it is properly treated, but unfortunately, many a culinary crime has been committed against it and it is not easy to live down the evil reputation that the innocent vegetable has unjustly gained. It is the victim of bad cooking.

"This vegetable, of which there are about seventy varieties, all told, belongs to the mustard family and contains a volatile oil that is rich in sulfur and hydrogen and that is driven off by careless cooking. The odor of sulfur and hydrogen in combination is strong and penetrating and lingers long, and for this reason, improperly cooked cabbage not only makes its presence objectionable, but it loses its color and flavor, is hard to digest and really unfit for food.

"Modern methods of cooking have done much to put cabbage back in the diet, and experiments in feeding animals as well as humans have shown that it deserves a high place on the family food list. So far as proteins, fats and carbohydrates are concerned, the cabbage is worth very little. Its great value as a food lies in its ability to supply bulk to the intestines, for the indigestible residue acts as a stimulus to intestinal movement and helps in correcting constipation; in its mineral salts, especially potash and iron; in the fact that it has an alkaline reaction and so helps in correcting an overacid condition; and in its supply of vitamins B and C, or the antineuritic and antiscorbutic vitamins.

"Brussels sprouts, broccoli, kale and kohlrabi all properly belong to the cabbage tribe, but in speaking of cabbage, the solid head-cabbage in early or late varieties is usually meant. Fresh, firm cabbage that is white or good green in color—according to the kind—is the easiest to digest and the most desirable to use. Raw cabbage is, as a rule, easier of digestion than the cooked, tho if it is properly cooked, there is very little difference in the digestibility. However, in cooking, the antiscorbutic vitamin C is destroyed to a large extent, tho vitamin B is unchanged. Raw cabbage can be served in a number of ways, and if finely chopped or shredded makes a delightful winter salad and should be used several times a week to insure good health and proper elimination. It has been proven that if in feeding hens raw cabbage is included in the ration there is an improvement in the egg-production, general health and growth. Graham Lusk, addressing a food conservation meeting during the war, finished the list of available war foods with an emphatic 'And we must not forget the cabbage.'

"To cook cabbage properly, cut it in quarters, remove the core and soak the cabbage for at least half an hour in cold water. Drain, cut in small pieces and cover with boiling water. Boil rapidly in an uncovered saucepan for fifteen minutes, add salt—one tablespoonful to a medium-sized cabbage—and continue cooking for ten minutes or until the cabbage is tender. Drain, chop and season with salt, pepper and butter. The cabbage, cooked in this way, will be white, delicate in flavor and texture and easy of digestion. There will be no objectionable odor in the house, as is the case when the pan is covered and the cabbage cooked an hour or so. Long cooking darkens it or sometimes turns it pink and nearly always develops a bitter or strong flavor. The vegetable may be shredded or put through a meat chopper and cooked for ten minutes, when it will be found to be tender and delicate in flavor. This method, however, causes a large loss of the mineral salts and is not recommended as a general rule.

"There is no need for the family to tire of cabbage as a vegetable or salad, as there are many combinations and methods of serving that can be used. Cabbage purces, puffs, rolls, stuffed cabbage, the many varieties of salads and relishes, stewed cabbage, cabbage au gratin; all these give the housekeeper no excuse for omitting cabbage from her bill-of-fare on the plea that her family tires of it if she serves it often."

RADIO • DEPARTMENT

RADIO IN A SUIT-CASE

THERE IS AN ELEMENT of the neeromantic about radio receiving under any circumstances; but this perhaps reaches its climax when the receiving apparatus is dissociated from an outside aerial. People are in a way prepared to accept as a natural phenomenon the reception of messages by a visible and tangible wire stretched high in air, but when there is no such apparatus in question, the message being intercepted by a little loop aerial that stands on a table, the thing seems utterly mysterious. Even thoroughly intelligent people have been known to inquire whether it is not necessary to open the window; and to express incredulity when assured that the electro-magnetic waves are no respecters of walls.

Mystery reaches a climax when no aerial of any kind is visible. A Washington inventor has produced a radio receiving outfit that meets this condition. A good many amateurs will probably feel that his suit-case radio receiver, as described in *Radio News* (New York) is precisely the apparatus they have been looking for. Here is the description:

"A portable radio receiving set, completely installed in an ordinary suit-case, capable of 'picking-up' a wireless broadcasting service 250 miles away, represents perhaps the most compact outfit for its capacity yet built. The device was perfected by Brent Daniel, of Washington, D. C.

"The first station heard after the compactly built wireless receiving unit was put into operation was one in New York City. A station in Newark, New Jersey, was also heard. An amateur station in Ohio—approximately 400 miles away—was noted with faint audibility. The signal strength at these distances, to be sure, is not great. When the transmitting station is located only 10 or 15 miles away, this diminutive wireless receiver imparts sufficient strength to be distinctly heard over a large room.

"This portable amplifying receiver operates in the absence of an antenna. A loop is used, this unit as well as all other parts of the outfit being enclosed in a common suit-case. The use of a loud speaker or amplifier is the secret of the large capacity of this radio outfit when compared to its size. The inventor describes his progeny as supersensitive.

"The containing suit-case weighs barely 40 pounds. The electron tubes, loop, amplifier, and other intricacies essential to a complete radio receiving set are bound between a case of leather not exceeding 14 inches by 22 inches in dimensions. The success of this portable amplifying receiver is due in no small measure to the use of a special design of electron tube, which makes it possible to use two dry-cell batteries in supplying filament current.

"Five stages of amplification are in force—three of radio, two of audio, and a detector. By the use of tuned radio-frequency transformers, extreme sensitivity is insured. The amplifier consists of the following elements: Six electron tubes of special design with sockets; two filament rheostats for controlling filament temperatures; a stabilizer for adjusting the outfit to maximum sensitivity; a tuning condenser for adjustment to the wave-length of radiotelephone transmitter, and dry-cell batteries supplying filament current; 'B' batteries for affording plate voltage; three tuned radio-frequency transformers, grid leak and condenser, and two audi-frequency transformers.

"Another feature of this portable amplifying receiver is its capacity to locate the radio-transmitting station, the coil in the leather container having directional powers. Similarly, indicative of its variable uses, a plug may be arranged on the suit-case that a telephone receiver may be connected in place of the amplification horn. Thereby, when held in front of a Bell telephone land-line transmitter, conversation may be relayed to a friend at some distant point. Practical experiments have included a realization of this innovation. When related to the amplifying equipment, the small amount of energy 'picked-up' by the receiving loop is so enlarged in volume that conversation or music may be heard in any part of an ordinary room."

It appears that Mr. Daniel is by no means the only radio enthusiast who has made practical application of the suit-case idea. Another Washingtonian, Mr. F. W. Dunmore, of the U. S. Bureau of Standards, has a similar outfit, with which he is reported to have astonished the guests in the lobby of a Chicago hotel, who were for a time at a loss to know the origin of the market reports, grand opera selections, and the like that appeared to come from nowhere in particular, but were finally traced to the moderate-sized bag that the radio expert was carrying.

Yet another suit-case radio receiver is reported by Mr. Robert E. Lacault, who gives full details of its construction in *Science and Invention* (New York). The building of such a radio frequency amplifier as is necessary in order that the small loop antenna may bring the desired messages is hardly the work for a tyro; but doubtless there are many amateurs who will wish to try their hand at making such a portable outfit as Mr. Lacault describes. The circuit diagram on page 25 shows a relatively simple construction, which any one who has had a little practise in the making of vacuum-tube outfits may readily follow.

Mr. Lacault declares that no real radio fan can conceive of a vacation without his radio set; and he gives assurance that the portable one he describes, using only a folding loop antenna, covers waves from 180 to 500 meters, and has a wider range than might be expected, because of the regenerative effect attained by means of the variometer connected in the plate-circuit of the first amplifier tube. Here are details of the outfit.

"The amplifier comprises two stages of radio frequency, one using iron core transformers, such as may now be obtained in any radio shop. In order to save space and weight, small vacuum tubes are used. These require four volts on the filament supplied by means of a small storage battery having the electrolyte rendered unspillable by the addition of proper absorbents, glass wool, etc. Such small batteries are used in medical apparatus and in portable lamps. In case one prefers to use dry cells, he may do so by mounting four standard dry cells in the 'A' battery compartment of the cabinet, to furnish the necessary filament current for the tubes. The plate voltage is obtained from two 22½ volt 'B' batteries of small size.

"Figs. 1, A, B, C show the front panel, and a sectional as well as a top view of the cabinet, with the various parts composing

MR. DANIEL'S OUTFIT.

Aerial and everything are in the suit-case. He can hear distinctly ten or fifteen miles, and faintly up to 400.

the receiving set and the amplifier. On the top of the panel are the three tubes, and below may be seen the knobs of the rheostat and potentiometer. The two dials are those of the variable condenser and the variometer. The radio frequency transformer, grid leak and grid condenser, as well as the coupling condenser are mounted on the back of the panel and also on the top of the cabinet. The special compartments for the 'A' and 'B' batteries are screwed through the sides of the cabinet, and should be so fixed as to exactly accommodate the battery to be used. The

both, insuring the proper spacing for the screws. The paper may then be removed and the rheostats, condenser and other instruments mounted and wired. No dimensions are given in the sketch showing the set, as this depends upon the particular suitcase in which receiver is to be installed. If desired, the set may be built as a separate unit enclosed in a cabinet with a handle for transportation.

"In conclusion, I would say that with such a receiver, signals from amateur stations about 200 miles distant have been received quite often, while radiophone transmissions from broadcasting stations have been picked up quite clearly at a distance of almost 100 miles.

"Where the experimenter may wish to use an ordinary aerial instead of a loop, he will of course gain greatly in the range over which he can receive. An aerial 100 feet long comprising one or two wires will give best results with this set. A piece of fine magnet wire will do for a temporary aerial, tying a string to one end of it, and a stone or other weight to the free end of the string. The stone is then thrown over a high tree limb, carrying the string with it, and the aerial wire can then be pulled taut. Insulators, such as a porcelain cleat or two, should be placed between the cord and antenna wire. The lower end of the antenna may be connected directly to the receiving set, or else be anchored with an insulator to a peg or other object. A fine wire dropt out of a hotel window would also serve as a temporary aerial, using a steam or water pipe for a ground connection."

RADIO AND PUBLIC INFORMATION

IT IS INTERESTING ALWAYS to get the opinions and estimates of an expert who has been called upon to give much thought to an important subject. Such an estimate of the value of radio broadcasting is given by Mr. M. P. Rice, Manager of the General Electric Company's Station at Schenectady. In *The Globe* (New York), we read:

"The telephone has not supplanted the telegraph, and radio is not likely to supplant either. It is already in general use for transoceanic communication, and this application will be extended, but radio will not under present conditions supersede the telegraph or telephone, for obvious reasons. Broadcasting the morning order for groceries or a chat with an intimate friend might be more entertaining than practicable.

"The great publicity field for radio is the broadcasting of information or entertainment designed to reach large numbers. If the matter is of universal interest and importance it would be radiated from a few suitably located stations of great power. Matter of more local interest would be broadcasted from less powerful stations, which would be installed at suitable intervals throughout the land.

"National news would be broadcasted from the few powerful stations, and local news from the numerous local stations. The President of the United States might address the entire population from a high-powered central station; the Governor of the State of New York might address the people of the State through a local station. The message in either case would reach instantly localities not reached by telephone, telegraph, post-office, or newspaper.

"The distribution of music and other forms of entertainment, and the broadcasting of educational and religious programs will undoubtedly develop along similar lines.

"Ten thousand individuals could probably not be found who would be willing to read consecutively every page of the same newspaper or magazine, and it is not reasonable to suppose that the radio audience will all want the same program at the same time. Therefore, an assortment of wave-lengths will be provided—one for market and weather reports, one for financial reports, and others for local news, for advertising, for concert music, for dancing, for educational programs, for church services, and for theatrical productions.

"Radio will exert a powerful influence on the press, the pulpit, the schools, and the theater, but it will not supplant them. Public taste will be educated, and it will be more critical. It will demand higher standards. There will be a beneficial evolution of press, pulpit, school and theater, in which the inferior and the mediocre will be eliminated.

"Radio broadcasting carries with it responsibility. It is to be hoped and expected that the power to say something loud enough to be heard by thousands will give rise to a desire to say something worth while, and to say it well."

Copyrighted by Underwood and Underwood.

"THE SINGING SUIT-CASE."

Mr. F. W. Dunmore and his handy traveling set. While attending a conference of the American Institute of Engineers in a Chicago hotel, Mr. Dunmore walked around the lobby with suitcase in hand. Notes from an opera, stock market reports and news of the day soon started to come from a slit in the valise, which is about one-third the size of an average grip, and mystified every one until explained.

whole outfit which is 5½ inches wide, takes little room in the suit-case, which may be used also to carry clothes and other necessary accessories of every vacationist.

"As may be seen in the diagram, no filament rheostat is used for the amplifier tubes, as this is not necessary with the type of tube used: a potentiometer regulates the potential applied on the grids through the loop winding. The rheostat for the detector tube is not absolutely necessary, altho it sometimes improves the reception. The variometer used in the plate circuit of the first tube is a standard one, which if built by the amateur himself should have 50 turns on the rotor and 50 on the stator and No. 22 wire should be used for this winding. In order to save space on the panel the mountings for the Myers tubes were removed from the standard socket and fixed upon the panel itself.

"In the other diagram are shown the various parts of the set with the values of the condensers and other elements. Two stages of radio frequency amplification are used before the detector, providing great sensitiveness, and sometimes giving better results with the loop aerial than are obtainable with an outdoor antenna and regular regenerative set. Of course the intensity of the signals heard in the telephone is not as strong as if two steps of audio frequency amplification were added after the detector, without any radio frequency amplification before, but the range obtainable in the second case is much more limited than in the first.

"When building the set it will be found that the easiest way to make the 'layout' of the panel is to first trace on a piece of paper the dimensions and spaces of the various parts and positions of the screws. This paper may then be stretched and fixed over the bakelite panel, and the various holes drilled through

THE CURIOUS LITTLE GRID LEAK

ONE OF THE ODDEST STRUCTURES in the radio receiving outfit is the small but highly important thing called a grid leak, the function of which is to permit the escape—but not too readily—of charges of negative electricity that accumulate on the grid of the detector vacuum tube because of the unidirectional flow of current incident to the function of “detection.” If the negative charges accumulate too much on the grid, the flow of current in the plate circuit is reduced or even stopt altogether; so the grid leak, which permits the escape of the negative charges, performs a highly important function.

As purchased at the supply store, the grid leak is a little filament of carbon in a glass tube; but the equivalent of this instrument may be constructed at home very readily. Just how this is done is explained in an article in the *Sunday Call* (Newark), as follows:

“Cut a piece of cardboard about two inches long and about half an inch wide, or just the size of the grid condenser. If the grid condenser is used, make the cardboard just as long as the condenser so that the two binding-posts will pass through the holes in the condenser and hold down the cardboard. Under each binding-post rub off some of the pencil carbon so that when the binding-posts are tightened down some of the pencil mark will show around the edge of the post.

“Do this on both ends of the cardboard so that there will be contact enough for a pencil mark across the cardboard between the two binding-posts.

“Turn on the tube filament and adjust the set. If a point is reached where the adjustment will cause a loud howling, or the signal tuned in is not clear, start rubbing the pencil back and forth between the binding-posts until the howling just stops or the signal is made clear.

“If there is too much pencil carbon and the set appears dead, simply erase the marks and start all over again until the proper resistance is reached. The grid leak resistance need not be changed unless a different tube is inserted in the socket. Sometimes the grid leak made in this manner may be covered in hot paraffin so as to exclude moisture and it will remain in permanent adjustment.

“Another method of making a grid leak is to soak a small piece of blotting-paper in drawing ink and dry it thoroughly. Then pass two binding-posts through the ends as with the other type mentioned above. A blotter inked in this manner cut down to $\frac{1}{2}$ inch wide and 2 inches long will save a resistance of approximately one megohm, and is suited for the majority of tubes. However, the adjustable leak is to be preferred, for critical and efficient adjustment.”

PERSPECTIVE DIAGRAM SHOWING ALL CONNECTIONS

Of the various radio instruments used in the vacation-time receiving set described on the opposite page by Mr. Lacault. This set utilizes a small loop aerial, this loop being shunted by a variable condenser for tuning to different wave-lengths. The amplifier comprises two stages of radio frequency, with a radio frequency transformer connected as indicated in the diagram. Three vacuum tubes are used. These operate on four volts filament potential, which may be supplied by a two-cell storage battery or else dry cells. The phones used should have 2,000 to 3,000 ohms total resistance for the set.

FRONT, SIDE AND PLAN VIEWS OF THE SUIT-CASE RECEIVING SET.

RADIO AND THE FARM BOY—An editorial in the *Nebraska Farmer* (Lincoln) emphasizes the practical value of the receiving radiophone, pointing out that it is likely to be of greater importance, for the farmer in particular, than any other invention since the automobile. “The radiophone,” it declares, “promises to bring actually to the home of the farmer or the city man, faster than by any other means, the news of the day, the markets for farm products, and the entertainments of the highest order from distant cities.” And then there is this suggestive comment: “For what reason, you might ask, would the farm boy or girl want to leave the farm for the city with such attractions as these in their homes?”

After stating that the small boy had a good deal to do with the development of the radiophone, because of his natural curiosity and love of experimentation, the editor cites a personal experience which suggests that the youth of Nebraska are missing no tricks in the radio line. Says the editor:

“We inspected a combination radio and wireless receiving and sending station in the home of a Lincoln resident recently. The two boys in the family, with the help of their father, have installed the apparatus, and with the key, that is the telegraph code, they have been able to communicate with every State in the Union. Through the radiophone they have heard clearly concerts from Detroit, and Pennsylvania cities, and other distant points. On one occasion their voices were heard at a point nearly 1,000 miles away.”

DARWIN

GLADSTONE

NEWMAN

BURNE-JONES

MAGNIFICENT TYPES OF THE HUMAN COUNTENANCE OF THE NINETEENTH CENTURY.

Dean Inge maintains that just for faces we produce nothing in this century to compare with them.

ENGLAND'S PASSING GLORY

SET IN A ROW the portraits of Tennyson, Darwin, Gladstone, Manning, Newman, Martineau, Burne-Jones and put alongside men of the twentieth century in similar walks—and what do you get? Dean Inge declares that the present comes off worsted. He told his hearers in the Rede lecture at Cambridge, England, on May 9, that England had reached the highest point of all her glory and might compose herself to “haste now to her setting.” Without actually quoting Wolsey he was quite as pessimistic. He extolled the Victorians for looks and achievement: “Since the golden age of Greece no age could boast so many magnificent types of the human countenance as the reign of Queen Victoria,” he declares, and the work of these men, he believes, far overshadowed the accomplishments of men of to-day. Since Mr. Asquith delivered his university address in 1916 it has seemed to be the fashion in England to revert to the Victorians as examples of the favored times and peoples. “The most wonderful century in human history,” Dean Inge styled the era beginning with the Industrial Revolution. He agrees with Lecky that “no country was ever better governed than England between 1832 and 1867.” Some other parts of his lecture are reported in the *Manchester Guardian*, which we have turned into “direct discourse”:

“The prosperity and security of the time, he declares, were due to temporary causes which can never recur. In the nineteenth century England was the most fortunately situated country, geographically, in the world. An Atlantic stage of world-commerce began in which England was in the most favorable position. The Pacific stage, which is now beginning, must inevitably give the primacy to America. ‘Henceforth we shall have to compete with other nations on unprivileged conditions,’ added the Dean. ‘It is useless to lament the inevitable, but it is foolish to shut our eyes to it. The Victorian Age was the culminating point of our prosperity.’

“Tennyson, says the Dean, was the grandest and most fully representative figure in all Victorian literature. ‘Let those who are disposed to follow the present evil fashion of disparaging the great Victorians make a collection of their heads in photographs and engravings, and compare them with those of their own little favorites. Let them set up in a row good portraits of Tennyson, Charles Darwin, Gladstone, Manning, Newman, Martineau, Lord Lawrence, Burne-Jones, and, if they like, a dozen lesser luminaries, and ask themselves candidly whether men of this stature are any longer among us.’ . . .

“The longevity and unimpaired freshness of the great Victorians has no parallel in history, except in ancient Greece. Tennyson is now depreciated for many reasons. A generation which will not buy a novel unless it contains some scabrous story of adultery, and revels in the ‘realism’ of the man with a muck-rake, naturally has no use for the ‘Idylls of the King,’ and calls Arthur the blameless prig.

“It was not a happy time for religious thinkers, unless they made themselves quite independent of organized Christianity. Intolerance was very bitter; and only the secular arm stopt a whole series of ecclesiastical prosecutions, which would have made the ministry of the Church of England impossible except for fools, liars, and bigots. Real hatred was shown against the scientific leaders. It might be doubted, however, whether organized Christianity had ever been more influential in England.”

The palmiest day of the novel, according to Dean Inge, “was in the fifties, compared with which we are now in the trough of the wave.” The main cause of the decay, he believes, is “the pernicious habit of writing hastily for money.” The Dean’s conclusion is startling:

“I have no doubt, that the Elizabethan and the Victorian ages will appear to the historians of the future as the twin peaks in which English civilization culminated. The twentieth century will doubtless be full of interest, and may even develop some elements of greatness. But as regards the fortunes of this country, the signs are that our work on a grand scale, with the whole world as our stage, is probably nearing its end. Europe has sacrificed its last fifty years of primacy by an insane and suicidal struggle. America has emerged as the *tertius gaudens*. Where shall we be thirty years hence?”

It goes without saying that the English press does not accept all these buffets lying down. Some papers, like the *Westminster Gazette*, find truth in his words, but refuse to be wholly discouraged. It writes:

“It is not the first time that such a decline has been seen. The Elizabethans came long before the Victorians; and even in this world of rapid development there may yet be a third great era to bring back to us the old ideals.”

The Times admits the “Victorians,” but declares that “We can not go back to them and to their models in the same spirit as the Germans or elements in Germany, to judge by recent manifestations, are going back for comfort to the great minds which

raised their country out of prostration more than a hundred years ago."

The Manchester *Guardian* sees the matter as a question of youth. "If your youth was a Victorian's youth, why try to pretend that you think the bloom could possibly be on the rye after Victoria died?" It calls Dean Inge's lecture "a real cry from the heart of chronological loyalty." Going on:

"To be alive in the Victorian prime, he feels, was happiness: to have been young in it, we readily perceive, was very heaven. Look at his lecture.

"What is going to be said about the Victorian age when the jury will not consist either of loving and hard-bitten survivors from its spacious calms or of the uppish children of this later world? We fear it will hardly be settled by Dr. Inge's suggested expedient of setting up, on one side, photographs of Tennyson, Gladstone, Martineau, Manning, and other notoriously good-looking Victorians, and, on the other side, photographs of their twentieth-

century counterparts. We doubt the validity of this 'handsome does that handsome is' theory. Goldsmith, who beat all the Victorians, was nothing to look at. And just think of Socrates. Dare we even say that Darwin was not an Adonis? Much safer ground for the Victorian faction would be the 'excellent seriousness,' as Matthew Arnold translated it from the Greek, of all their great champions. For better, as well as for worse, they all took themselves enormously seriously. The moral pressure in the private correspondence of Gladstone, Tennyson, Ruskin, Carlyle, indeed of all the typical figures, was immense and unashamed. Common to them all, in all their researches, arts, and administrative labors, was an absolute, undoubting conviction of the perfectibility of their world and of their own commission to get on with the work. This habitual assumption of a call to themselves and of an obligation to respond strenuously had its assailable aspects. Its prevalence imposed upon many weaker brethren an effort of conformity above their strength, with results that were meat and drink to satirists. . . .

"One thing, which they could not help, has told against the Victorians heavily. Just at the close of their time the well-to-do world, to which they had all conspicuously belonged, became uneasily aware of seismic movements in the solid-seeming social earth which they and their time had, on the whole, understood to have cooled and caked for good. The pioneer investigations of Charles Booth, soon to be followed by a new birth of political economy and social theory, spread throughout the thinking members of all classes a feeling that the kind of social stability which the Victorians generally had taken for granted was really no stability at all. The Victorians, as a body, were seen to have assumed too much, and ignored too much, intelligent and earnest as they were. The new discovery of unbearable evils which our accepted economic

system had permitted, or even glossed over, gave the Victorian period a damaging appearance of complacency in the midst of suffering. Hood's 'Song of the Shirt,' Kingsley's 'Alton Locke' had stood too much alone. The Victorian culture, rich and splendid in so many ways, stood in a position too much like that of a culture even more splendid and rich,

the one which the Athenians built up on a substructure of slavery."

We ought, perhaps, to allow the last word to the younger generation, and their spokesman, par excellence, is Hesketh Pearson in *John Bull* (London), now entirely divorced from the influence of Mr. Bottomly:

"The fact that we not only endure but encourage Dean Inge speaks volumes for us. Our fathers weren't anything like so kind to Samuel Butler, who was an infinitely bigger man. A generation that gave the cold shoulder to Hardy, Meredith and Swinburne has very little to brag about. We have welcomed all three to our hearts, and we remain charmingly modest about it.

"Dean Inge has the typical pulpit outlook on life, but unfortunately he refuses to remain in the pulpit. Tho he clings tenaciously to the obsolete ideals of one class, he repeatedly confuses the issue between all classes by rushing into the arena and breaking a lance with each in turn. . . .

"The truth is that he hasn't an open mind, and, like all folk of a similar type, he loves ramming his opinions down other people's throats. Nothing could illustrate his curious limitations better than a remark he made in his recent lecture:

"Let those who are disposed to follow the present evil fashion of disparaging the great Victorians,' he said, 'make a collection of their heads in photographs or engravings and compare them with those of their own little favorites.'

"Note the calm assumption of superiority in the use he makes of the last four words. A kindly pat on the back for every one who doesn't share his opinion. 'Their own little favorites!' Just think of it for a moment, and then meekly admit that the Victorians easily surpass us in the noble art of self-exaltation.

"As a matter of fact, the men of to-day are more interested in progress than in profiles. Nor have we any illusions left as to the quality of that greatness which led us to those years of (dare I say it?) almost Victorian sublimity—1914 to 1918.

"Perhaps the reverend gentleman thinks that, if for nothing else, we ought to be truly grateful to an age that forced heroism upon us. If so, I salute him—not as the 'melancholy Dean,' but as the High Priest of comedians. . . .

"He has been called courageous, but he has no more courage than the man who stands at the street corner every Sunday and says repeatedly: 'There is no God.' It is just possible the authorities are annoyed that they ever made him Dean of St. Paul's; but now that he is Dean, he can say and do practically anything he likes short of a flat contradiction of the Thirty-nine Articles from the altar steps.

"What is called his courage is simply pig-headedness. He quickly makes up his mind on every subject brought to his notice, and nothing will make him shift his position one iota. His reason is wholly at the mercy of his caste prejudices, while his classical training is entirely responsible for his pedantry. . . .

"So much has been said of late about the Victorian Age that it was only to be expected that Dean Inge would add his voice to the general hubbub of contending parties. It was only natural, too, that he should speak in support of an age which nourished his own peculiar prejudices."

HARVARD "TALK" ABOUT JEWS

THERE HAS BEEN "TALK about the proportion of Jews at Harvard." Such a phrase used in the report of a meeting of the Board of Overseers called together to consider the question of limiting the entering class, has caused a wide newspaper discussion. The official statement of the Board contained no such reference. It recorded the formation of a committee "to consider and report to the Governing Board principles and method for more effective sifting of candidates for admission," and President Lowell has dismissed the charge, of intended discrimination as "idle rumor." Harvard, he is reported to have said, will remain "in the future as it has been in the past, a great university for all the people, based upon fundamental principles of great service to the community." The remark from which the offense cometh seems to have been hardly more than that the subject was being "talked about" by students and possibly by alumni and faculty, says the *Springfield Republican*, but—

"The question is now being 'talked about' the country over, and Representative Webster of Boxford saw fit to introduce in the Legislature a resolution calling for investigation of the 'alleged or proposed discrimination.' This was needless, for the university has done no more, as President Lowell assured Speaker Young yesterday, than authorize a study of the question of 'more effectively sifting candidates for admission.'"

The *Providence News* criticizes the Harvard authorities because the denial has not been made "in plain English" so that the country may "know that there has been misconception of an unfortunate clause in the announcement made by the college authorities":

"Up to this moment the men who control the management have been dodging a clear answer to a very important query, and their course naturally excites the distrust not only of the Jewish race but of all Americans who despise narrow citizenship.

"Harvard has been known for some of the Chinese and Japanese it has sent brilliantly through graduation courses, and some of the thinking men of far-off Siam owe their broad culture to the fact that the Massachusetts university placed at their disposal every avenue of learning. All the more surprising, therefore, to find President Lowell and his associates now giving evasive replies to the question whether the limitation of the student body is to be carried out by reprisal against a great class of our citizens.

"The proposal that the Massachusetts Legislature should investigate the circumstances leading to the announcement of restricted scholarship should be carried forward, unless there be an honest statement forthcoming by the faculty that in the elimination of applicants there will be no discrimination against any race or religion."

Right at home Harvard is admonished that "there could be no greater mistake than such a narrow policy." It is the *Boston Post* which tells its great institution that "above all things Harvard should stand for democracy in the higher education, and for men for what they are worth, regardless of race, color or antecedents," adding:

"Take the matter of the Jews, for instance: that element of the Harvard undergraduates have done much honor to the university. Their scholastic standing has been notably high. It is credibly stated that in one subject, this year, out of nine honors, eight Jewish students received better than *cum laude*. They do not

ask any favors, but students of such exceptional ability should be welcomed and encouraged.

"The public does not want an aristocratic institution at Cambridge, but a great, broad-spirited university which shall tower above racial and color lines.

"It would be an unfortunate epoch for Harvard and the community generally if any narrow spirit should get control of its policies."

That some sifting process will likely be adopted seems plausible. "Not even the most fervent fomentor of race prejudice

will deny that Harvard may prescribe its own qualifications in so far as learning, character and personality are concerned," says the *New York Tribune*. "So long as these standards are applied without favor, no one may justly protest." Mr. Heywood Broun, with his pleasant insouciance, suspects that Harvard "has some sifting scheme" for limiting the number of Jewish students; and he declares beforehand that he is "entirely out of sympathy with any such plan, whatever its details may be."

"Since we earned no degree from Harvard, we are not speaking as one moved to utterance by his responsibilities as an alumnus. Harvard is, however, a semi-public institution and therefore well within the concern of a meandering newspaper commentator.

"A university ought to take in anybody who can pass the examinations. If space is limited, admission should go to those who stand highest. There should be no other qualification.

"Writing in the *Evening Post*, John Palmer Gavit suggests that the solution of a condition which Harvard feels to be a problem is simple. 'There must be,' he says, 'a composite standard of intelligence and character taken together.'

"We are against that, too. We think that a university which keeps a man out because it doesn't like his character is almost as

benighted as the one which would sift him out because he is a Jew. University examinations are far too fallible as it is. The difficulties of arriving at any working compromise on what is intelligence are hard enough without bringing in the enormously complexed question of character. We suppose, for instance, that a young Bernard Shaw might well flunk a character test and be sent down because of conditions in Reverence. Of course, he might try to brush up on it during the summer months, but we doubt whether he could ever pass.

"A little unscrupulous guessing often prevails even in an old-style test. We once passed an examination in elementary Greek which we had no earthly business to pass. The only words which we knew in the whole passage offered for translation were the Greek equivalents for parasang and river. Unfortunately, we have since forgotten them. Using these two words as fix points, after the manner of a man working with a cipher, we boldly filled in all the remainder and made up what seemed to us a rather convincing story of an ancient walking trip. So much of it happened to be right that the examiner gave us D minus and let us through.

"We have always taken a certain amount of pride in that, but we don't see how anybody could grow puffed up about faking his way through a character test. We don't know just what a character test is like, but we assume that it must bear some resemblance to one of these popular newspaper questionnaires which begin, 'What is your favorite flower?' and end with 'What quality do you admire most in a woman?' The conventional answers are 'The American Beauty rose' and 'Virtue.'"

We must waive responsibility for Mr. Broun's Greek, but will doubtless return to the subject again as it seems likely to involve other colleges besides Harvard, and to call out a still wider newspaper discussion.

THE MELANCHOLY DEAN.

As *John Bull* sees Dean Inge lamenting the decline from Victorian days. His words are to be found on the preceding pages.

BRITISH GOOD-WILL TO AMERICAN BOOKS

SINCLAIR LEWIS SAID A GOOD DEAL about Anglo-American literary relations when he recently returned from his year abroad. Some of it we reproduced in our issue of June 10. Some that we omitted is viewed as splenetic by Solomon Eagle of the *London Outlook*. He refers to it as "this sort of thing, which occurs periodically, and is depressing to anybody who has an affection for both countries and is anxious to promote mutual comprehension." This is Mr. Lewis's paragraph which was cabled over to the *London Times*, and stirs Mr. Eagle's soul, Solomon Eagle, by the way, being Mr. J. C. Squire. Said Mr. Lewis:

"Every young Englishman two years out of Oxford adopts the mother attitude toward writers like Edith Wharton, Joseph Hergesheimer, James Branch Cabell, and Sherwood Anderson, telling them how they should write. It would be sickening if it were not so silly. I have been mothered by young English upstarts until I am pretty weary of it. It is time for us to stop looking to England for anything at all and go our own way, producing what I'm sure will be the finest literature of our time."

Mr. Eagle is among those so obviously eager to promote "mutual comprehension" that he devotes a page to examining Mr. Lewis's statements. His great good-will is apparent even tho he also falls into the kind of statement that causes the squirming on this side. The mutual comprehension is still some days delayed, for we read:

"It is true that no great amount of modern American literature—except of the Wild West and popular love-story kind—is read here. It is especially noticeable that in the department of fiction many books are considered notable in America and do not cross the Atlantic at all, whereas every second-rate novelist we have finds a ready welcome in America. Reasons, I suppose, might be found. A large proportion of the more ambitious of recent American novels are of the documentary kind, books written deliberately not to express universal truth through a local medium, but to exhibit the 'facts' about some particular phase of contemporary American life or some particular region of the States. It may be that curiosity about those things is weaker here than curiosity in America would be about life on the London Stock Exchange or in the coal pits of Durham; that would not be strange, considering how many millions of Americans derive from England and have seen it, and how few Englishmen have been to Ohio. But there are a good many American writers who are read here as much as English writers of corresponding age and type; and of the younger poets (tho there is no reason why we should swallow American verse whole any more than English) Mr. Frost, Mr. Lindsay, Mr. Aiken, have certainly not suffered from a lack of interest among our 'light-minded and complacent critics,' whose desire to judge works of art on their own merits is mistaken by Mr. Lewis as inspired by jealousy. But there is some real grievance. There is a lack of curiosity about American books until they are forced upon our attention."

Mr. Eagle urges his countrymen to travel more in America, and not leave it all to the business man who sees New York and to the few authors who "each year go across with the principal object of engaging in a lucrative lecture tour." He adds that "for one Englishman who has seen the Blue Mountains there are ten thousand Americans who have seen the Cambrian Lakes." The "real moral," however, he maintains, is one that has been too long overlooked:

"It would be a bad thing if critics were to lose their detachment (which does not exclude sympathy) in approaching American books, or any other books. A vast majority of all books, whether American or British, must be negligible in the eyes of a critic who is endeavoring, free from personal or national considerations, to single out those works and those authors that seem to contain promise of permanent appeal, to make the exceptional book known and encourage the exceptional author. This is a valuable function; through its exercise are standards preserved—and there are plenty of journalists who are content to recommend works of a more topical or ephemeral kind which may be good in their way. But it implies a very careful discrimination and seldom allows quite unqualified praise. I can not conceive that anybody in his senses here has ever 'mothered'

Mrs. Wharton or Mr. Hergesheimer; they are not what they are as Americans but as human beings who happen to live in America, and who write good books in the tongue which we share with America. Defects in their books will be noted; but so are defects in Mr. Conrad's; I confess I have never noticed any discrimination. When Mr. Sherwood Anderson writes in dialect he naturally risks losing part of his public here; so did the poet Barnes when he chose to write—very beautifully—in the dialect of Dorset. Personally, I generally regret it if good writers favor dialect; but the man would be a fool who should dismiss them as no good on that account. We do not want a bias in favor of American books, or any weakening of the critical attitude, especially toward novelists, of both countries, whose wide immediate appeal often encourages loose panegyric as it is. What is needed is that we should watch America more closely, which involves knowing America better, which involves going there."

OUR BUILDINGS AN EXAMPLE TO EUROPE

THAT ARCHITECTURE IS A CIVIC ART and that American architects apprehend this as its mission seems to be the impression derived from an exhibition of American architectural designs held in Manchester, England. This view is impressed by a writer for the *Guardian* of that city, who urges the people of Manchester to go and see the show. "We have been told for a long time that the buildings of the United States are the finest in the modern world," he writes; "here, in evidence of the existence of so many fine buildings consistent in style with one another, is proof of the statement." We read:

"Individuals or groups of people—bankers, manufacturers, railway companies, religious bodies, private householders—who put up buildings without regard to their effect in relation to their surroundings, are really bad citizens. And the worst architecture—that of the middle nineteenth century—belongs to the time when it was thought that people could enjoy art without any obligations toward their neighbors. The most individualist of the arts, that of the painter, almost monopolized interest. A man might have fine pictures in an ugly house surrounded by a very high wall.

"The community, of course, has a reciprocal obligation. It should ensure, far more effectively than it has done in Manchester, for example, that fine buildings should have good sites. Then still finer buildings would be put up. The American architectural photographs, even those which illustrate private houses, seem to show a heartier sense than we have yet developed of public relationship, a greater realization of the fact that every building is part of the public life of the community as well as of the private life of those who live or work in it. And the co-operation that this induces between clients, architects, and the public at large—a subordination of individual whims to the general good—has always been one of the factors making for fine architecture. This cooperation has been made more effective in America, so far as public buildings are concerned, by a general consistency of style. In this the Americans seem to have been more successful than most European groups of architects. Their inspiration has come from Europe, it is true, but distance has enabled them to take a far more comprehensive and judicial view of European architecture as a whole. The unity of spirit in buildings centuries apart in time, or separated by half a dozen political frontiers, must be far clearer to them than it can be to us, who are so intensely conscious of the local differences. It is, therefore, much easier for them to select impartially those features from the architecture of many periods and countries which are most appropriate to present-day needs. The fact that their own early colonial architecture—illustrated here by some fine examples—belongs to a time when domestic architecture was especially suitable to its purpose, and when larger buildings were simple and dignified, is a further help. Without the great romantic effects of medieval architecture the American buildings give a peculiar sense of fitness for their use and expressiveness of their function. The refinement and the great scholarship which Professor Reilly spoke of last week as especially distinguishing them must come, as he said, from the cumulative effort of many minds cooperating on the same problems and arriving at a perfect solution. It is interesting to see, in the work of one firm of architects, during thirty years, an increasing purity of style, as fineness of proportion rather than elaboration of detail becomes the ideal."

RELIGION-AND-SOCIAL-SERVICE

EPIDEMIC OF CHURCH BUILDING IN THE SOUTH

A PRACTICAL REPLY to religious pessimists is being given by the South, which is now consecrating more than \$25,000,000 in the building of new churches, and this is said to be only suggestive of still greater activities that will be seen in the near future. During the eight months preceding the first of June, as reported from week to week in the Construction Department of the *Manufacturers Record* (Baltimore), 360 church buildings were completed or started in the South, or more than one a day, each involving a cost of more than

started in the summer or fall of 1921 and which are not included in these figures. Many structures are so costly and of such an imposing architectural nature that they have been in course of construction for eighteen months or more. A great many of the churches now building are but a part of the ultimate unit, for some congregations are simply erecting the foundations for the main structure, or Sunday-school buildings which will be used until the main structure has been completed.

"Many of the buildings now under construction are of impressive and beautiful architectural effect, embodying all the newest ideas in church equipment and facilities. Several churches on which the preliminary work has begun, will cost \$500,000 or over. Some buildings recently erected or now going up are fireproof, steel frame, brick, stone, stucco, terracotta, or limestone finish, with slate, tile and copper roofs much in evidence, while the interior furnishings and decorations are in keeping with the main structure. Wooden buildings are not being erected for church purposes, except in country districts."

Courtesy of "The Manufacturers Record," Baltimore.

ONE OF 360 NEW CITADELS OF RELIGION IN THE SOUTH.

First Baptist Church of Shreveport, La., erected at a cost of \$500,000, and containing auditorium, gymnasium, Sunday-school rooms, broadcasting station, roof garden, banquet hall and nursery.

Even with all these operations now in full swing, the program for dotting the South with churches will not end with them, for we are told that there are still many more plans for new buildings in the hands of architects and contractors and that they are to be released in the near future for immediate construction.

A summary of church building in the South during the eight months preceding June, as compiled by the *Manufacturers Record*, for structures costing \$10,000 or more, is as follows:

\$10,000, with a total outlay of more than \$23,000,000. If to this were added the improvements costing less than \$10,000 to existing churches, and for building smaller churches, the aggregate, says the *Record*, would run to more than \$25,000,000. Even these figures, it is said, do not begin to tell the whole story, for there are many church buildings, large and small, for which a considerable proportion of the money for construction has been raised. Indeed, it is said that plans have been announced for scores of churches involving an aggregate expenditure of millions which will be under way in the near future, but whose cost is not included in the figures just given. During the seventeen weeks preceding the final week in May contracts were let in the South for churches at an aggregate cost of \$6,776,000, and as the final cost always largely exceeds the contract price, these figures, we are told, could easily be increased by 50 per cent. and still be conservative, for the estimates as to \$25,000,000 now going into church buildings, or the \$6,700,000 of contracts during the seventeen weeks, do not include the cost of equipment or furnishing or other expenses, but simply the contract price for the buildings themselves. Furthermore, and—

"in addition to the 360 church buildings reported as representing, with the small structures, a cost of \$25,000,000, there are scores of churches which have been completed, or which were

State	Number, of Church buildings	Estimated Cost or Contract Price
Alabama	14	\$698,375
Arkansas	19	983,000
District of Columbia	7	649,800
Florida	19	1,439,000
Georgia	15	722,000
Kentucky	9	442,000
Louisiana	12	1,282,520
Maryland	19	1,409,000
Mississippi	11	519,000
Missouri	35	2,015,500
North Carolina	43	2,934,000
Oklahoma	20	1,580,500
South Carolina	15	527,000
Tennessee	32	1,800,000
Texas	44	3,975,400
Virginia	29	1,458,500
West Virginia	18	1,177,000
	361	\$23,612,595

Some of the church buildings will run close to a million dollars in cost. The First Methodist Episcopal Church South, at Dallas, Texas, will have entailed an expenditure of \$850,000 when completed. Another imposing structure is that of the First Baptist Church, of Houston, Texas, ultimately to cost \$600,000. Some of the buildings already contain new departures in style and structure. For instance,

"The new \$500,000 building of the First Baptist Church of Shreveport, La., used for the first time April 9, contains features heretofore unknown in church architecture. A 10-story tower, together with connecting rooms in the annex, furnishes quarters for a Sunday-school of 3,000 and 12 young people's societies. One of the first radio broadcasting stations in the world owned and operated by a church is installed in the tower, and sermons, lectures, musical concerts, etc., will be broadcasted daily. The auditorium has a seating capacity of 3,000, and will be used as a civic and educational center, being fitted with costly organ, an echo organ and a chime connection. A roof garden with accommodations for 1,000 forms the fourth floor of the main building, and will be used during the summer for outdoor services, musical concerts and social gatherings. A banquet room will seat 500 at two tables. A gymnasium is located on one of the upper floors in the tower; a fully equipped nursery is in the basement, under the supervision of a nurse who will care for the children while their parents are at church or while shopping. A dining-room will serve lunch to several hundred working girls daily. A 13-bell chime occupies the ninth floor of the tower. The structure, uniting the main building of four stories and the tower contains 51,000 square feet of floor-space, and it is in use every hour of the week, ten workers being employed to supervise the various activities."

Among others mentioned are a \$400,000 Unitarian church in Washington, a \$600,000 Baptist church in Dallas, Tex., and a \$300,000 Christian church in Kansas City, Mo. A large number of Catholic churches are also being erected in the Southern States. The most imposing of these, says the *Record*, is probably the Church for Sisters of Divine Providence, at San Antonio, costing \$300,000. St. Joseph's Catholic Church, at Thibodaux, La., costing \$250,000, is building a new rectory to cost \$35,000; and the Church of the Holy Name, Miami, Fla., plans to expend about \$500,000 in a new building.

TRAINING "MISSIONARIES OF REVOLT"

PROLETARIAN SUNDAY-SCHOOLS IN ENGLAND are said to be growing dangerously in numbers and influence, and are creating much alarm among English churchmen because the schools have a definite policy of turning "children of tender years from the religion, morals, and hypocrisy of the master class," and sowing in their minds the seeds of "the revolutionary conception of life." These Sunday-schools, says *The Christian Century* (Undenominational), have sprung up within the last three years, and must not be confused with the Socialist Sunday-school movement started in 1896—tho the new movement is trying to inject the idea of red revolution into socialism. The songs taught in the proletarian Sunday-schools are said to be songs of revolt; "their spirit a spirit of intense, bitter, extreme class-hatred." In addition, we are told,

"They have a full-fledged set of catechisms in which England is denounced and Russia praised as 'the one bright spot on earth.' Religion is scorned, patriotism derided, and the national flag insulted, as a part of the ritual each Sunday morning. Everything is made attractive with games, acting, and stories of revolution and of revolutionary heroes. The children are taught to be missionaries of revolt at home, in school, and on the playground. These schools flourish chiefly in the Glasgow area and in South Wales, but they are beginning to appear in London. What strikes us is not only the ingenuity and efficiency of the propaganda, but the fact that the Sunday-school, too often neglected by the church itself, should be found to be the most effective instrument in the hands of the teachers of revolution. If it is the best weapon at hand for the service of class-hatred, surely it can be made more fruitful in behalf of the gospel of love with which alone these dangerous influences can be met."

ROME'S QUARREL WITH THE METHODISTS

BAD CATHOLICS, NOT GOOD METHODISTS, will result from the Methodist invasion of Rome, according to a Catholic view-point, and the challenge offered by the Methodist and other Protestant influences in the Eternal City is now definitely taken up by the entry of the Knights of Columbus into the field. The Methodists are unauthorized proselyters,

Photo by Central News Photo Service.

"IN NO WAY ENGAGED IN RELIGIOUS CONTROVERSY."

Edward L. Hearn, European Commissioner, says that the Knights of Columbus will devote much attention to teaching sports to Italian youth.

say the Catholics, and can succeed only in creating doubt where before were certainty and faith. The Methodists, on the other hand, maintain that they are in Rome, not to fight Roman Catholicism, but to combat the doubt and indifference already existing there, and that they have as much right in Italy as the Catholic Church has in America. The long-standing irritation between the two was greatly increased when the Methodists purchased in 1920 a site for a college on Monte Mario, a beautiful hill overlooking St. Peter's and the Vatican. Great outcry against the purchase was made at the time, and Cardinal O'Connell, Archbishop of Boston, is quoted as having said that the Methodists "come to Rome, the seat of the Roman Catholic faith, unauthorized, and fail to respect the faith existing there." The Y. M. C. A., which entered Italy during the war, also fell under the papal ban as tending to weaken the faith of Catholic children, and finally Pope Benedict XV summoned the Knights of Columbus to inaugurate their welfare work in Italy as an offset to those influences which it was feared might undermine Catholic faith in the Italian youth. The Knights of Columbus accepted the summons, and voted, through the Supreme Council, to spend \$1,000,000 in the project. Headquarters for the organization have been secured in Rome, Pope Pius XI has donated papal land to be used as an athletic field, and Edward L. Hearn, Knights of Columbus European Commissioner, announces that the work is definitely begun. In order to set forth its timeliness and the urgent need for the welfare work planned by the Knights for Italy, Cardinal Dougherty, Archbishop of Philadelphia, writes in a special letter to *Columbia*, organ of the Knights of Columbus:

"Italy has been almost crushed by the burden of the World War; and she will not be on her feet again for many years.

"Taking advantage of her poverty, various Protestant sects of the United States have founded on her soil institutions styled educational or charitable, whereas they are instruments for the perversion of Italians. These proselytizers have established themselves in Rome where they have opened settlement houses as a lure for Italians to barter their birthright of the Faith for temporal gain.

"They have gone so far as to plan the erection of a structure

overlooking the Cathedral of St. Peter, the Vatican, and the whole city of Rome. In their hatred of the Papacy, they have fraternized with the infamous Nathan, Masonic lodges, followers of the apostate monk, Giordano Bruno, and publishers of scurrilous literature against the Holy Father and the Catholic Church. These revilers of our holy religion, these seducers of her poor children, have been financed by American money. It is fitting that their propaganda be offset with funds contributed by American Catholics. By undertaking such a work, the Knights of Columbus will save many to our Holy Church, and will solace the heart of our Holy Father. They have aided other countries, especially Catholic France. Surely, when requested by the Vicar of Christ, they will not fail to extend a helping hand to the center of Christendom."

Pope Pius did not castigate foreign missionary intervention in Rome, says Commissioner Hearn in writing in the *New York Times* of his interview with the Pope. "He has his own opinion of it, as every cultured Italian has. The Pope makes enemies of no men. It is his concern to care for the faith of the people of Italy, and whatever obstacles are placed in his path he must meet with the means he desires to use. He has selected the Knights of Columbus to do a work for him that can not be accomplished by any Italian organization." Expressly declaring that the Knights are "in no way involved in religious controversy," Mr. Hearn writes that their work in Italy is being financed entirely by funds altogether distinct from their war funds and that much attention will be devoted to teaching sports to the Italian youth. The Pope is reported to have been much pleased with the results of the interview with Commissioner Hearn, and stated, as the latter quotes him:

"It is very fitting that you undertake this task, for it is no less important than any other kind of relief work. You will bring closer the relations between your country and Italy. I have a profound admiration for the idealism of America, which is none the less practical and can see the advantage to domestic morale of the extension to other countries of advantages which America enjoys. Italy is still struggling from the economic disadvantages entailed by the war; and in coming to us with your strength you are bestowing upon us an unqualified blessing."

The story that the Knights of Columbus were to be organized definitely to fight the Methodist Episcopal Church was not credited by it at first, says *The Central Christian Advocate* (Methodist), but it has since been "disillusioned" by the letter of Cardinal Dougherty to *Columbia* "aimed at the Methodist Episcopal Church." Yet is it not a basic principle of Americanism, asks the *Advocate*, "that any religion has a right to propagate itself by proper and honorable means?" Moreover,

"Is not the Church of Rome in the United States the beneficiary of that principle? If both of these questions must be affirmatively answered, stop, look at it a minute: Is it not somewhat of an un-American exhibition for an American organization to go to Rome with the avowed purpose, and under definite and distinct instructions, to make war on the Methodist Church which in Italy, with the full consent and welcome of the Italian Government—is doing in Rome precisely and only what the Church of Rome is doing in the United States?"

"Methodism create doubt!" exclaims the *Western Christian Advocate*, another organ of the Methodist Church, in repudiating the complaint made against the Methodists in Rome. Methodists, it declares, are in Italy "to find doubt and eliminate it." Instead of weakening faith,

"We are there to restore faith and certainty; to establish confidence and to lay the foundations of Christianity where they are now so much needed. We are not there to continue a Catholic-Methodist controversy, but if possible to join in cooperation against the common enemies of Christian civilization. We are there to help eliminate disease and death and ignorance and social apathy and irreligion and infidelity and atheism and to rebuild the altars of faith and good-will. Methodism has entered into Rome with a determination to succeed, not in the interests of a denomination, but in the name of Christ and humanity."

FIGHTING THE FUNDAMENTALISTS

HERESY HUNTERS "fairly burned the paper" in Columbus, O., recently when they published what they thought about the "Theological Seventeen," a body of liberal-minded ministers who believed the time had come to offer "a more rational, scientific and progressive presentation of the claims of the Christian faith." As a consequence, we are told, everybody in town began talking religion, and among those whose facility with the pen gave them entrance to the newspapers the controversy became so bitter that it would appear that if some folks had their way, "there certainly would be a literal and effective hell." The "Theological Seventeen," whose active membership just now is only fifteen, includes, writes Edwin A. Ralph in *The Congregationalist*, six Methodists, four Congregationalists, three Episcopalians, one Baptist and one Presbyterian, who meet once a month to discuss questions of theology, philosophy and sociology. They came to the conclusion, we are told, that they were under obligation to the community "to present their views as constructively as possible to the general public, for the twofold purpose of setting forth the constructive views held by leading men in our schools and churches, and also to answer the aggressive attempts of the Fundamentalists to carry things their way." A program was arranged under the general topic, "Christian Faith for Men of To-day," "the purpose being to give some estimate of lesser values, and to indicate the superior merit of those spiritual ideals that are large enough to command the devotion of the individual and the race." A week was devoted to discussion of the program, "without controversy on the one hand, or apology on the other," and the cooperation was asked of all who "aim to glorify Jesus Christ and to incarnate his ideals in terms of human living." No notice was taken of the Fundamentalists.

Two prominent effects are said to have resulted from the Institute. One was the winning of many men to a renewed interest in religious questions, while the other "was the stirring up of the most virulent opposition in the ranks of Fundamentalists and other conservatives," who countered with "typical Fundamentalist meetings, except, perhaps, that they were characterized by more spleen than is customary. No stone was left unturned that the 'Seventeen' and all their ilk might be properly punished and discomfited." In short, we are told,—

"The result of their activities has been to bring to the surface all in human life that is ugly, and to parade for the defense of the Gospel the unlovely traits that the Gospel is intended to overcome. It was a sorry spectacle. Sorrier still was the spectacle on the following Sunday, when the ministers of Christian churches, many of whom did not attend the Institute conducted by the 'Seventeen,' but depended on hearsay or newspaper reports, 'answered' the 'Seventeen,' lending themselves to language that was decidedly unworthy of men who claim to be ministers of Christ. So bitter and rough were letters sent to the newspapers, that one paper carried an editorial explaining that the editor would not allow them to be seen in his columns. Surely, if the Gospel must be thus defended, its way in the world must necessarily become very slow and uncertain! Nor is this all; efforts are being made to drive from their denominations some of the men who took part in the program of the 'Seventeen.'"

Unchecked, there is no telling, says the writer, to what extremes the protest against modern thinking will go, or to what serious controversies it will bring us. As he sees it:

"The time is now here when men of modern spirit must, in constructive, dignified fashion project the present-day convictions far and wide into the life of this country. The 'Seventeen' here in Columbus has come to no conclusion on which they are more united than this: We have started to do something that we thought ought to be done; we are now convinced that the times demand that what we have begun be pushed forward to its logical conclusion in repeated efforts to present the modern view and to educate the people to understand it and to gain the values that it presents."

AQUATINT FRAMED IN GOLD

By AMY LOWELL

WE are grateful to Miss Lowell for choosing a canvas that will enable us to reproduce her picture without cutting. Such a study as this from the *New York Nation* is one of the best justifications of *vers libre*:

Six flights up in an out-of-date apartment house
Where all the door-jambs and wainscots are of
black walnut

And the last tenant died at the ripe age of eighty.
Tick-tock, the grandfather's clock,
Crowded into a corner against the black walnut
wainscot.

Surrounded by the house-gods of her family for
three generations:

Teakwood cabinets, rice-paper picture-books, slim,
comfortless chairs of spotted bamboo.

Too many house-gods for the space allotted
them, exuding an old and corroding beauty, a
beauty faded and smelling of the past.

Tick-tock, the grandfather's clock,
Accurately telling the time, but forgetting
whether it is to-day or yesterday.

Sleeping every night in a walnut bedstead
With a headboard like the end of a family pew;
Waking every morning to the photographs of
dead relations,

Dead relations sifted all over the house,
Accumulated in drifts like dust or snow,
Tick-tock, the grandfather's clock,
Indifferently keeping up an old tradition
Unconcernedly registering the anniversaries of
illnesses and deaths,
But omitting the births, they were so long ago.

The lady is neither young nor old,
She walks like a waxwork among her crumbling
possessions.

She is automatic and ageless like the clock,
And she, too, is of a bygone pattern,
She sits at her frugal dinner,
Careful of its ancient etiquette,
Opposite the portrait of a great-aunt
Done by a forgotten painter.
The portrait lived once, it would seem,
To judge by the coquetry of its attire,
But the lady has always been a wax-work,
Of no age in particular,
But of an unquestioned ancestry.

Tick-tock, the grandfather's clock,
Ironically recording an hour of no importance.

Tho the *Double Dealer* (New Orleans)
is one of the young insurgents, yet it pre-
serves a grateful sanity, especially in its
verse which we pass on in these specimens
from the June issue:

SELENE

By JOSEPH CAMPBELL

I

"THE MOON ROSE UP"

The moon rose up in a dove-winged sky,
The wafer moon went drifting by.

The dove-wing deepened into blue,
The moon turned silver, the stars looked thro'.

Black tufted fir boughs, blown to flame
By the gusty wind that went and came.

Till the sea, unseen in the gathering night,
Strewed the distance with crests of white.

What tho' the like had fallen before,
I knelt to Beauty, and shut my door.

II

"INTO THE GATHERED CORNFIELDS"

Into the gathered cornfields the moon comes red
and round;
The night-bee passes with a low, humming sound.

On the silent shore the ebb-tide crowses;
Dusk like a dream lies over the farmhouses.

The wind barely stirs the dew-heavy fern;
The fox has stolen from the cairn.

Sleep claims the tillage, rock-land and the un-
known sky,
Where the gay Northern lights pale now and die—

Pale now and die, as the red moon pales,
Whitening, dwindling the higher it sails.

Just to bring back one of the lighter
moods of the war, we give this "Poem
from *Punch*" (Macmillan & Co.). It fits
in with the present or any vacation season:

BY THE CANAL IN FLANDERS

By NORMAN DAVEY

By the canal in Flanders I watched a barge's prow
Creep slowly past the poplar-trees; and there I
made a vow

That when these wars are over and I am home at
last,

However much I travel I shall not travel fast.

Horses and cars and yachts and planes: I've no
more use for such;

For in three years of war's alarms I've hurried far
too much;

And now I dream of something sure, silent and
slow and large;

So when the war is over—why, I mean to buy a
barge.

* * * * *

I'll moor my craft beside your lawn; So up and
make good cheer!

Pluck me your greenest salads! Draw me your
coolest beer!

For I intend to lunch with you and talk an hour
or more

Of how we used to hustle in the good old days of
war.

A FRIEND of ours once talked to an audi-
ence on fairy lore and was asked by an
auditor if she had ever seen a fairy. When
she said yes, he queried, "How do you know
it was a fairy?" "What else could it have
been?" was her counter, and the questioner
was silenced. *St. Nicholas* (June) shows
that the skeptic is still abroad:

WARNING TO ALL FAIRIES

(Sir Arthur Conan-Doyle reports that he has
photographs of fairies.—*News item*.)

By HAMILTON FISH ARMSTRONG

Puck, go hide in some harebell;
Mab, conceal your face,
Lest an evil camera-man
"Snap" your poise and grace.

Wary you have ever been
As the spotted fawn,
Sporting in the misty lights
On the edge of dawn.

Dangers new beset you now;
Men of science want
Pictures of your airy crew
In their forest haunt.

Leprechaun, beneath a leaf
Creep without delay;
Never let the camera-man
Catch you out by day.

Pixies and all Little Men,
Leave your tasks undone
If you run the slightest risk
Of going home by sun.

You who haunt the magic hills
Up by gray Glencoe,
Scan the patches in the gorse
Ere abroad you go.

They are armed with bulbs and plates,
Set by rule of thumb,
Waiting underneath the hedge
To catch you as you come.

Gather in the oaken groves
Beneath the mistletoe—
But, lest your faces get in print,
Go home by firefly glow!

Neriads and Orcads,
All you woody sprites,
Keep you to your wells and groves,
Save on inky nights.

Where the fairy rings arise
Through the summer grass,
There lie prying scientists,
Hoping you will pass.

We must be equipped with the psycho-
analytic method if we are to "get away"
with modern poetry. We may sympa-
thize with the London *Spectator's* baffle-
ment and be grateful that the poetry editor
took the step revealed in his note. "For
my own satisfaction I asked Mr. Armstrong
for the interpretation of his vision. The
pool is the mind, particularly the sub-
conscious mind; the young bathers who
trouble the water are the images and ideas
conveyed in poetry.—POETRY EDITOR."

POETRY AND THE SUBCONSCIOUS

By MARTIN ARMSTRONG

Dark is the mind's deep dwelling,
Roofed and walled and floored
With ancient rock. There water, slowly welling
Or slowly dripped, is stored
In a dim, deep, dreaming pool
Unvexed by rain or sunlight or the cool
Wings of the winds, untroubled by joy or grieving,
Or the bitterness or the ecstasy of living.
Till the white young bathers come, warily
treading,
Lovely, desired, with rosy flesh
Like the apple-bloom on the grey bough spreading
In April, and their feet refresh
Like April the grey desert place.

But when with a sudden freakish grace
They break the pool's long sleep in an airy flight
Of diving, the dim pool takes light,
Blooms to soft fire in a thousand curves unfurled
That shed a glimmering beauty on roof and walls,
And rouse in those stern halls
Laughing music of water, and the death
Of that dark underworld
Thrills harp-like with new ecstasy and the breath
Of a thousand buds uncurled.

PERSONAL • GLIMPSES

IN FAVOR OF THE YOUNG FOLKS

FIRE'S OUT, or at least under control. Loss fully covered by insurance. Not such a frightful loss, either. Conflagration really a blessing in disguise, as the new structure to be erected on the site will surpass in grandeur and practicality the one destroyed.

Figuratively—of course, figuratively—such is the conclusion reached by multitudes of observers regarding the wild doings of contemporary young folks. The preponderant testimony from college presidents, college deans, high-school principals, school superintendents, editors of religious newspapers, and editors of college weeklies and monthlies goes to show that the worst is past or even that what we have called the worst was instead a manifestation of tendencies actually beneficial. All in all, the opinions set forth by these optimistic on-lookers constitute a vigorous reply to the letters reviewed in last week's *Digest*, and it is significant that they come from the same classes of observers as the others and from the same localities—that is to say, from educational centers in virtually all districts of America.

For the sake of clearness, we print again the circular letter which *THE DIGEST* sent out and to which our correspondents reply. It was worded thus:

A year ago *THE DIGEST* gathered opinions from all over the country on dress, dancing, manners, and general moral standards, especially as these matters affected young people. The material was presented under the heading "Is the Younger Generation in Peril?" and aroused considerable comment from all quarters. There does not seem, at the present time, to be nearly so much discussion of this subject as there was a year ago, but of that little a large part is unfavorable.

Will you be kind enough to tell us whether, in your opinion, there has been a change, and, if so, in what the change consists? Are conditions worse or better? What are the causes? If remedies are in order, what remedies would you suggest? Your opinion, given to all America through our 1,500,000 copies, with millions of readers, may be of great value to parents, educators, young people, and others directly interested in the rising generation. Perhaps the crux of the question may be stated in this way:

Is society, especially the younger part of it, undergoing a revolution in morals, in manners, or in both?

In replying to this letter, several correspondents assert that much of the alarm over our young people's behavior was a result of sensational and wholly groundless reports in the newspapers. "It is a well-known fact that the metropolitan newspapers find no college news so tempting as the scandal news which comes from college and university communities," says Brewster P. Campbell, editor of the *Michigan Daily* (Ann Arbor). "Some universities, it will be noticed, receive much more such unfavorable publicity than do others. Investigation will usually prove that these institutions are located near, or in, large cities, where papers with a yellow tendency, are published. The university is a place where scandal can easily be started, and the papers play on this—manufacturing much news with but little basis."

"In many places we hear charges of indiscriminate and even organized immorality on the part of young people of high-school age," agrees President Futrall of the University of Arkansas. "If the persons making the charges are called on for evidence they are rarely able to produce any. There seems to be a type of mind which is always glad to believe that the world is going to the dogs with the young people leading the way."

Meanwhile, we are warned by numerous observers not to be too seriously distressed over developments whose reality no one questions. On the surface there are changes. How deep do they go? R. L. Nye, dean of the College of Agriculture at Syracuse University, replies in this optimistic way:

"The manner of dress on the part of girls, a general 'boldness' in their attitude toward the other sex, apparently less of the restraint of social convention, has led many of us older prudes to judge that there is a corresponding laxity of morals. I do not believe this to be the case."

"My conclusion," says H. Truman Bates, superintendent of schools at Somerset, Mass., "is that despite the fact that sex is unduly emphasized by fashions and the dance hall, we hear and know of no more immorality than at previous

periods in the history of society." A student editor, Andrew Hamilton, of the *Ellsworth Student* (Iowa Falls, Ia.), believes, similarly, that:

"The younger generation is perhaps quite as free from evil as were previous generations. The greatest trouble seems to be a desire to appear 'fast' because 'everybody else does it.' The sophisticated young man-of-the-world and his little 'flapper' are not devoid of goodness, as some righteous souls would have us believe; they do not themselves understand their actions; they are just 'jazzy' because it is the style in the city."

"The current idea that every girl having bobbed hair, a short skirt and silk hose is of the flapper type is erroneous. It is simply keeping up with the Joneses," thinks B. F. Weiss, principal of the Kent (O.) High School. President Atkinson of the Brooklyn Polytechnic Institute sends us a cutting in which the *Brooklyn Eagle* quotes him to this complimentary effect:

"On the whole, I approve of the modern style of dress and do not believe for a moment that it is as a general thing worn for any immodest motive. Generally speaking, I should say that it has not had a deleterious effect on the morals."

"The use of rouge, the lipstick and the eyebrow pencil is pretty general, I suspect. It is silly and objectionable, but not immoral. Whether cigaret-smoking is as general among young girls, I do not know. I hope not; but even this practise is not immoral. Calling it so will get us nowhere."

"I do not know whether men refuse to dance with girls who do not 'pet,' smoke and drink."

"Much of the criticism is due to the natural antagonism that has always existed and will always exist between the old and the young. As one of the 'old ones' I am quite ready to admit that the youth of to-day, while strangely different, is more moral than the youth of my day."

Equally complimentary to the young idea is C. R. Smith, editor of the *Kansas State Collegian*, who observes:

A FOREIGN REACTION AGAINST "IMMORALITY" TALK.

"The Mrs. Grundy Association," runs a translation of the caption that accompanies this drawing in *Nolen Kraker* (Amsterdam), "has at last found a model that will meet all the needs of modesty."

We solve your problem!

Combining thirty-two separate and distinct ingredients into one delicious soup is a problem you would find both irksome and expensive. Yet such a hearty, nourishing, full-flavored soup is just the kind you desire for many a meal. Almost without lifting a finger, you can enjoy it in

Campbell's Vegetable Soup

To rich meat broth, made from selected beef, are added choice baby lima beans, dainty peas, golden turnips, Chantenay carrots, diced white and sweet potatoes, chopped cabbage, luscious tomatoes, sugary corn, crisp celery, alphabet macaroni, barley, French leeks, okra, fresh parsley and other herbs and spices. Here is solid satisfaction for the hungriest!

21 kinds

12 cents a can

Campbell's SOUPS

LOOK FOR THE RED AND WHITE LABEL

"Young people to-day are just as home loving and just as moral as their parents were, but they object most strenuously to abiding by the superficial conventionalities under which their parents labored. If a girl does not like to be loved promiscuously she says so in the fewest and the plainest words possible and that settles the matter. The conversation of the average young couple to-day would be shocking perhaps to their grandparents, but if so it is because the grandparents of the present generation would have been much better off if they had been shocked a little more frequently. False modesty is passing. It is well."

Frank L. Freer, general secretary of the Ohio Christian Endeavor Union, believes that, "It is the unusual that attracts attention and we soon become accustomed to anything. This is especially true of young people and in no way can I bring myself to believe that the average young person has any moral disturbance because of current style." J. R. Kelton, principal of the Amsterdam (N. Y.) High School, expresses his agreement in the lively assurance that, "The powdered beak or the dimpled knee won't send any more to the bow-wows than did the styles when we saw less and thought more." And President Judson of the University of Chicago reaches the conclusion that there is not, at least, any "serious danger." He comments:

"There is always more or less discussion as to the younger generation. As far as my experience goes, and it covers now not a few years, the younger generation is always changing. It is changing now. Some of these changes I should rather not have. Others I am very glad to see. I do not believe, on the whole, that the conditions are materially worse than they have been for a long time. No doubt the war unsettled society at large. In this unsettlement perhaps our younger people share to some extent. But mind you, it is only a sharing of what goes with the entire community. In short, to answer your questions specifically, I do not believe that society, especially the younger part of it, is undergoing a radical revolution either in morals or manners. It is passing through a condition of change certainly in manners, perhaps to some extent in morals, but I do not believe that there is any serious danger. We need to do what we have always needed to do—to use the best efforts for wise direction and proper education. May I add that these efforts belong to the home and the church even more than to the schools?"

President Smith of Roanoke College (Salem, Va.) finds "young people to-day just as genuine and wholesome as they have ever been. They have more candor than formerly, more self-assertion, and greater intensity of life." Edith M. Tuttle, adviser to students in the Department of Education, at the Washington Irving High School (New York City), reports: "Our experience with our 5,600 girls in this school leads us to believe that there is at present as much idealism as ever among young people. Our girls show a willingness to learn and to practise the best in morals and in manners." "Fundamentally," agrees John C. Burtner, who edits the *Oregon Countryman* at the Oregon Agricultural College, "morals are no worse than before. They appear worse because the changing manners have allowed the worst elements to become conspicuous. Observation of a student body of 3,500 men and women emphasizes the absence of any major moral laxity in spite of the changing surface appearances." Edgar L. Killam, editor of the *Baptist*, looking backward, writes:

"My personal opinion, based upon a fairly wide observation, leads me to believe that a great deal of the talk about flappers, galoshes and wild oats which has had the public attention since

the war could, with a little change in terminology, be made equally applicable to the days when those of us who are so gravely concerned, were young. Our difficulty, it seems to me, is in no small part due to the facility with which we remember ourselves [as we were not. At heart I believe the youth of to-day is sound. Its overflowing life and spirits express themselves in a little different way, but it is the same kind of life, which is the possession of youth in all times. It is subject to excesses, but no more so than yesterday."

"Young people are doing openly to-day a great many things which they formerly did secretly," says W. F. O'Donnell, superintendent of the Carrollton (Ky.) public schools, "and this fact leads some to believe that there has been a lowering of moral standards." A similar differentiation between manners and morals is made by Dean Eldridge of the University of Idaho, who writes:

"Briefly, I believe there is a decided revolution in *manners* but I can not bring myself to believe that our young people are essentially different in *morals*. One hears now on the campus 'Hello!' even to the professors, in place of the 'How do you do?' of two years ago, but I see in this not a trace of disrespect, but rather a quite wholesome acceptance of the faculty as fellow humans!"

"Fundamentally, I believe, there has been no change. Only the appearances have changed, the real things will last," says F. King Turgeon, editor of the *Bowdoin Orient*. Charles F. Thwing, LL.D., president emeritus of Western Reserve University, sharpens his general approval with a bit of criticism. He writes:

"The morals of young people are not bad—in fact, they are becoming better. The year has brought improvement. The instincts of young, as of older, people continue to be sound. But the manners are cheap. Our manners lack dignity, poise, self-respect, a respect for life's sanctities. Irreverence characterizes both *manners* and *manner*."

"As far as I can see," remarks President Ray Lyman Wilbur of Stanford University, in a cheerful vein, "the young people are going downward at about the same rate that they were when I was in high school and in college some twenty-five or thirty years ago. The newspaper editorials and comments from the older generation that I heard then from above are very much like those that I hear all

around me at the present time. I find the young men and women with whom I come in contact fundamentally sound and wholesome." Ann Hastings, editor of the *Radcliffe News*, is equally optimistic. "I do not think," she writes, "the 'morals of the young' are inferior to those of previous generations. The 'young' always will shock the old, and the old always will talk about it." Nor are "the old," it appears, in a position to be censorious without incurring a degree of ridicule. Speaking for several fellow editors, Ward W. Adair, editor of *Railroad Men*, takes the elder generation to task in fashion:

"I am personally less concerned with the morals and manners of the rising generation than I am with those of people in middle life, particularly women. To see some of these old crows blowing smoke rings in a restaurant, or sitting around station waiting-rooms in knickerbockers, and with their feet higher than their heads, is what gives a man loathing and disgust. And these outrages are perpetrated more particularly by dames who have passed the half-century mark, and are trying to kid themselves that they are still on the map, than by any of the rising generation. Nothing is more tragic than to see one of these ancient

"SIMPLY FLAPPERISH."

Here is the real flapper, according to an artist who draws for *The Outlook* (New York), as opposed to the exaggerated conceptions of a number of authorities who believe that the young idea is not shooting as straight as formerly.

Youth is Flexible

*Action is Free and Joyous
when the feet are strong and supple!*

A swift, spontaneous move! That's the test of youthful ness—and of the soundness of your feet. For, if your feet are hampered by shoes that do not flex, how can you move freely and gracefully and as you should.

Women who wear Cantilevers feel like walking, dancing, swimming and playing golf. Theirs is the joy of spontaneous action. They stay young because they feel young.

The Cantilever Shoe induces the free and natural grace of carriage that diminishes fatigue and increases your youthful vigor. Ask your doctor or take the word of Frederic H. Robinson, editor Medical Review of Reviews, who says "A beautiful carriage is an enviable gift. No young or older woman can ever keep youth in her limbs if she artificially cramps their natural play."

You will like Cantilevers. The curved arch of Cantilevers is flexible like the arch of your foot. They have the smart medium heel and trim rounded toe of fashion. They are made for the woman who does not wish to sacrifice good looks for comfort.

All Cantilever Shoes are trade-marked for your protection. Prices are reasonable. Except in New York there is only one dealer in each town.

If no dealer in your town is listed at the left, write the manufacturers, Morse and Burt Co., 1 Carlton Ave., Brooklyn, N. Y., for the name of a nearby dealer.

Cantilever Shoe

Endorsed by Women's Colleges, Women's Clubs, Public Health Authorities, Physicians, Osteopaths, Directors of Physical Education, Editors, Stage Celebrities and prominent women everywhere.

birds trying to fool the disgusted spectators in regard to her age. She only succeeds in fooling herself."

"I have great faith in these future citizens of our great country, and should not be surprized any time to see a movement among them for the reform of the morals and manners of the middle-aged citizens of to-day," says Dean Hill of Georgetown College (Georgetown, Ky.).

The age of the critic has much to do with the flavor of the criticism, believes McLane Tilton, editor of the *University of Virginia Alumni News*. He observes:

"So far as mere diets go, all depends upon the age of the woman one happens to be talking with. Between twenty and thirty she defends the flapper; from thirty to forty, the honors are easy; from forty and upwards, the flapper has no friends among her sex. And that is that.

"Girls are no better or no worse than they ever were. There are just as many good girls, there are no more fast or bad girls, but all three of these types now mingle together in a way impossible thirty years ago. I well recall the horror created at that distant time when the chaperons of the

did. Unjust criticism by the mature is no less a fault than frivolity on the part of the young, and much of the recent criticism has been distinetly unjust." And when the older generation berates the younger for refusing to reverence tradition, there are those who would have us look back a little and see if the past had not its follies, equalling or outdoing in their absurdity (and sometimes depravity) the things so unsparingly denounced to-day. "On the whole," says Fitzgerald S. Parker, editor of the *Epworth Era*, "I think the morals of both youngmen and young women are better than they were a generation ago." "So far as I can see," agrees Dean Hurst of Syracuse University, "our young people are not undergoing any great changes for the worse. It is my honest belief that they are just as good and a little more capable." L. L. Gwaltney, editor of the *Alabama Baptist*, observes that "The good old days we hear about are not to be located in history." Mary L. Benton, Dean of Women at Carleton College, Northfield, Minn., defends modern dress, when not carried to extremes, and President W. H. P. Faunce of Brown University delivers the following encomium on the manners and morals of modernity as opposed to certain customs of "the good old days":

"The young people of to-day have not undergone any revolution in character, but have simply moved out into a new freedom of manners and garb. The same change is to be observed in literature, music and art. The new realism, or candor, or whatever one may call it, is appalling to many elderly people, who have forgotten the extravagances and excesses of their own childhood.

"No drinking customs of the present day can be as bad as those of a century ago, when every college or church furnished rum at the dedication of a new building or the ordination of a new minister. The sanctuary in which I worship each Sunday was built in part by the proceeds of a lottery. Have the 'praisers of the past' forgotten the immodesty of the hoop-skirt or the unhygienic and immoral kissing games which once were practised at every church 'social,' or the college drinking songs which now have everywhere been replaced by songs of athletic prowess?

"Good manners fifty years ago largely consisted in skilful concealments—of feelings, motives, and the entire self. The reaction from concealment to candor has its dangers, and must shock older minds; but minds that have never known the former inhibitions and repressions, find the new frankness naïve and straightforward."

Robert D. Byrnes, editor of the *Tripod* at Trinity College, tells us that "The undergraduate to-day plays bridge instead of poker and he drives a car instead of a fast horse, but he has the same spirit and the same ideals that the college man had a generation ago." President Blodgett of Adelphi College (Brooklyn) recalls the discussion provoked by the "banged" hair of thirty years ago, and the length of the skirts. "The conventions are less rigid than they were a generation ago," admits Dean Bouton of New York University, "but still far more

"NO SERIOUS DANGER."

President Judson of the University of Chicago reaches this conclusion in the course of a discussion of manners and morals, in which he asserts: "I do not believe, on the whole, that conditions are materially worse than they have been for a long time."

Monday German in a Virginia city saw a girl from another set on the floor, and when they became convinced a girl from their own set was using rouge. Both were promptly asked to leave, one permanently, the other to wash her face. This was business for the old folk, and they gave it strict attention. Most of the old folk to-day are themselves having too much fun to pass judgment in such cases."

Philip W. Porter, editor of the *Lantern*, a student publication at the University of Ohio, observes "the older generation can not take the slipper in hand until it cleans off the mud that is on it." Another defender of the youth of the nation goes further along the same line. The elder generation, she holds, is actually responsible for leading the youngsters into temptation. As this critic, Thyosa W. Amos, Dean of Women at the University of Pittsburgh, views the matter:

"At present, the social curriculum is being attacked because of social standards. The attack is unwarranted. The student does not set social standards. He inherits these just as he falls heir to the studies of the academic curriculum. No student invented jazz; no student wrote the sex play; no student wrote the present vulgar obscene songs; no student photographed the immoral film; and no student created coarse fashions in dress for men and women. All these are the gracious gifts of a commercialized society.

"If society in general had as high ideals as the average high school or college student, there would be a different world to-morrow. For the most part, his worst fault is that his taste is bad. Student government associations, fraternity and social groups are struggling to maintain high ideals of social life, but society at large makes their task doubly hard. In the past, youth has been trained to reverence and follow the judgments of maturity. To-day, when he follows the leadership of his elders, they condemn him."

President Kolbe of the Municipal University (Akron, O.) believes that our young people are "fairly capable of working out their own salvation as ably as their fathers and their mothers

FOR "THE NEW CANDOR."

President Faunce of Brown University believes in the "new freedom of manners and garb," which, in his view, accompanies a new regard for reality. Good manners fifty years ago, he says, "consisted largely in skilful concealments."

FROM CHORUS GIRL TO SPECIAL ENVOY OF THE UNITED STATES GOVERNMENT.

These photographs, from the "morgue" of the New York *Evening World*, show "the most famous woman in America" at periods in her career roughly coincident with her four marriages. The first photograph, that on the extreme left, was taken at about the time when she made her first stage hit, forty-three years ago. The last was taken in 1917.

LILLIAN RUSSELL'S PATH TO FAME

FORTY-THREE YEARS AGO, almost to a day, an eighteen-year-old girl from Iowa, named Nellie Leonard, appeared in the chorus of a Gilbert and Sullivan opera in Brooklyn. A few days later she broke her engagement with a wealthy young man-about-town to marry the musical director, Harry Braham. In the fall of that year Tony Pastor heard her sing, engaged her for his vaudeville show on Broadway, changed her name to Lillian Russell, and within a week New York was flocking to Pastor's to hear the beautiful girl with the golden voice and golden hair. That was the beginning of the career of Lillian Russell, who reigned for nearly two-score years as queen of the American musical comedy stage and died, early in June, wearing the title of "the best-known woman in America," conferred on her by numerous newspaper editors and dramatic critics. The President of the United States sent a telegram of regret, several cabinet members did likewise, and senators, governors, financiers, statesmen, editors and dramatic authors praised her in the newspapers as a woman of "wonderful personality," a "symbol of the imperishable in feminine charm," and a "truly good woman."

which included four marriages, began early, says a writer in the New York *Herald*:

A clear, fresh young voice and a vivacious personality gave early promise of a stage career, and her mother brought the girl East in the seventies to study music. Grand opera was her original goal, and she was progressing under Leopold Damrosch when Tony Pastor heard her sing and offered her \$50 a week to appear in his variety show. She accepted and Mr. Damrosch refused to speak to her or continue with her lessons when he learned she was singing at Pastor's.

But the youthful Nellie Leonard already knew enough of music to carry a lively music-hall tune, and besides she had certain physical attributes that Damrosch and all his fine technique could not improve upon. She looked so well that Tony Pastor had raised her salary to \$100 a week within a fortnight and to \$150 two or three months later.

The eighties saw Tony Pastor in his heyday as a producer of musical extravaganza, and the first-nighters of that day soon began to acclaim the sparkling genius of the blonde young woman whom the bills proclaimed as Lillian Russell. A glance at the list of productions she appeared in will give an idea of the range and character of her early successes:

She sang *Mabel* in the "Pirates of Penzance" burlesque, called "The

Pie Rats of Penn Yann," and *Phoebe* in "Billie Taylor"; subsequently at the Bijou she was *Djemina* in "The Great Mogul" and *Bathilda* in "Olivette." In 1882 she played *Patience* and *Aline* in "The Sorcerer."

Her London debut was made at the Gaiety in July, 1883, as *Virginia* in "Virginia and Paul," and at the Novelty Theater (now the Great Queen Street Theater) a year later she was *Polly Pluckrose* in "Polly," and toward the end of the same season

WHEN LILLIAN LOST HER DOG.

—from an original drawing in the possession of the Art Manager of THE DIGEST, made thirty years ago, by Baron C. de Grimm.

"Lillian Russell had a good time with life," says an editorial writer for the New York *World*. "This and her beauty are the facts that dominate the thought when one sits down to write of her in terms of farewell." It is equally true that she contributed in a generous measure to the happiness of others—and this applies not solely to the case of those who saw and heard her from the house side of the footlights. Her romantic story,

The most popular man in America

Suppose you were the most popular man in America. Suppose you were endlessly besieged with invitations to do this and do that. Suppose, when you made a public appearance, hundreds of people clamored to shake your hand, to attract your notice and your favor.

How many of the people that you met under these conditions would impress their personalities upon you? How many would say something you would remember? How many faces would you recognize if you saw them again?

You would remember the man who was in some way different from the run of men—perhaps through some attribute of appearance, perhaps some quality of thought or manner. But the great majority would be—just “people.” You might meet them repeatedly without knowing you had ever seen them before.

The consumer of merchandise is in the position of the most popular man in

America. Every time he opens the pages of his newspaper or magazine, scores of manufacturers and merchants step out to take him by the hand, to attract his notice and his favor. They talk to him about his needs; they invite him into their factories and stores; they urge him to compare their product with any other; they ask him to say this or that name when he is buying this or that article.

The successful advertiser is the one who does not forget that he is dealing with the most popular man in America. He does not forget that there are others in line who are trying as hard as he is to “get acquainted.” He realizes that to be commonplace is to be unnoticed—to be lost in the crowd. And so he goes for advertising counsel to an organization which has proved that it knows how to win the interest and the confidence of the most courted and the most sought after man in America.

The Human Terms of Tire Competition

MANY an American citizen has turned down a "job that looks like more money" in favor of a chance to do better work.

He gets called an idealist, perhaps. But when folks want to buy good merchandise and satisfactory service he's the kind of man they look for.

For practical example note the tire business.

* * *

Think back to the time when cord tires started to be talked about.

Cord construction had for its ideal a bigger service value for the car owner.

Whenever the cord principle was faithfully carried out it lived up to its original vision.

Now the makers of U. S. Royal Cords ask permission to put this on record:

Without high integrity of manufacture the cord tire might just as well not have been discovered at all.

Prices on United States Passenger Car Tires and Tubes, effective May 8th, are not subject to war-tax, the war-tax having been included.

United States Tires
are Good Tires

Copyright
1922
U. S. Tire Co.

Respect for the fine and rigid rules of cord tire building has made U. S. Royal Cords the measure of all other automobile tires.

A leadership obtained in less than seven years and in competition with hundreds of different cord tire brands.

How much could be saved for American car owners if all tire makers would compete day in and day out just on *quality alone?*

PERSONAL GLIMPSES

Continued

she impersonated *Pocahontas* in an extravaganza.

Rôle followed rôle in rapid succession. In 1900, she joined forces with Weber and Fields in their ambitious frolics, and in 1894 she sang "Lady Teazle" in an operatic version of "The School for Scandal." At this juncture, after a quarter of a century in musical pieces—

Miss Russell decided to attempt straight comedy. Under the management of Joseph Brooks she made her début as a comedienne at Powers's Theater, Grand Rapids, in "Barbara's Millions," September 13, 1906. The play reached Broadway October 8 at the Savoy Theater. It was a failure, closing in two weeks.

But Miss Russell and her associates were not downhearted. They quit Broadway, looked around for another vehicle, and tried it out in the "tall grass." The new play was a lively comedy, with a bit of melodrama, built in a racetrack atmosphere with a thrilling scene in the judge's stand during an exciting race as a climax. The name of it was "Wildfire."

"Wildfire" was a good name for it, too, for it went "big" in the tall grass regions. Twice during the first season Miss Russell had a chance to bring it to New York, but she turned both chances down. She wasn't quite sure of herself. Then at the beginning of the following season, one opening night at Asbury Park convinced Miss Russell that she was ready for Broadway again and this time she was right.

"Wildfire" came to the Liberty Theater, and stayed there for many weeks to the enthusiastic acclaim of the hardened old critics who had confidently expected to announce another flivver.

Miss Russell was married four times. Her first husband was Harry Braham, a musical director. They were married in 1880, while she was still in the chorus at Pastor's. It was not a successful union, and they did not live long together. In 1884 along came Edward Solomon, composer of "Billee Taylor" and other popular musical pieces, and Miss Russell eloped to London with him. She divorced Braham and later found that Solomon had a wife living in London, and he, too, was divorced. Subsequently she was married in 1894 to John Chatterton, who sang under the name of Signor Perugini. Chatterton was playing the male lead at the time in "The Princess Nicotine," and at each performance the two were united in stage wedlock.

It was said at the time that the romance—which culminated in a wedding in Hoboken—was fostered by astute press agents. At any rate, they lived together only a short time, after which Miss Russell permitted Perugini to sue for divorce on the ground of "permanent abandonment."

On June 12, 1912, Miss Russell was married in Pittsburgh to Alexander P. Moore, owner and publisher of the *Pittsburgh Leader*, after a romance of several years' duration. At that time she was on tour with Weber & Fields in a revival extravaganza, and when the tour reached its end a few weeks later the prima donna's long stage career, save for a few vaudeville engagements, was at an end.

But throughout the Progressive Party's campaign she was active on the stump for Theodore Roosevelt, and when the war

came she made many public appearances on behalf of recruiting and liberty loan campaigns.

Within the last few years Mrs. Moore had engaged in social welfare work among laborers' families in Pittsburgh, and her lively interest in the subject led President Harding to appoint her as a special investigator to study emigration conditions abroad. She sailed for Europe in January of this year, and toured Germany, France and Italy, returning in March after two months of research and study.

Her report to Secretary Davis suggested that American consuls abroad be given authority to conduct examinations and bar out all undesirable 'aliens, instead of permitting riff-raff of Europe to reach the shores of the United States. She also urged a five-year immigration holiday to permit the United States to recover its balance and thoroughly absorb the foreign element already within our gates.

Since returning from her trip, Mrs. Moore had made a number of addresses before Chambers of Commerce, Women's Clubs and various civic bodies on the subject of immigration.

The secret of Lillian Russell's perennial youth, in spite of her strenuous stage career, was a source of continual conjecture and speculation throughout the later years of her life. An old-time observer of Broadway life said recently:

"Lillian Russell took better care of herself than any stage star I ever knew. She was never seen in Rector's or Shanley's after the show. She never indulged in any midnight parties. Night life meant nothing to her. When her performance was over, she went straight home and to bed. Perhaps she would have a bite of supper and a glass of champagne with a few friends in her apartment, but that was the extent of her 'dissipation.'"

Miss Russell herself attributed her clear skin and her perpetual youth to regular hours, careful attention to her health, plenty of baths in tepid water, exercise (walking and tennis), and "lots of cold cream."

Arthur Brisbane, the Hearst editor, is among the many celebrities who bring wreaths to her funeral. He writes, in this characteristic vein, in his widely circulated daily column:

Lillian Russell is dead, and upon her tomb might be written: "Here lies one that made the world happier by her talent, beauty and kindness."

Stirpiculturists will be interested, with the rest of America, in Miss Russell's career.

When this writer, aged nineteen, reporter for Charles A. Dana's New York *Sun*, was sent to interview Lillian Russell at the Casino Theatre, Miss Russell sat in her dressing-room, nicely chaperoned by her mother, Mrs. Cynthia Leonard. Mrs. Leonard said, "Young man, let Lillian be a lesson to you, if you ever get married. Before she was born I determined that she should be very beautiful and have a fine voice and I kept my mind on that all the time until she was born. Now, look at her, and listen to her."

It was advice easy to take.

Mothers of little girls still to be born will be interested in the determination and success of Lillian Russell's mother. Lillian Russell is one of five distinctly American stage personalities of the past half-century—the other four being Mary Anderson, Minnie Maddern Fiske, Ada Rehan and Julia Marlowe.

DID MOTHER AND DAD
EVER APPEAR COSTUMED LIKE THIS?

Dayton Bicycles have been
leaders since your Dad was a boy.

The above illustration is reproduced from a Dayton Bicycle catalog of 26 years ago.

Styles of dress have changed from year to year but Dayton Bicycle quality has been the same for more than a quarter century.

Today the Dayton is supreme in all those qualities that mean speed, endurance, easy running—and dependability.

Our new booklet, "How to Choose a Bicycle," will be worth while getting. Send for yours now. It will help in arriving at a wise decision regarding the exact bicycle best suited to your needs.

No matter what bike you now own—or what kind you want—get a copy of "How to Choose a Bicycle" at once. With it we will send (also free and postage paid) a copy of our new art catalog. Use the coupon at once.

BOOTLEG WHISKY AS A POISONER

THERE may have been "a serpent in the cup," as we were often informed, in the "good old days" before Prohibition, but if there was, there are half a dozen serpents in every up-to-date glass of bootleg whisky—and each is more poisonous than the old-time variety ever thought of being. "When you drink bootleg the chances are better than nine out of ten that you are drinking rank poison." This is not a statement issued either by Prohibitionists to discourage drinking, or by Anti-Prohibitionists to show what Prohibition has brought us to. It is the conclusion of a large newspaper service, which had its men in various parts of the country buy the "ordinary mine-run of bootleg liquor," and then had the samples analyzed to get "an idea of what a man's chances are of getting poisonous booze." Dudley A. Siddall, of the NEA Service, with headquarters at Cleveland, Ohio, is authority for the statement that "insofar as possible we endeavor to duplicate, in buying, the exact conditions that would surround, say, a traveling man who might patronize bootleggers during a trip around the country." Thirty-eight samples of bootleg were bought in this way in fifteen cities scattered throughout the nation. As for the results, we read:

Only two of the 38 samples proved to be whisky of pre-prohibition quality. One of these was purchased in Boston; the other in Washington.

Two more were synthetic gin—held passable. One of these samples was from Cleveland, the other from Los Angeles.

But bootleg consumers in Boston, Washington, Cleveland and Los Angeles need not jump to the conclusion that because these samples were passable, all bootleg vended in these cities is safe. For other samples bought in these places proved dangerous.

Of the remaining 34 samples, 15 were doctored and diluted whiskies or whiskies produced from an alcohol base and artificially colored and flavored; 17 were raw moonshine of varying degrees of rankness; one was poor beer, containing wild yeasts; and one was a distilled wine, of poor quality.

Samples were collected from these widely scattered cities: Dallas, Tex.; Memphis, Tenn.; Denver, Col.; Norfolk, Va.; Oklahoma City, Okla.; Birmingham, Ala.; Cleveland; Chicago; Seattle, Wash.; San Francisco; Los Angeles; New York; Providence, R. I.; Boston and Washington.

They were bought from a wide range of bootleg channels and analyzed without selection. They came from drug stores, bell boys, bootblacks, barbers, porters, milkmen, near-beer saloons and similar channels of the trade, with a few seized in official raids.

The samples were assembled in Washington, and analyzed by Government chemists in Government laboratories.

The analyses showed that when you buy bootleg you get nearly always a dangerous concoction of colored and disguised alcohol, or a raw distillate full of aldehydes and volatile poisons that will leave you with an awful head the day after drinking, and a wrecked constitution after repeated doses.

The "aldehydes" found in the moonshines and doctored whiskies are elements

intermediate between alcohols and acids. They are derived from the higher alcohols by the oxidation and removal of a certain hydrogen content and the addition of a very small amount of oxygen converts them into active acids.

"The effect of these aldehydes," says William V. Linder, Government chemist "is to 'knock one out' much more quickly than would high-grade whisky.

"Their consumption over any considerable period undermines the general constitution to a point where it seems much more susceptible to many diseases.

"While not immediately poisonous, causing sudden blindness or death as does methyl or wood alcohol, their effect is definitely and cumulatively harmful."

The dangerous elements in moonshine and doctored whiskies, Linder explains, are due, for most part, to the unscientific distilling and blending. To quote:

"Moonshine," says Linder, "is produced for most part under the most unscientific and unsanitary conditions. The mash is fermented in barrels or tubs, usually in the open backwoods or in musty cellars. Under such conditions, the development of wild yeasts and unwholesome fermentations are common. Many moonshines show evidences of active putrefaction.

"In distilling, too, all the volatile elements come over. In commercial distilling, for the production of high-grade whiskies, it was the custom to discard what was known as the 'heads,' or first run, containing the high alcohols and the more volatile oils, and the 'tails' or the last run. Only the middle run was retained.

"The moonshiner, however, runs it all in—heads, tails and middles. The elements that the commercial distiller carefully eliminated, therefore, remain in moonshine.

"Moonshine, moreover, normally receives no aging. Hence it retains all the injurious qualities inhering to a raw distillate containing high alcohols, aldehydes and fusel oil, and also whatever additional poisons or injurious chemical elements may have accumulated through improper and unsanitary fermentation and unscientific distilling.

"All these elements, even including in one case signs of putrefaction, were present in the samples in this test."

Aldehydes, high alcohols and volatile oils in moonshine have a directly injurious effect on the circulatory, kidney and nervous systems, according to Reid Hunt, former chief of the Division of Pharmacology, Hygienic Laboratory, U. S. Public Health Service.

Also they result in "an increased liability to contract diseases or to contract them in especially severe form."

Among the ailments which these elements are generally recognized in the medical profession as aiding and abetting are:

Hardening of the arteries.

Cirrhosis of the liver.

A wide range of digestive disturbances.

The thirty-eight samples of bootleg collected and analyzed for the purposes of this test cost anywhere from seventy-five cents to \$6 a half-pint. Cleveland furnished the cheapest "poison," and Chicago, where the stuff averaged over \$20 a quart, set a record in expensive and dangerous drinking.

No highway engineer or road official should be without a copy of our latest manual, "Road Maintenance with Tarvia". Our nearest office will gladly send free copy on request.

The Future of a Community often lies in the Road Commissioner's hands—

Although the Road Commissioner never "heads the ticket" on Election Day, there are few public officials charged with duties more vital to the public welfare.

Good roads are indispensable to the progress and happiness of every community. With good roads, getting to town is made a matter of minutes—not miles; business flourishes, hauling costs decrease, property values rise, children enjoy the benefits of a central graded school, community and social life is broadened and made more enjoyable. The future holds forth great promise.

Throughout the country our engineers have demonstrated to thousands of public spirited road officials the great saving

resulting from a definite policy of Tarvia construction and maintenance.

This popular road material is unequalled for building new roads, for resurfacing wornout macadam, for repairing and maintaining improved roads of every type. Special grades are made for specific uses.

Tarvia roads are an indispensable part of every Good Roads Program. They are comparatively low in first cost, and are so much more economical over a term of years that the saving makes a more extensive road program possible.

If you want smooth, dustless, mudless roads in your community 365 days in the year, write to our nearest office for free copy of our illustrated "General Tarvia Catalog." You'll find it interesting.

Repair and Maintenance*

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department which keeps up to the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity, the matter will have the prompt attention of experienced engineers. This service is free for the asking. If you want *better roads and lower taxes*, this department can greatly assist you.

CONQUERING MOUNT EVEREST

THREE MEMBERS OF THE EVEREST EXPEDITION, Mallory, Summerville and Norton, on May 21st reached an altitude of 26,800 feet, the highest ever reached by man, and just 2,200 feet below the summit."

This message, which reached civilization in a roundabout way on June 8th, was followed by a Calcutta dispatch, dated June 12th, which announced that "two members are now attempting to reach the summit," so the final conquest of the world's highest mountain may be reported even before this page is published. The previous world's record mountain climb of 24,533 feet was made by the Duke of the Abruzzi, in this same Himalayan region in 1910. The recent dash of the three members of the British Expedition, which established the new record in mountain-climbing, covered only three days. The members left the camp at 25,000 feet on May 20th, climbed nearly 2,000 feet, and on the third day were back at what is known as Camp Three, at Changtse, 21,000 feet above sea level and three miles northward of the summit of the peak. Referring to this achievement, the *London Times* says:

In these tremendous altitudes, more especially as they did not use oxygen, this must be looked upon as pretty good going. If a further camp can be established at or about the extreme height already reached it seems well within the bounds of hope, given absence of violent winds and blizzards, that the final object will be reached. Judging by General Bruce's dispatches the whole organization appears to have worked perfectly.

The present record, which is not only a world record achievement in mountain-climbing but carries with it a suggestion of final success in conquering the mountain-top, is the result of much preliminary work. A "Reconnaissance Expedition," but one which ranks, nevertheless, with the major exploration expeditions of history, spent most of last summer endeavoring to locate a possible route to the summit. At a cost in toil, preparations and money suggesting comparison with most polar expeditions, a practicable route was discovered. At least, cable dispatches last September announced that a reconnaissance party of the expedition had penetrated the great mountain field on the northwestern side, and had found a slope which might be surmounted. This discovery was made after the mountain had been approached from almost every possible angle, always with the discovery that sheer cliffs, thousands of feet high, bombarded by avalanches, prevented any approach to the summit. On the northwest side, however, a long ridge stretched upward to the peak, still more than a mile higher than the highest point, some 23,000 feet above sea level, reached by the exploring party. It is along the precipitate sides of this ridge that the expedition will have to clamber on its final attempt to reach the summit. As against the optimistic pre-

dictions in last fall's cablegrams, however, the two members of the expedition who led the final reconnaissance have put forth a statement of their views which throws grave doubt on the conquest of the mountain this year, or any other. Their statement appears in a just-published account of the expedition, "Mount Everest—The Reconnaissance, 1921" (Longmans). After dealing

in detail with their discovery of the northwest ridge to the summit, the historian of this part of the expedition, George H. Leigh-Mallory, continues:

To determine whether it is humanly possible to climb to the summit of Mount Everest, or what may be the chances of success in such an undertaking, other factors besides the mere mountaineering difficulties have to be considered. It is at least probable that the obstacles presented by this mountain could be overcome by any competent party if they met them in the Alps. But it is a very different matter to be confronted with such obstacles at elevations between 23,000 and 29,000 feet. We do not know that it is physiologically possible at such high altitudes for the human body to make the efforts required to lift itself up even on the simplest ground. The condition of the party of 1921 in September during the days of the assault can not be taken as evidence that the feat is impossible. The long periods spent in high camps and the tax of many exhausting expeditions had undoubtedly reduced the physical efficiency of Sahibs and coolies alike. The party of 1922, on the other hand, will presumably choose for their attempt a time when the climbers are at the top of their form and their powers will depend on the extent of their adaptability to the condition of high altitude.

Nothing, perhaps, was so astonishing in the party of reconnaissance as the rapidity with which they became acclimated and capable of great exertions between 18,000 and 21,000 feet. Where is the limit of this process? Will the multiplication of red corpuscles continue so that men may become acclimated much higher? There is evidence enough to show that they may exist comfortably enough, eating and digesting hearty meals and retaining a feeling of vitality and energy up to 23,000 feet. It may be that after two or three days quietly spent at this height the body would sufficiently adjust itself to endure the still greater difference from normal atmospheric pressure 6,000 feet higher. At all events, a practical test can alone provide the proof in such a case. Experiments carried out in a laboratory by putting a man into a sealed chamber and reducing the pressure say to half an atmosphere, valuable as they may be when related to the experiences of airmen, can establish nothing for mountaineers; for they leave out of account the all-important physiological factor of acclimatization. But in any case it is to be expected that efforts above 23,000 feet will be more exhausting than those at lower elevations; and it may well be that the nature of the ground will turn the scale against the climber. For him it is all important that he should be able to breathe regularly, the demand upon his lungs along the final arete can not fail to be a terrible strain, and anything like a tussle up some steep obstacle which would interfere with the regularity of his breathing

THE SUMMIT OF THE WORLD'S HIGHEST MOUNTAIN.

This striking view of Mount Everest, taken with a telephoto lens, shows the roof-like ridge up which, it is hoped, a British exploring expedition may penetrate to "the top of the world." The photograph is reproduced by permission from "Mount Everest—The Reconnaissance, 1921," published by Longmans, Green & Co.

“Yes, Everything is Valsparred— Floor, Furniture, Walls and Floor-Covering”

VALSPAR, Valspar Enamels and Valspar Varnish-Stains are a real joy to the woman who takes pride in keeping her home spick and span. In your home you will find countless uses for them.

Valspar Varnish. This famous waterproof varnish gives a most beautiful and lasting finish. It is spot-proof and can be freely washed with soap and water.

Valspar Enamels. Made in twelve beautiful colors (also Black and White, Aluminum, Bronze and Gold). Since they are Valspar Varnish, combined with the highest grade pigments, they too can be washed freely and are unequalled in durability.

Valspar Varnish-Stains are Valspar Varnish in six transparent wood colors—Mahogany, Cherry, Light and Dark Oak, Walnut and Moss Green. You stain and Valspar with one sweep of the brush. These stains are absolutely waterproof—nothing will cause them to spot, fade or turn white.

All three are easy to use. They work freely under the brush, dry dust-free in two hours and hard in twenty-four. They may be rubbed down to a beautiful dull finish if desired. *All three stand the famous Valspar boiling water test.*

Description of Room

IN the beautiful room shown above the hard-surfaced rug and the furniture are finished with Valspar; the floor is finished with Valspar Varnish Stain (Mahogany) while the panelling is finished with White Valspar Enamel. The room can be freely washed with hot water and soap and kept perfectly bright, clean and sanitary.

This Coupon is worth 20 to 60 cents

The man who puts the bubbles in it

YOU have perhaps noticed the silvery bubbles in Clicquot Club Ginger Ale and that they stay in it a long time.

"Putting in the bubbles" is an important part of making Clicquot. The spring water, drawn from the bed-rock through aluminum pipes, is quite cold but not cold enough.

By refrigeration, the temperature of the water is forced down almost to freezing. Then the water is carbonated. That's what makes Clicquot so lively, so full of sparkle.

Warmer water would not take the carbonation so well, nor would it hold it so long after the bottle is opened. So the man who puts the bubbles in Clicquot watches the thermometers and keeps the temperature just right.

And every part of the making of Clicquot Club is just as carefully guarded. No ginger but real Jamaica ginger is used; only pure cane sugar sweetens it; and the happy blend of Clicquot is made with the addition of fruit juices. No wonder "they all like it."

Order Clicquot Club Ginger Ale by the case. Should you desire a change in flavors at times, you can get a mixed case with Ginger Ale, Sarsaparilla, Birch Beer and Root Beer.

might prove to be an ordeal beyond his strength.

As a way out of these difficulties of breathing, the use of oxygen has often been recommended, and experiments were made by Dr. Kellas, which will be continued in 1922.

Even so, there will remain the difficulty of establishing one or perhaps two camps above Chang La (23,000 feet). It is by no means certain that any place exists above this point on which tents could be pitched. Perhaps the party will manage without tents, but no great economy of weight will be effected that way; those who sleep out at an elevation of 25,000 or 26,000 feet will have to be bountifully provided with warm things. Probably about fifteen, or at least twelve loads will have to be carried up from Chang La. It is not expected that oxygen will be available for this purpose, and the task, whatever organization is provided, will be severe, possibly beyond the limits of human strength.

Further, another sort of difficulty will jeopardize the chances of success. It might be possible for two men to struggle somehow to the summit, disregarding every other consideration. It is a different matter to climb the mountain as mountaineers would have climbed it. Principles, time-honored in the Alpine Club, must of course be respected in the ascent of Mount Everest. The party must keep a margin of safety. It is not to be a mad enterprise rashly pushed on regardless of danger. The ill-considered acceptance of any and every risk has no part in the essence of persevering courage. A mountaineering enterprise may keep sanity and sound judgment and remain an adventure. And of all principles by which we hold, the first is that of mutual help. What is to be done for a man who is sick or abnormally exhausted at these high altitudes? His companions must see to it that he is taken down at the first opportunity and with an adequate escort; and the obligation is the same whether he be Sahib or coolie; if we ask a man to carry our loads up the mountain, we must care for his welfare at need. It may be taken for granted that such need will arise and will interfere very seriously with any organization however ingeniously and carefully it may be arranged.

In all it may be said that one factor beyond all others is required for success. Too many chances are against the climbers; too many contingencies may turn against them. Anything like a breakdown of the transport will be fatal; soft snow on the mountains will be an impregnable defense; a big wind will send back the strongest; even so small a matter as a boot fitting a shade too tight may endanger one man's foot and involve the whole party in retreat. The climbers must have above all things, if they are to win through, good fortune, and the greatest good fortune of all for mountaineers, some constant spirit of kindness in Mount Everest itself, the forgetfulness for long enough of its more cruel moods; for we must remember that the highest of mountains is capable of severity, a severity so awful and so fatal that the wiser sort of men do well to think and tremble even on the threshold of their high endeavor.

Mountain climbing authorities both in England and America have greeted with enthusiasm the recent record-breaking

accomplishment of the climbers. A special dispatch, copyrighted and supplied by the Mount Everest Committee, tells of the expedition's climb, by May 20th, to within a short distance of the camp at the 23,400-foot level. This year's expedition according to the same report, includes thirteen Britishers, more than sixty hillman, 320 animals, and a number of porters. An oxygen base, reports General C. B. Bruce, the leader, will be established, but it is noteworthy that the record height of 26,800 feet was established without oxygen. A special cable dispatch from London to the *Philadelphia Public Ledger*, dated June 9th, said:

The bulletin from Mount Everest arriving yesterday relieved the anxiety which was beginning to be felt for the Everest expedition and raised hopes of success among members of the Royal Geographical Society who have been doubtful whether human beings would be able to live at such an altitude as the summit of Everest.

They were astounded to learn from General Bruce's brief dispatch that three of the party had been able to climb within 2,200 feet of the summit of Everest and more than 3,000 feet higher than did any member of the previous expedition and without the aid of oxygen.

Other dispatches show General Bruce has been able to take the oxygen equipment to the bases which he has been establishing along the route of actual ascent, and that, coupled with the success of three of the party in outdistancing the other expedition, has changed the aspect of the second attempt entirely.

The *New York Times* comments on the expedition's recent success, and wishes it good luck for the future, in this editorial, headed "Near Everest's Top":

No one will be more surprised than Professor Dreyer of Oxford by the endurance of Mallory and his companions. Early in the year the professor conducted experiments with oxygen in a pressure chamber to determine how high climbers could safely go without a portable tank of oxygen. He concluded that it would be advisable to begin using the gas at about 23,000 feet. Yet General Bruce's mountaineers got up to 26,800 feet without it!

The question to be determined was whether the last 2,202 feet could be gained with or without oxygen. It was believed that at least one camp higher than 25,000 feet would have to be made. Could the coolies be depended on to carry up the camp supplies? At the greatest altitude, not far above 20,000 feet, which they strained up to with the reconnaissance party last summer, they were near the exhaustion point. The climbers would have to carry their own oxygen bottles, with mask and tube attachment, the weight of which is thirty-two pounds. The higher they worked their way up, the harder it would be to endure the extra load. An ingenious plan had been devised on paper to establish oxygen "dumps" by stages, so that one man at least, with four bottles on his back, could climb the last 1,000 or 500 feet and have enough of the gas left to get back to the last camp. It was feared, however, that at the highest altitudes no one would be able to support the oxygen pack. If Everest is finally conquered, it may turn out that oxygen played no part on the last "lap."

IN FAVOR OF THE YOUNG FOLKS

(Continued from page 38)

definite than they were in the Seventeenth Century at a time when Anglo-Saxon society had not yet been accused of degeneracy." Lillian Billings, dean of women at Bush Conservatory (Chicago), remarks, "Our present-day flapper wears knee dresses and roll-down hose, but is that so much more suggestive than the bustle or the sheath gown with the skirt slit to the knee?" And Jennie S. Ladd, dean of women at the University of Minnesota, asks, in agreement: "Would the loudest objectors care to have the tilters, the bustles, the huge sleeves, and the dragging

skirts return?" Ben-Fleming Sessel, editor of *Silver and Gold* at the University of Colorado, defends the modern dance in this paragraph:

"I see something in favor of the close dancing of the time which is condemned. It at least keeps young people dancing. Now we do not have to provide arbors at dances for those who find some other attraction than keeping step with the music. If it is sensually perverting, and I doubt it, it at least keeps our sensualities out in plain view. If jazz makes one riotous, then the old waltz makes one sentimental, and the last is as bad as the first."

President Swartz of the Woman's College of Alabama says that, "when he remembers some of the practises

"MANNERS ARE CHEAP."

At the same time, believes Charles F. Thwing, President Emeritus of Western Reserve University, the past year has brought an improvement in morals.

of the past, such as bundling, etc., he can not 'become alarmed or seriously imprest with the hue and cry which is raised against the young people of the present day.'" President Bell of St. Stephen's College (Annandale-on-Hudson), believes that, altho our young people have lost much of the old respect for conventionality, "they demand to know the reason for decency and insist that the reason must go deeper than conformity with the conventional notions of those at present controlling society." "The simple fact is," declares Henry F. Cope, general secretary of the Religious Education Association, "that young people to-day are really a good deal more moral than their grandmothers were; the difference lies in the fact that youth to-day act with intelligent choice as to their conduct while the past generations usually acted under control, by authority, or according to some fixt tradition." D. W. Worthing, dean of the College of Architecture at the University of Arizona, advises that we "Let the young things take their risks, just as we had to take ours. Perhaps at our age they will be as safe and harmless as we are." "In our opinion," says A. B. Clarke, editor of *The Messenger* (University of Richmond), "there has been no revolution in morals except in the sense of a change toward greater frankness and open-mindedness. On the other hand, manners have undergone a tremendous revolution. Give the younger generation time. It has defied the conventions of its elders and has undertaken to work out its own ideals." In these scientific days we believe in experiment, asserts Harold P. Knauss, editor of the *Muhlenberg Weekly* (Muhlenberg College, Allentown, Pa.). "Perhaps," he concludes, "the present generation is making some experiments; here's hoping that we interpret the results rightly."

"The whole movement," agrees William S. Ament, alumni secretary at Oberlin, "is characterized by a shift from dogma to experimentation, deductive reasoning to inductive, authority to experience." Arguing along similar lines, Virginia H. Corbett, dean of women at the Colorado Agricultural College, writes:

"I notice two characteristics that arouse alarm on the part of some of their conservative elders. The first is a frank questioning of standards and conventions which must give reasons for their old-time power or be placed in the discard. If this attitude was noble in Martin Luther and the great leaders in scientific inquiry, it is not entirely ignoble on the part of our youngsters of to-day, tho it may be surprising. They are already finding that the genuine has been tested by time and will remain. The second is the craving for amusement and entertainment, which is a normal result of the age in which they live. The age which has provided the movie and the automobile must expect that they will be used. But these amusements have helped to teach many things that have been undreamed of by the young of other times. They face the problems of their age with better understanding of its dangers and possibilities. They will be able to meet its requirements."

That all this "experimenting," to accept a liberal view, is fraught with more or less danger, a majority of our correspondents seem to recog-

nize, and it appears that in various localities the young people themselves do. While there is little acceptance of convention as such, we hear that experimentation grows more cautious, with promise of a return to beaten paths. "The reaction has already begun," according to President Smith of Washington and Lee University. "The 'jazz' period is receding, and when a saner equilibrium has been attained, we will find that the average woman, while no longer a clinging vine, helplessly adhering to some manly oak, will have gained in breadth, strength, and poise, more than she has lost in gentleness and docility." "We believe that this year we can distinctly say that the peak of this has been passed and that now there is a slow but gradual and distinct reaction against the excesses of recent years," declares C. F. Ross, dean of men at Allegheny College. "An illustration of this may be seen by the fact that in the first half year the number of dancing parties decreased approximately 14 per cent. over the preceding year, and also by the fact that there have been fewer matters which might be termed disciplinary, than in many years past." J. D. Moore, editor of the *Baptist and Reflector*, gives it as his opinion "that there has been a decided improvement within the past year in the moral ideals of the young people. "Organizations have arisen among them," he observes, "which are intended so combat many evil tendencies." Touching especially on alcoholic tendencies, Arthur E. Wilson, of the *Maine-Spring* (University of Maine), tells us that "Maine has shared the average college reputation for drinking in the past, but it has been noticeable that there is great improvement this year. This can not be entirely credited to Prohibition, as our geographical situation

"SOUND AND WHOLESOME."

The young people of this generation, in the opinion of President Wilbur of Leland Stanford University, are "fundamentally" as right as they ever were.

By degrees comes light; and man's control over the conditions of his life grows greater and greater.

Out of Ages of Experiment

MYSTERY, darkness and helplessness held man through dreary ages. Then it dawned on a human mind that experiment was the key to human betterment. With the vision of a prophet Roger Bacon declared that experiment would lead to powerful machines that would traverse oceans, earth and even the air.

For this unholy idea Bacon was imprisoned through long years. In his cell he experimented with glass and discovered a basic principle of eyeglasses. That was 650 years ago.

Three hundred years later a group of open-minded men in London formed the first society to encourage experiments. To the Royal Society of London we owe the multitude of scientists whose great genius has helped us to gain "complete power over the conditions of our lives." One group includes those who have devoted themselves to releasing man from the many defects of his eyes.

The improvement of your vision, as Roger Bacon first discovered, is produced principally by the surfaces of lenses—their curvatures—not by any magic in the glass alone.

When your eyes call for help your Optical Specialist works with all the means of precision he possesses. But up to the present time he has been unable to tell accurately if the curves on many kinds of lenses have been ground as prescribed for you.

Now, out of years of experimenting, comes the invention which meets this great need—The Wellsworth Lensometer. It measures these precious curvatures with the utmost precision.

This remarkable instrument is a product of long scientific experiment. It again verifies the wisdom of George W. Wells when he established laboratories at his great optical works at Southbridge, Mass., and brought scientists there to study. During his last years he charged his sons and fellow workers to spare no effort—to leave no experiment untried—to make Wellsworth Laboratories the center of optical research for the betterment of human vision.

Through the services of Optical Specialists you can make sure that the most precious of your senses is profiting by the best knowledge of today.

How can your home be HEALTHFUL without Running Water?

Install This Private Pumping Station In Your Home

Carrying heavy pails of water day after day is as injurious to a woman's health as breathing impure air or eating bad food. Doing things every day the hard, inconvenient way has taken the joy from thousands of lives.

Health in the home demands sanitary conditions and modern comforts. And one important feature is *running water, under pressure*. When you have running water you have a modern sink. Water, hot or cold, or hard or soft, is always available.

No More Pumping

You simply turn the faucet. You have a modern bathroom in the house. You have running water in the basement, in the garage or barn. You have water *under pressure* for sprinkling lawn, flowers, garden truck, and for fire protection. These things are *necessary* to healthful and happy surroundings.

Whether your house is a summer place on the lake, a suburban home or on a farm, you can have these health promoting conveniences by installing this home pumping station on your premises.

It's Automatic FAIRBANKS-MORSE HOME WATER PLANT

Operates from any electric light socket or home lighting plant circuit. Pumps water from cistern, shallow well, spring or lake, *under pressure*. Noiseless and *automatic*. No switch to turn. No adjustments to make. Has galvanized steel tank. This is the only water plant with the famous Fairbanks-Morse Pump.

Capacity 200 Gallons per Hour

Now selling at a low price. Costs only a few cents a week to operate. Don't accept a substitute. If you do not know our local dealer write us for complete information and literature.

makes the 'stuff' obtainable." W. S. Gober, principal of the Elgin (Ill.) High School, reports "less dancing, less jazz music and heedless running about now than a year or two ago." We are told by Principal C. P. Quimby that the girls at the Cony High School in Augusta, Maine, voluntarily adopted a number of resolutions making for more modesty in dress.

Then, too, a great many observers assure us that out of the general upheaval there is emerging a really splendid type of young manhood and young womanhood—a finer type, indeed, than any we have evolved hitherto. That is the opinion advanced by President Murlin of Boston University, who says that "Students were never so responsive to ideals, were never so ready to follow the right sort of leadership, were never more earnest in devotion to vital instruction, were never more responsive to all the higher and finer ideals for which the college stands." Similarly, Oliver Reiff Hartzell, superintendent of the San Rafael (Cal.) schools, observes that "On the basis of conventional standards, our young people are sliding down hill, but in their observance of their principles of right and wrong as it affects actual fundamentals, they are stronger than the generation which preceded them." Ross N. Young, principal of the Stillwater (Minn.) High School, adds the prediction that "the youngsters of this generation are going to be much better and much wiser parents than those of to-day." And Frank Wilson Blackmar, dean of the Graduate School of the University of Kansas, argues to this effect:

"The changing customs of dress, dancing, cigaret-smoking, furnish great opportunities for the sensationalist, but these changes do not represent progress or deterioration, for the lines of progress are more sternly drawn and are not thrown aside by temporary adjustments. It is not possible to defend the actions of many young people in respect to these customs, but why single out 10 per cent. of the young and charge their indiscretions to the whole number? Ninety per cent. of the young people of my acquaintance are sane, wholesome, and sensible, with intellectual and moral integrity not inferior to but probably in advance of those of the past generation."

A. M. Kerr, editor of the *Herald of Gospel Liberty*, finds that youth is to-day as clean and fine as ever—"and more of it generously disposed to a life of unselfish service than in any previous generation." President Penrose of Whitman College (Walla Walla, Wash.) would rather have young folks loyal to self-chosen ideals than to have them "conventionally correct in slavish obedience to the voice of authority." "After this wave of extremes in dress, dancing, jazz music and so forth has passed," says President Roessler of Valparaiso University, "I believe the

young people generally will emerge morally stronger and better than before." Dean Heckel of Lafayette College finds his students "manlier, more reasonable, more self-controlled, more serious-minded, more purposeful." They display "a sturdier type of character," agrees Dean Vickert of the theological seminary at Colgate University. President Macmillan of Wells College is, in his own words, "strongly inclined to side with those who frown on the present-day tendency to advertise and criticize any little change in the dress or demeanor of our educated young women. The mingling of the sexes in society on the basis of equality, it should be remembered, is only a few centuries old and confined to a small portion of the civilized world. Every forward step has been criticized, but the criticisms have not been justified by the event." "The younger generation shocks my conservative soul like an eruption of Vesuvius," confesses Dean Page of the School of Medicine at the University of Cincinnati, "but I have moments of calm during which I can see that while the dangers of youth's lofty flight are greater, it also runs a better chance than ever before of reaching the stars." Quite as optimistic is H. G. Russell, superintendent of the Beardstown (Ill.) schools, who writes:

"Tho the pessimist rant and the critic croak to their heart's content, the present youth of the land are growing into the wisest, most virile, most versatile, most capable and most useful generation since history started."

"Young people are safer together now than ever before," believes S. A. Covington, principal of the Franklinton (La.) High School, "because a good part of the false modesty has been eliminated, and they understand themselves and each other better than ever before." "What change is there?" asks Georgia Meckling, librarian of the Seniors High School at Butler, Pa. "The child of to-day may lack the courtesy, even respect for his elders, which belonged to the child of yesterday; but the offspring of to-day has a self-reliance, an insatiable curiosity which will send the next generation ahead of the civilization of the last. Yesterday said, 'Dig! Dig! Dig!' 'Pep! more Pep!' is the language of to-day. The excitable rush of the younger generation carries us on, not to revolution, but to a bright, alluring future." Selden Peabody Delany, editor of the *American Church Monthly*, takes the same general attitude, and Bishop Thomas F. Gailor, head of the Protestant Episcopal Church in America, sums up a mass of popular opinion in a recent statement, running:

"The young girl of to-day is as good as she was thirty years ago. There is no reason to believe that we are in a period of immorality because youth is full of pep and life and jazz. I am not going into hysterics because of this skipping about of young women."

A Tough Battery for Rough Trips

Just one rough, hard trip to the fishing grounds—if your battery isn't in the best of health—may put it out of commission. Or a long, hot tour may do it. Or a few weeks' neglect. Or an unusual amount of stopping and starting.

Mighty few people realize the cruel punishment a battery has to stand even in ordinary, everyday service. *It has to be tough!* Indeed, the only safe kind of a battery to have is the *toughest*, most *powerful* and *durable* battery you can find.

Many hundreds of thousands of owners have found this to be the Willard Threaded Rubber Battery. They choose it not only because of its insulation but also because the name Willard assures honest quality and conscientious service.

195 car and truck manufacturers pay an additional price for Willard Batteries with tough Threaded Rubber Insulation between tough Willard plates.

20 Things that Try the Toughness of a Battery

1. Hard, fast driving
2. Rough roads
3. Mud and dust
4. Infrequent testing
5. Lack of water
6. Long tours
7. Much stopping and starting
8. Cold weather
9. Hot weather
10. Poor carburetion
11. Stiff oil
12. Tight motor bearings
13. Short circuits
14. Loose connections
15. Generator out of adjustment
16. Generator worn or dirty
17. Distributor worn or dirty
18. Excessive use of lights
19. Loose hold-downs
20. Electrical devices added beyond capacity of battery

BIRDS - BEASTS - AND - TREES

ANIMAL FREAKS IN NATURE'S SIDE-SHOW

"LADIES AND GENTLEMEN! Step right up this way and get your tickets for the greatest side-show on earth! Don't miss the stupendous spectacle of the only authentic and genuine freaks of nature, produced and supplied by nature herself especially for this exhibition! Here you see the two-headed lizard, which runs either backward or forward; the brainless sloth who lives upside down; that Woolworth Tower

his finger also, shows great affection for a gentleman who visits him every Tuesday and scratches his back. Perhaps the most extraordinary of the freaks is the giraffe, the tallest creature in the world. There are two of these at the Zoo, Jack and Jennie by name. The writer says:

At the age of two years, Jack was eleven feet seven inches tall. He has been growing a foot a year ever since and now he is a fourteen-footer, and still going strong in his apparent ambition to rub noses with the stars. He may reach the height of eighteen or even twenty feet before he gives it up and stops. As for Jennie, it is true that she isn't quite so towering, but certainly no one ever will insult Jennie by calling her dumpy.

From their aerial height these two look down on you when you visit them, in a startled, amazed way, as if, in their opinion, you, not they, are the queer spectacle. Perhaps that is exactly what they do think—if they think at all. It is doubtful if they do. For altho they live in an exalted atmosphere, there is no evidence that they think lofty or complicated thoughts. Even their keepers are not impressed by their show of brains—rather the contrary.

But if they do not think deep thoughts, they have strong preferences. Part of their time is spent in a large stall, twenty feet high, part in a corral on the outside. According to changes in the weather they are turned out or stopt up. For they are delicate and apt to contract sore throats and pneumonia.

Now when the time comes to go indoors, Jennie always goes freely, of her own will. On the other hand, Jack has to be driven inside. At times the keepers have to put a halter round his neck and some of them pull while others lambaste him from behind.

With Jennie it is just the reverse. She prefers an indoor life. When the weather turns warm and bright, and Jack is all eagerness to get out, the keepers have sometimes to pull and lambaste Jennie. In other words, their tastes are different. They are fond of each other; they never quarrel. But Jack likes country life, an *al fresco* existence. Jennie prefers indoor life.

In the wild state, giraffes live in herds and eat the tender shoots of certain trees that grow high from the ground. Constant reaching up after this delicacy has,

through the centuries, lengthened their legs, shoulder-blades and necks, until now the giraffe is his own stepladder.

If you look at him, you think his front legs are longer than his back ones. But that is an illusion. The legs are the same length. It is the elongation of the shoulder-blades that give the tilted-up appearance. The giraffe rarely feeds on the ground. If he has to drink water, or to pick up any object, he must straddle his front legs out in a painful and awkward manner.

The giraffe is an impractical, visionary-looking animal, whose thoughts, you would say, are up in the clouds. But in his wild state he can take care of himself pretty well. A kick from his front leg has been known to lay a lion out; and the hind leg can swing not only backward but sideways.

He is not swift of flight, for when he tries to put on speed, his legs get tangled up. But he is not only his own stepladder but his own observation tower as well. He can see an enemy a long way off. In captivity he is a simple, harmless fellow, always perfectly groomed, and with the gentle, melting eye of the gazelle. His horns are little make-believe protuberances, more of an ornament than a weapon. He doesn't know he's a freak—but he is, all the same, one of the queerest in nature's side-show. He

Photographs by Edwin R. Sanborn. Courtesy New York Zoological Society.

"THERE AIN'T NO SUCH ANIMILE."

Jennie and Jack can hold up their heads with the best, for giraffes are the tallest animals on earth. Jack is fourteen feet tall, and still going at the rate of a foot a year. Their favorite sports are "eating off the top shelf of a tree, rubber-necking, and having six feet of sore throat."

among animals, the giddy giraffe that eats off the top shelf of trees; the tortoise that weighs three hundred pounds and is three hundred years old—a pound for every year!——"

And so the barker at the circus of nature might go on, with but this difference from the regular side-show announcer, that what he says is true. And just as the tallest man and the fattest lady have personalities and whims and eccentricities of their own, so the characters in this circus have their amusing or amazing quirks and wiles. They like some people, and they don't like others. They are fond of one kind of candy, and turn up their noses, if they have them, at other kinds. Of the three kinkajous in the New York Zoological Park, two will bite and scratch, and the other will curl up lovingly on your shoulder, says Samuel A. Derieux in the *American Magazine* (New York), and Rudolph, the honey badger—called the pigmy giant because he is so strong and scrappy—who grabbed Mr. Derieux's cane and came near chewing it up and who would gladly have chewed

Another Seiberling Promise is Fulfilled

In the very first advertisement of the Seiberling Rubber Company, in January, 1922, appeared the following statement by Mr. F. A. Seiberling:

"There is room for great new achievements in increasing the durability of tires and *reducing the cost* for the benefit of the travelling public."

The promise of increased durability was immediately made good by notable structural improvements—such as extending the tread all around the tire from bead to bead to prevent tread separation—and these were embodied in every tire made by Seiberling, without exception.

The promise of reduced cost as well was first fulfilled in the Seiberling 30 x 3½ Clincher Cord at \$12.50 which set a new standard of cord tire value for owners of small cars.

Now the better manufacturing processes responsible for that notable achievement have been perfected and extended to include all straight-side Seiberling Cords as well as the Seiberling-built Portage Cords and Fabrics.

Therefore a price reduction of approximately 12½% on all Seiberling Straight Side Cords and all Portage Tires was made effective June 1, 1922.

Whatever the car you drive, you can today buy a Seiberling-built tire embodying, in Mr. Seiberling's own words: "highest quality and low cost to a degree which has not been equalled in my 23 years of rubber manufacturing."

If you do not find a Seiberling dealer in your community, write us for nearest address at which you can procure Seiberling Cords and Tubes.

The Old Way.

File Your Cards in Sight

Kardexed Records Save Money

130,000 records Kardexed—any one instantly-in-sight—5,000 to 10,000 transactions a day! All handled by a few clerks. This means a great saving in time and money over the old "cards-in-a-box" method. You can use your present card records or ledger sheets in Kardex. Kardex equipment saves its entire cost every year in clerks' wages alone—this entirely aside from its remarkable speed of reference and the constant control of all vital business facts that it gives executives.

Ask for booklet about how Kardex exclusive features can conserve your time and increase your employees' speed and accuracy. Write 275 Kardex Bldg., Tonawanda, N. Y.

BIRDS, BEASTS AND TREES

Continued

is the tall man—the tallest, by far, in the world.

A lively and gifted freak is the kangaroo. In 1770 some sailors from the ship of Captain Cook, the great explorer, which had touched on the wild Australian coast, came running back to the vessel with the report that they had seen an outlandish creature, as tall as a man, who stood up on his tail. It was an "Old Man Kangaroo." One of these creatures, named Pop, together with lesser lights of the same family,

POP, THE KANGAROO.

This is Pop's best boxing attitude. Having stood up on his tail thus, he strikes with one of his hind feet.

makes his residence at the Zoo, and Mr. Derieux tells us:

When he first came, Pop was a bad fellow, likely to swat his keeper any time. His dangerous blow he does not strike with his front feet, but with his hind ones, which are armed with a vicious claw. In order to deliver a knockout, he throws himself back on his tail, stands upright, and kicks with a vicious force that may kill. "He lets me alone now," says Riley, his keeper. "I can outbox him, and he knows it."

For our benefit Riley gave him a tap on the jaw. In his anger, Pop looked ridiculously like an old man who had been insulted. His head quivered as if from a slight palsy, such as you see now and then in old men, and he kept on nodding, then shaking it, as if to say, "You'd better not do that again!" Finally, he reared back on his tail, which is equivalent, so far as the kangaroo is concerned, to rearing back on his dignity.

Of course Riley did not push the matter any further. "Old Pop's a good scout," declared he, "and we ought not to bother him."

As for Mom, the mother kangaroo, she

Top View

has a little one, which she carries around in a sack. It is now half-grown, and sometimes comes out of the sack and hops around. But at sight of people, it jumps back in and is hidden from prying eyes. The sack will be at Kiddy Kangaroo's disposal until he is nearly grown. Then, some day, Mom will dump him out and tell him to shift for himself.

Most animals make a noise when angry, or frightened, or just feeling good. The kangaroo is practically dumb, tho sometimes you can hear an indistinct chattering or smacking noise of the lips. There is one animal which never makes a sound, not even when caught and killed—that animal is the friend we have just left, the giraffe.

What is the ugliest animal in the world? You may differ about which is the most beautiful, but Mr. Derieux insists that there is no ground for difference of opinion as to the ugliest. The wart hog wins on every count. We read:

He hasn't a single redeeming trait, physically speaking—not one. His eyes are set at the top of his long flat head; below the eyes are unsightly warts; his tusks grow all sorts of ways; his hair is thin and scraggly; his tail looks like a frayed twine string. He is moth-eaten, unkempt, thoroughly disreputable. But he certainly can plow up the ground!

In looking at his corral I couldn't help thinking that he would make a valuable animal to dig up streets where you want to put down asphalt or paving; even old asphalt streets, he could loosen up for us. All that Clarence—for that is his name—needs, to become useful to man, is a course of training. Clarence, also, says Riley, is a good scout, and far from a fool. He knows his keeper; he knows his name, and he will come running at call. When he eats, he gets down on his knees as if saying prayers over his food. The reverential attitude, combined with the grotesque and disreputable ugliness of the suppliant, is a sight to remember.

If Clarence does have a rival in ugliness, that rival is the giant tortoise Buster, in Mr. Derieux's opinion. Buster, according to computation, was born about the year that the Pilgrims landed at Plymouth, three centuries ago, when Elizabeth sat on the throne of England, and America was a howling wilderness. At present writing—

Having reached the ripe age of three hundred years and assumed the mature proportions of three hundred pounds, Buster is living a life of ease and contentment. Next to him resides a young sprig of a tortoise—a mere infant of only ninety years and weighing only a hundred pounds! Both are the degenerate descendants of a huge race of reptiles which roamed the globe long before man put in his appearance.

Buster shows his years; he looks very old and very wise. His wedge-shaped face is wrinkled into a comical grimace, as if he might be laughing at us newcomers on this terrestrial globe. He bears us no grudge, tho. He is a friendly old boy. If you call him, he will come to the fence slowly and with dignity, and will eat a sandwich or a banana (banana preferred) out of your hand. As a matter of warning, perhaps it ought to be stated that he will eat your hand also, so that it is advisable, when the end of the banana is reached to turn loose quickly. Not that he is vicious—he just

THE SHEPARD ELECTRIC LIFTABOUT

THE Willow Brook Dairy, Mt. Vernon, N. Y., sought ease, speed, and a true saving in handling hay. They found the answer in the *LiftAbout*. Unloading, storing, distributing—this new and smaller electric hoist does all, with less labor, and reduces a job of hours to minutes.

LiftAbouts have displaced many old fashioned and expensive ways of moving and lifting loads. They have solved the long standing question of the best way to re-handle at the lowest cost. Power lifting economies are now enjoyed by thousands, many of whom thought they couldn't use electric hoists. The *LiftAbout* may be your hoist.

Low cost

Due to standardized manufacture and quantity production the *LiftAbout* is surprisingly low priced. Its maintenance negligible. Its installation easy and economical.

Performance-proven design

Incorporated in the *LiftAbout* are the exclusive features which have made "Shepards" the best known and most widely used electric hoists. Fool-proof, damp-proof, dust-proof, fume-proof throughout.

Drop a line

A request from you sends a *LiftAbout* bulletin, or, if you desire, a representative who can tell of cases parallel to yours where loads are moved fast, safely, and at greatly reduced cost.

Shepard also builds Electric Cranes and Hoists in capacities to 30 tons.

BIRDS, BEASTS AND TREES

Continued

doesn't know that you object to having your hand eaten.

Yet he is not a fool, all things considered. With the coming of night and chill, he makes his slow and ponderous way to the door of his house, where he waits for it to be opened, as a dog might wait. That, you may say, shows no remarkable intelligence.

A HARD-SHELLED ANCIENT.

Buster has hung around for three centuries. He was born about the time the Pilgrims were setting out for America. He will eat out of your hand, or eat your hand—it's all the same to him, he's that kind-hearted. Perhaps one grows indifferent after three hundred years.

Perhaps not, but it is unusual in a reptile; because reptiles, as a rule, don't know enough to get in out of the cold. Likewise, Buster recognizes a uniform at sight, tho he doesn't distinguish between people. He shows as much repress excitement at the spectacle of a motorman as he does at that of a park-keeper.

Of Rudolph, the honey badger, who bit a hole in Mr. Derieux's walking stick, he relates:

Rudolph is set low to the ground, and has a white streak running down his back. My acquaintance with him began when I poked my cane through the bars to start a ball rolling, in the hope that he would play with it. He paid no attention to the ball. Instead, he grabbed the stick with teeth and claws.

I never imagined there could be such power in a small animal. For a while I thought I would have to surrender my cane. Finally I wrenched it loose; but it will always carry the marks of Rudolph's teeth and claws.

I hunted up the keeper, Landsburg, and showed him the depredation.

"This is Tuesday," said Landsburg. "Every Tuesday a gentleman comes to see him. Yonder he sits now on that bench. See if he won't introduce you to Rudolph. He can do more with him than I can."

The gentleman came at my request. At the sound of his voice Rudolph ran excitedly to the front of his cage, and his friend rubbed his back and talked to him. Whenever he stopt Rudolph stuck his paw through the cage begging for more attention.

"Feel the power of that arm," said the man.

I, too, caught Rudolph's claws and got a tug from the little giant that showed strength out of all proportion to his size.

And now I was aware of the fact that there was unusual excitement among all the little freaks in the small mammal house. Not only Rudolph, but the other animals also, were running to the front to see their friend.

There was present a whole collection of coati-mundis, small animals with long

snouts, like that of the ant-eater. One of these, the white-nosed coati-mundi, set up a long, eager cry. According to the keepers, whenever the benevolent gentleman appears, even before he enters the house, and before any one else knows he is present on the grounds, the white-nosed mundi cries out in excitement and joy.

I would not have believed it if I had not seen it. At every cage now little beady eyes were staring with eagerness and glistening with excitement. Their friend went the rounds, scratching their backs, calling them by name, rubbing their heads, sticking his finger in their mouths.

Finally, in an unostentatious way, he moved his hand toward his inside coat pocket. At this movement, the excitement doubled and trebled. Every keen eye was fastened on him. He was going to give them candy!

Now, above the cages of the coati-mundis are red stripes which mean that these animals are exclusively meat-eaters. According to the gentleman they will eat only one kind of candy—a kind with almonds in it. And now out of his pocket he took a number of these bits of candy and handed one to each of his friends.

From the house, he and I then went out of doors to the yards on which the cages open. "Rudy," called the man, "come, baby." At the sound of his name, Rudolph came running excitedly, like a dog to his master.

"Animals have always come to me," said the man. "I visit these every Tuesday. They know when you sympathize with them. They are lonely."

It is just a matter of recreation to him, he declares, to visit them. I could not help

UPTON SINCLAIR'S SENSATIONAL NOVEL They Call Me Carpenter!

WHAT would Christ do if he should return to earth today? This is the question men and women—sincere or sneering—have been asking each other for two thousand years. Reverently, yet fearlessly, Upton Sinclair sets out to answer that question. No novel of our time has caused a greater sensation than Upton Sinclair's "The Jungle"—novel of the Chicago stockyards. But that will pale into insignificance compared with the story of "Mr. Carpenter" and His adventures in our world of Jazz, Flappers, French Fashions and High Finance. It all begins with the miraculous stained glass window of St. Bartholomew's Church—in Hearst's International for July.

"I lifted my eyes and there in the aisle of St. Bartholomew, standing with his hand on my head, was the figure out of the stained-glass window. Where the figure had been was a great hole with the sun shining through."

NORMAN HAPGOOD'S 2d ARTICLE On Henry Ford and the Jews

DID you read "The Inside Story of Henry Ford's Jew Mania" in the June number? Now comes the second installment—even more startling. Read about the wild jumble of Tsarists, Ford Jew-investigators, Roman Catholics, Masons, Pogroms, Protocols, Sinn Fein, Ku Klux Klan—and see if YOU can guess which documents are forgeries—and see if YOU can tell where the Truth begins or ends.

Hearst's International

thinking that it went a little deeper than that. I know this, for I saw it demonstrated. His voice and his face, no less than his candy, are very welcome to the little freaks.

A BREWERY THAT BECAME A MUSHROOM RANCH

WHEN, like Othello's, the brewery's occupation disappeared, what was to be done with the brewery? All over the country there are extensive and expensive establishments that threaten to become just so much uselessness. However, in one case, an answer has been found. The accepted peace-time industry of beating swords into plowshares, says a writer in the *New York Evening Post*, is outdone in novelty by the post-prohibition industry of converting a brewery into a mushroom bed, but the mushrooms have won out and displaced vats and brewing in the establishment of a New York brewer. The experimental stage of the new mushroom ranch has long since passed, says the writer, who goes on to describe the present state of that particular brewery, the property of A. G. Hupfel, Jr.:

Out in the paved courtyard there are still evidences of scrapped vats and dismantled brewery paraphernalia. Inside—after one of the heavy doors of the great rock caverns has been opened carefully and closed just as carefully and even more quickly on account of the temperature—there is a remarkable glimpse of row after row of even, semi-circular mounds of dampish earth, pearled here and there with tiny mushrooms, or mottled with strangely fantastic patterns of whitish mould.

When Mr. Hupfel decided to turn his brewery into a mushroom plantation, he summoned to his aid a Frenchman of many years' experience in this industry. The French method of growing them in cellars and caves in narrow, rounded beds was closely followed and proved successful. But the loss of space with this manner of culture was very great, and some plan of utilizing the cubic space of these lofty caverns was studied. Trays were experimented with and proved practicable, so that in many rooms steel racks have been built from ceiling to floor and filled with flat beds of mushrooms on trays.

Not content with inducing the mushroom to give up his time-honored habit of growing in mounds, Mr. Hupfel next tried the experiment of growing them outside the cellar and up-stairs on any and every floor of his vast plant. Again Mr. Hupfel won out, and the visitor may have the remarkable experience of climbing flights of stairs one after the other to find mushrooms growing in rows or on trays as persistently as under the old conditions of cellar culture. All the mushrooms need, in Mr. Hupfel's opinion, is to have the conditions right.

"And we make the conditions to fit their needs," he said calmly, as he switched on a light for the visitor's benefit. "There is the apparatus we manufacture the atmosphere with as they need it." He pointed to a mysterious looking bit of construction

Pleasing to
the fingers

HERE is a pencil so well balanced and so pleasing to the fingers that you can say farewell right now to such old-time enemies as "three o'clock fatigue" and "writer's cramp."

That rounded-hexagon shape is the answer. It has as much to do with ease and speed in writing as the lead itself. The name is

at the side. "In this room they are being given a fog."

And they were, a *bona fide* fog, rolling down so densely that the low mounds were not visible a few feet away. When the atmosphere is changed and cooled later, precipitation will take place, and the dew of heaven descend quite realistically on the plants. Mushrooms seem, in fact, to be rather more temperamental in their demands than one would suppose who has only an acquaintance with them at restaurants, for the excitement of a thunderstorm seems to stimulate them to an access of interest in growing.

So Mr. Hupfel treats his plantation to a miniature thunder-storm by means of a large static machine, and the mushrooms thrive under this artificial electrical disturbance which creates some subtle change in the atmosphere to which they respond both in speed and size of growth.

With heating and refrigerating plants throughout the great establishment, artificial showers or clear, dry weather may be produced to meet the mushroom's most capricious demands, and the result may be seen in the most toothsome varieties of both dark and light mushrooms, in moist delicacy of perfected growth. As the mushroom deteriorates rapidly, the obvious advantage of being able to purchase them within a few hours of the time of their picking is no small feature in the question of growing mushrooms in the city itself.

"CHARMING" THE WARY ANGLEWORM

"THERE are some fellows," speculates the *Bulletin of the American Game Protective Association*, "who do not know all the tricks of the trade." The writer had been using fishworms for bait ever since he was big enough to dig them—and he usually had to dig them, altho always willing to try anybody's advice on methods to make them come out of the ground and crawl into a can without any physical effort on his part. He says:

We have laid wet burlap sacks on the ground, we have beat on the ground with boards, and probably have done everything that anybody ever told us to, but usually when we wanted worms to fish with we dug them, and often we had to dig far and deep.

Several years ago upon coming east to live we were told that the only way to secure fishworms was to take a flashlight and go out at night and pick them off the lawn. Very craftily and wisely we looked at this method as another form of snipe-hunting and made vows that no wise birds would take us out and leave us holding the sack.

The thing happened. We saw a fellow on his hands and knees with a flashlight, picking up big, fat fishworms. Practically every angler we have met in the East has known about this method of getting bait, which was handed down to him by his great-grandfather. We are still of the opinion, however, that many anglers in the West do not know that this is possible and we are publishing this note with the idea of saving many blistered hands and sore backs.

Apparently only the grandfather and grandmother worms come out at night, as you never get any small ones. Where the lawn grass has been cut closely and well watered it is an easy matter to pick up half a canful of good big worms in an hour. Do not laugh when the statement is made

No More Saturday Rest Ups!

You want to shave *every* day with Williams'

Many men have the sort of skin that must be humored a bit, that every now and then, Saturdays, most likely, says, "Oh, let me alone!"

But the face that gets a daily lathering with Williams' never says this.

For the Williams' lather is lather for the *skin* as well as for the beard. It is lather that meets and overcomes that difficult and all too frequent combination of a tough beard and a super-sensitive cuticle.

And afterward a face that is glove-smooth and blooming.

Williams' Holder Top Stick is one form of Williams' Shaving Soaps that furnishes this perfect lather. The *original* Holder Top—the stick in "the holder that holds."

The metal collar that holds each stick, both the original and the Re-Load stick, does several things:

It prevents loosening or wobbling.

It makes it easy to remove the stub—a firm stub that you can use the last wafer of.

It makes it easy and quick work to insert a Re-Load Stick.

Re-Loads save you money. Get one and keep the original box.

A clean, fresh white towel every time

FREE—"Thirsty Fibre—His Biography"—an interesting and instructive booklet. Send for it.

Every ScotTissue Towel contains millions of soft Thirsty Fibres, which absorb four times their weight in water. They make ScotTissue the quickest-drying, most satisfactory towels made.

Just think how delightful it is to get an individual, never-before-used towel for every wash-up and *know* that your hands are the very first to touch it.

That's what you get in every ScotTissue Towel—every time. A towel that is soft, absorbent, soothing—without taint or suspicion—never laundered—never used before—never damp or half-clean when you need it.

They cost only 50 cents for a carton of 150 towels (except in foreign countries). That's three towels for a cent (and even less by the case). Your stationer, druggist or department store can supply you.

Don't confuse ScotTissue Towels with harsh, non-absorbent paper towels

that it takes skill to catch them. You can not pick them up as you do when you turn over a shovelful of earth. Each worm has a good grip on the hole he just crawled out of, and when he sees you coming for him he can snap back in with about the alacrity of a fully stretched rubber-band. Get your flashlight and go out and try it.

NATURE'S TREE-FREAKS

THAT old dame, Nature, does not wholly deserve her reputation of working in a very orderly manner. The truth is that "she is forever doing stunts which would seem to indicate a very freakish disposition," says the *Boston Transcript* solemnly. Men who roam the woods know this, for they are continually running across trees and shrubs which are as far different from the type as tho a deliberate experiment was being made in the evolution of strange forms. From among these, nurserymen obtain the odd trees with which landscape gardeners like to decorate the lawns of their clients. Says the writer:

The weeping trees are merely freaks, and most of them have been discovered growing wild or else have come up unexpectedly in a nursery row. It is the same with the pyramidal trees, which are narrow in girth but shoot straight into the air like huge needles. Even the Lombardy poplar is an abnormal form of the common black poplar of Europe. Prof. C. S. Sargent, director of the Arnold Arboretum, has been getting together in that institution probably the largest representation of abnormal forms of the world's different trees to be found anywhere in this country.

Professor Sargent says that the Lombardy poplar probably first appeared in northern Italy early in the eighteenth century, and that very likely all the trees now scattered throughout the world are descended from a single individual which happened to grow in this peculiar shape. Moreover, all the trees, wherever found, are males. According to Professor Sargent, the Lombardy poplar has been much in favor with landscape architects because of its adaptability and its rapid growth. It is perfectly at home in all parts of America, but probably the finest specimens to be seen anywhere are growing in the central valley of Chile.

There are other trees in the Arboretum collection which have taken on this same upright habit. One of them, and one which attracts much attention because of its peculiar appearance, is a sugar maple. A very perfect specimen stands by itself near the maple group just beyond the shrub garden. This maple is one of the narrowest and most remarkable of all trees having fastigate form, which is of special interest because the parent tree is a native of Massachusetts, having been found in 1885 in a Newton cemetery.

For some reason the maples seem to have been singled out by nature as special subjects for her freakish experiments. Not satisfied with producing a maple which grows straight into the air she has evolved another kind which has the opposite tendency. It is a Norway maple, which makes a great round ball, being as different in

habit from maples of the ordinary sort as one can well imagine. The specimen in the Arboretum, altho it has been growing for fifteen or sixteen years, has never added more than a foot for each year of its growth, and is as broad as it is tall.

There are many other maples which are unusual in one way or another, but one of special interest has been named the Eagle's Claw maple, owing to the peculiar development of its foliage. The leaves of this odd tree are toothed and notched in the most remarkable way. They curl up, too, even when in their natural state, the pointed ends assuming very much the appearance of real claws. There is little about this tree which could be called beautiful, but it has the merit of being out of the ordinary.

There is something about the so-called weeping trees which makes them much in favor for planting on private grounds. For years weeping trees of various kinds have been industriously hunted for and largely propagated by nurserymen. In Europe they are even more popular than they are here, and many of the kinds which are used there are to be found in the Arboretum.

These trees are grown mostly from cuttings. Sometimes a weeping branch is grafted on a stem of a normal tree of the same or a related species. Of course, weeping willows are the best known trees in this class. Apparently they have wept down through many ages, for the Chinese weeping willow has been a favorite for centuries. It is a familiar object in many Chinese pictures, and has long been represented on Chinese porcelains and wood carvings. When it first reached Europe it was supposed to be a native of the valley of the Euphrates, and so was misnamed *Salix babylonica*. More than half a century ago great numbers of these trees were planted in Massachusetts, but they suffer from the cold here, and are constantly growing less.

Freak trees are not necessarily freakish. One of the handsomest of the trees in Europe is a form of the beech. Unfortunately it grows very slowly, and while it has been planted here, there are no specimens in this country to compare with those across the water, where the great tent-like trees prove a constant surprise to American visitors.

Everybody knows the weeping birch, and its beautiful cut-leaf form. Freak as it is, it has delighted multitudes of garden-makers. All must regret that this tree, which has been planted in immense numbers all over the northern States, is fast disappearing, owing to the havoc caused by insects which work under the bark of the trunk.

While some of the most conspicuous among nature's stunts have been done with deciduous trees, the evergreens have not been overlooked. In the Arnold Arboretum there are two remarkable dwarf gardens made up of little evergreen trees, many of which naturally grow to large size. In some instances specimens of these baby trees, no higher than a man's waist, are growing in close proximity to huge specimens of the same species which tower far above them.

There is a spruce in the Arboretum which much resembles a camel. It is a comical looking object and probably another freak like it will never be grown, for no one will care to make grafts of it, unless, indeed, to place in some museum of strange and curious trees. It is thus that nature operates, producing her abnormalities in forms which are both inviting and repellant. It remains for men to say which shall be selected and given to the people. And yet, it may quite likely be that dozens of the abnormal trees are growing in the depths of the forest which are quite as handsome as any we know but which have never yet been seen by the eye of man.

Lyonized means to have clean teeth and to have them admired.

PUSHING PROSPERITY TOO HARD

TIMES are better, but any effort to create a boom psychology will do more harm than good, say certain thoughtful observers of business conditions. "There are unmistakable symptoms that the return of prosperity is being pushed too hard," remarks the *New York Journal of Commerce* in a detailed review of recent tendencies. "The best business and banking opinion is not looking for anything partaking of the character of a boom," declares Benjamin M. Anderson, Jr., economist of the Chase National Bank of New York, "and would be very apprehensive if any boom phenomena should manifest themselves." Dr. Anderson insists "that efforts to whip up intense business activity by propaganda should be deprecated, and that any violent spurt which such methods might lead to would be unsoundly based and would lead to sharp reaction." "The rank and file of business men, and especially the rank and file of speculators," it is suggested, "are probably somewhat more optimistic than the analysis of underlying factors can justify." Dr. Anderson points out that "when business is really active bank loans to commercial customers do not go down week by week, as they are still doing, on the whole, in the United States; and (2) when business is really active, business men generally do not look with patience and complacency upon a protracted coal strike." The conclusion is that business is still subnormal "and is to be improved, not by over-exertion of a convalescent patient, but rather by gradual building-up." Turning from the general to the particular, Dr. Anderson remarks pointedly that "the man who raises prices with the first real impulse of reviving demand is likely to experience a set-back."

That business is a convalescent patient who shouldn't be overworked is also the opinion of *The Journal of Commerce*. It sees several signs that the return of prosperity has been pushed too hard of late; that inflationary tactics are being resorted to in connection with financing, and also with trade. For one thing, there would seem to be a return of the stock-watering evil. For instance, it has been reported that a large block of stock was to be supplied to the promoters of one of the recent steel mergers at a nominal price. There has been indication of a disposition to issue watered stock on the part of a number of concerns, "not only those which have failed to make stock distributions representing their war profits," but also "some which are now apparently inclined to capitalize the future possibilities of earnings that may be made during the period of prosperity that is believed to be opening." As a result, we read:

There has undoubtedly been a revival of disposition on the part of Congress and of various administrative bodies to pry into financial and industrial conditions with a view to exposing conditions of this sort. The recent call of the Senate for an inquiry of somewhat similar type into the state of things in the oil industry is reminiscent of the various trust investigations which were common after about 1905, and which at that time caused so much embarrassment—often of a well-merited kind. This is undoubtedly a danger which the stock market must confront during the next year or so.

The Journal of Commerce also calls attention to the plan of issuing stock without par value which has recently become so popular, especially among concerns which hold valuable franchises or whose business contains a large element of good-will. These issues are, of course, based on the theory that current income has no very necessary relationship to the physical value of the plant, and there are other advantages in this method of financing. But it seems to the *New York paper* that "there is an undoubtedly greater tendency to the watering of stock and the general 'boosting' of prices for commodities and services in the case of those enterprises which are not definitely capitalized than there is in the case of those which have placed a fixt value on their securities."

There is said to be some inflation on the part of banks which have been marking up the valuation of their bonds and stocks to correspond with the altered state of the market, and thus creating speculative values which "are not a good feature of the market situation to-day."

The Journal of Commerce sees a tendency toward the issuance of an undue proportion of bonds to stocks, largely because of the fact that until very recently business conditions have been frightening off the investor from new stock issues. Of course, "the effort to induce him to come back as a stockholder by issuing bonuses with stock or watering the capital may be successful," but, we are told, it "contains its own dangers for the reasons that have already been outlined."

These, then, are some of the symptoms that the return of prosperity is being pushed too hard. There are signs of it in connection with selling and merchandising, as well as with finance:

In some industries it is reported that there has been a certain laxity in credit methods, coupled with price concessions extended to individual buyers and the like. Some of the banks find that the statements of their customers are not altogether satisfactory in this respect owing to the presence of too large an element of open accounts representing sales made on long

Save This New Way

Make the money you work for, work for you. And make it earn more interest. Investigate the new savings system offered by the U. S. Treasury Department.

THIS tells how \$20 soon becomes \$25, how \$80 soon becomes \$100, how \$800 soon becomes \$1000. It shows you how to earn 25 per cent in five years. And all with the greatest safety.

The United States Government, through the Treasury and Post Office Departments, has recently developed a new Savings System, which has received a spontaneous welcome from men and women throughout the Nation.

Begin Now

The advantages of this system are many—too numerous to list here. But everything is explained in a descriptive circular obtainable from your Postmaster or by sending direct to the United States Government Savings System, as addressed below.

Note some of the outstanding advantages: Any individual can buy up to \$5000 maturity value of Treasury Savings Certificates of any one issue, and if desired can have them made payable to another person in case of death. The Certificates are exempt from normal Federal Income Tax and from state and local taxation (except estate and inheritance taxes).

Learn all the advantages now offered by this new Savings System. See how to accumulate savings faster. And with complete safety. Once you know this simpler, more profitable way, you will surely adopt it, as thousands of others are doing throughout the land.

How Dollars Grow

Below are shown the results of investment in Treasury Savings Certificates—how your money grows when interest is compounded semi-annually. It shows how to make the money you work for, work for you. And all the time with absolute safety. Observe how soon you will earn 25 per cent at present issue prices—in only 5 years your \$20 becomes \$25, your \$80 becomes \$100, your \$800 becomes \$1000.

Issue Price	Value after one year	Value after two years	Value after three years	Value after four years	Maturity
\$20	\$20.70	\$21.45	\$22.20	\$23.00	\$ 25
80	82.80	85.80	88.80	92.00	100
800	828.00	858.00	888.00	920.00	1000

The System is simple. It consists of new U. S. Treasury Savings Certificates, yielding at present issue prices, $4\frac{1}{2}$ per cent interest, compounded semi-annually, if held to maturity. They mature in five years, earning 25 per cent for that period.

But they can be redeemed at any time before maturity, at redemption prices which increase from month to month, yielding about $3\frac{1}{2}$ per cent compounded semi-annually, so that your savings are constantly earning, yet are available in emergency.

4½% on Savings

Treasury Savings Certificates present an ideal form of investment, fully protected, and with a liberal rate of interest. Each dollar saved earns 25 per cent in 5 years at present prices, which is at the rate of $4\frac{1}{2}$ per cent a year, compounded semi-annually. If withdrawn before maturity you receive interest at the rate of $3\frac{1}{2}$ per cent, compounded semi-annually.

Safety

These Certificates are a direct obligation of your government, the soundest investment conceivable, backed by the strength of the Nation. Your principal and interest are absolutely safe. Risk is eliminated. Certificates are registered in your name at time of purchase, protecting you against loss or theft.

Certain Value

The Certificates are not subject to market fluctuations and cannot depreciate in value. They are always worth what you paid for them plus the interest.

Payment on Demand

You can withdraw your money at any time, without waiting until maturity of the Certificates. This provides for any emergency. The Government, however, cannot call them for redemption before maturity.

Invest to the Limit

U. S. Treasury Savings Certificates are issued in denominations within the reach of all. You can now buy a \$25 Certificate for \$20, a \$100 Certificate for \$80 and a \$1000 Certificate for \$800.

If you save less than \$20 per month, you can accumulate Postal Savings Stamps at 10c each, or Treasury Savings Stamps at \$1 each, both non-interest-bearing. Or you can open an interest-bearing Postal Savings Account. Then you can convert such savings into a Treasury Savings Certificate when you accumulate \$20.

U. S. Treasury Savings Certificates may be purchased at Post Offices, Federal Reserve Banks, banks and trust companies, or direct from the U. S. Government Savings System. There is no red tape, no formality.

Do not delay in becoming acquainted with this simpler, more profitable system of making your dollars grow. Make the money you work for, work for you. See how quickly it earns 25%.

Investments for July Funds

DURING July, investors will receive in dividends and interest several hundred millions of dollars.

Conditions have changed rapidly in the securities market, and in the investment of your income many new problems may present themselves.

Should you buy long or short-term securities? What rate of yield should you reasonably expect? How can proper diversification be obtained? Would tax-exempt securities give a better yield considering your income, than other types?

We can assist you in answering such questions as these. Call at our nearest office or send us a list of your investment holdings, and we shall be pleased to give you our recommendations.

OUR MONTHLY BOOKLET

serves many investors as a guide to the purchase of securities. It contains a diversified list of government, municipal, railroad, public utility, and industrial bonds of attractive yield. The July issue will be sent upon request.

INVESTMENTS AND FINANCE

Continued

terms. The question whether such a danger exists widely throughout the country can not be answered absolutely, but there is good evidence that it does exist in the more highly centralized and specialized trades.

In the opinion of careful banking observers the business situation, instead of facing an open path to full prosperity, has a good many obstacles still to overcome and needs to be governed by an unusual degree of conservatism. The price situation has been stable for a good many months, a fact which renders it possible to make forward contracts with confidence. But of late there has been renewed tendency toward the advancing of prices in basic lines, and there is evidence that such advances have been extended into the field of consumable commodities. With prices as high as they are to-day this may lead to disturbance of business conditions and sharply tend to check the increasing demand for goods. Current financing is hampered by the fact that such a possibility is evidently recognized.

"WHY WET-NURSES FOR BIG BUSINESS?"

THIS questioning protest is brought from the editor of *Forbes Magazine*, as he ponders over the way "wet nurses" have been called in to take charge of different industries. Have our business men lost their self-reliance, their ability to work out their own big industrial problems without the aid of super-bosses or dictators? If they have, it does not speak well for them, thinks this writer, who remarks:

The moving-picture people concluded that they couldn't run the industry themselves; so they called in Will Hays to save them. Our baseball magnates also reached the conclusion they needed some one to take hold of the reins; so they placed the supervision of their affairs in the hands of Judge Landis. It is announced that the vast building industry, feeling that a guardian is needed for it, plans to send an S.O.S. to Franklin D. Roosevelt, former Assistant Secretary of the Navy, who is to be given powers equal to those of Hays and Landis.

The explanation given in each case has been that the industry was losing the confidence of the public, and that some heroic measure was necessary to prevent worse demoralization and possible disaster.

Is not this a tragic commentary upon the ability, the caliber, the character of the leaders in these industries? Doubtless other industries will take similar action if these experiments work out satisfactorily, for certainly some other industries need statesmanlike direction. The anthracite coal industry very badly needs some one to take hold of it and make those engaged in it toe the line. The theatrical business also needs a Hays or a Landis. The milk industry is another that needs some one of weight and power at the helm.

The reasons responsible for this unique innovation are not complimentary to those who have been obliged to resort to it. Is there not likelihood that the next step will be to have all these wet-nurses, or super-bosses, or whatever you choose to call them, named, not by representatives of the industries, but by the representatives of the people, the Government?

Which Course Will You Follow?

The ways in which two men invested their savings, and the results in each case, are described in our new pamphlet "Two Men and Their Money."

TO ELIMINATE WASTE BY STANDARDIZING

ENORMOUS as is the annual waste in this country through preventable fires, the American Exchange National Bank asserts that "it is small compared with the annual waste resulting from the reckless employment of capital in the wasteful production of various sizes and styles of essentially like things." Some progress has, indeed, been made in eliminating this form of waste through standardization, but the advance, insists the New York Bank in its June letter, has really been very slow. We are told that even a simple and moderate extension of the principle of standardization in manufacture would release as much capital for general use as goes into the savings banks each year. The argument runs as follows:

The average man understands the value of saving, because if he sets aside a part of his personal income he is sure to derive a direct benefit. His interest in saving on a national scale through a reduction in fire waste and through the elimination of varieties and styles in production is small, because the benefits to be derived are less direct, altho in the long run they are perhaps more desirable than the immediate benefits he derives from the investment of personal capital. Under our system, the accumulation of capital is automatic; even if the number of individuals who save should be small, the aggregate savings under fair standards of living would perhaps equal the savings that would be accumulated by a larger number of savers. National habits of saving are nevertheless to be preferred if for no other reason than that they tend to prevent extravagance in an age and time in which extravagance would result in the retardation of progress.

Popular consent to waste elimination through standardization is essential, however, and it is just as necessary that the average man be made to understand the advantages of eliminating waste in this way as it is that he have the habit of saving. Objectors to standardization usually appeal to the prejudices of the average man; he is told, for example, that under standardization the women would all wear hats of the same design and coloring; that all clothing would be cut to a uniform pattern and that in a short time we should all be living a routine existence, moving about in regimented masses and to the best of time clocks. The term standardization, as it is applied in practice, has no such significance as that; in practice its significance is largely what the world implies—dimensional.

The engineer who refers to standardization—and it is the engineer who is the principal advocate of the thing called standardization—is thinking of a pipe or a bolt on which the threads conform to a fixed standard, thus eliminating the necessity for carrying large stocks of pipes and bolts whose only difference is in the width or direction of the thread. The manufacturer of mattresses is an advocate of standardization in bed sizes, because the limitation of beds to standard sizes allows him to reduce the number of sizes he must carry in his stock of mattresses. The same principle runs through all industry, and such simple and necessary standardization as here outlined, if generally followed, would, perhaps, annually release as much capital for employment in other fields as goes into the savings banks each year.

CLEAN-CUT BANKING

Banking service of a clean-cut, definite character, capable of handling with energy and understanding every phase of large financial matters, is one of the essentials in the successful development of the nation's business.

The Continental and Commercial Banks, because of their financial strength, varied experience and complete organization, are able to offer to American business men that kind of banking service.

MACGREGOR

STEEL SHAFTED CLUBS

From all parts of the country come almost daily words of praise for our line of Bristol Steel Shafted Clubs in both Wood and Irons. They are durable, uniform in balance, impervious to all climatic changes, always the same.

By all means try one of these Steel Shafted MACGREGORS. We offer them in a wide range of models as shown in the illustration. Many persons who have tried one club have soon bought more—and that may be the way you'll feel. So give this Steel Shaft a trial anyway. The price is \$8 each with wood heads in all standard models and \$7 for irons. Ask your Pro or Dealer.

Any one or all of the following booklets will be gladly sent upon request:

1. "Golf, the Game of Games" (an introduction to golf).
2. "Stepping Stones to a Golf Course" (helpful suggestions for laying out a new course).
3. Complete General Catalog.

CURRENT EVENTS**FOREIGN**

June 7.—France refuses to agree with the plan of the Reparations Commission to authorize the international bankers meeting in Paris to scale down the reparations payments. Premier Poincaré declares that France will press for full payments from Germany.

June 8.—British troops crush the last Sinn Fein stronghold in Ulster when they drive the republican forces from the fortified village of Belleek.

Examination of the proposed constitution of the Irish Free State shows there is no radical conflict between its provisions and the terms of the Anglo-Irish treaty, according to a dispatch from London.

General Wu Pei-Fu, dominant Chinese leader, and General Chang Tso-Lin, Manchurian war lord, are reported to have agreed on an armistice, pending a discussion of permanent peace.

King Alexander of Jugo-Slavia and Princess Marie of Roumania are married in Belgrade.

Eight enlisted men from the United States gunboat *New Orleans* are drowned in Amur Bay, Siberia.

June 9.—The interallied bankers meeting at Paris find it impossible now to recommend a loan to Germany, and issue a statement advising European countries that if there is to be a loan to Germany there must be a reduction of the German reparations debt and a general adjustment of Allied war debts, and that the nations must work together harmoniously.

June 10.—The South China Government of Canton, under the presidency of Sun Yat Sen, will refuse to cooperate with the new Northern Government of Peking for the unification of China, it is announced from Canton.

June 11.—The British Government's reply to Premier Poincaré's memorandum of June 1, concerning the condition of the French Government's participation in the Hague Conference, contends that it is solely for the Russian Government to decide whether to make restitution of private property or pay compensation, and that to assume that Russia is not a sovereign state is a waste of time.

Admiral Baron Kato assumes the premiership of Japan with the avowed intention of carrying out the agreements of the Washington Conference and on condition that the Army leaders adopt a general policy of retrenchment.

President Li Yuan-Hung, of the North China Government, appoints as Premier Dr. Wu Ting-Fang, of the Canton Cabinet, as a move toward bringing north and south China under a single government.

June 12.—Premier Poincaré replies to the British memorandum on the Hague Conference in a note insisting that Russia must return private property to its former owners, and that investigation of conditions in Russia must be the basis of aid to economic restoration.

June 13.—Three hundred persons are reported drowned and many others missing following an abnormal rise in the Acelhaute and Arenal rivers at San Salvador, Republic of Salvador.

Premier Lloyd George receives another vote of confidence when the House of

Every Banker Should Have These Facts!

YOU CAN now offer your customers greater security for the valuables they place into your care at no greater cost than that of ordinary vault equipment. Whether you are now planning new or additional safe deposit installations for your vaults, you will be interested in "INVINCIBLE."

Here are a few reasons why INVINCIBLE BOXES will interest your customers—read them.

"Top-and-Bottom Door Bolts"
Stop Prying

The "Lock Behind the Lock"

A barrier against lock-punching and door sledging

Fourteen Tumbler Double Cylinder Cast Bronze Lock with Corrugated Renter's Keys
Requiring Guard Key

The "TOP-AND-BOTTOM DOOR BOLTS" operate exactly as the bolts in your vault door.

The "LOCK BEHIND THE LOCK" is a safeguard against the methods by which 95% of all safe deposit robberies are made.

INVINCIBLE Boxes are Triple-Locked in one operation with substantial corrugated renter's keys that impress confidence for the bank using them. Doors are protected against marring and cannot rust.

INVINCIBLE Boxes are built in uniform sections to form any sized installation. Then "Add a Section At a Time." Special Sections to fit every inch of vault space. In successful service in many banks, both large and small.

Toy-Making Secrets

No longer will the Germans and Japanese monopolize the toy-making business. Formerly guarded secrets of this profitable industry are now published in a new book, by J. F. Makinson, entitled—

"TOY MANUFACTURE"

which tells you how to begin commercial toy making, on a large or small scale; shows how to make picture blocks, "living beans," and all sorts of wood and metal toys, beautiful dolls, beads, marbles, balls, bats, dominoes, etc.; tells what mechanical equipment and materials you need and describes every detail of manufacture. The author had years of experience as a craftsman in German toy factories and his 268-page book, with its 200 illustrations, will guide you to success in the toy-making industry.

Crown 8vo. Cloth. \$1.50, net; \$1.62, postpaid.
FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York

Commons rejects by a vote of 205 to 111 a resolution to reduce the cost of his Cabinet secretariat.

The French Cabinet decides to send a commission of experts to the Hague Conference.

DOMESTIC

June 7.—Replying to Senator Watson's criticism of him for publicly discussing the tariff duties, Senator Ricci, the Italian Ambassador, says they are an international problem and as such are a proper subject for discussion by a diplomatic agent of a foreign country.

Three high officials and 34 alleged members of the Ku Klux Klan are indicted by a Grand Jury in California on felony charges connected with a raid in Englewood in which one man was killed and two were wounded.

June 8.—President Harding announces he is responsible for the policy which the Government has adopted with reference to the naval oil reserves, including the Wyoming reserve known as "Teapot Dome."

The Brotherhood of Locomotive Firemen and Enginemen, in convention at Houston, Texas, adopts a resolution declaring President Harding to be an enemy of organized labor, and urging his defeat for reelection.

June 9.—Ambassador Ricci is advised by Secretary Hughes that the tariff question is a domestic issue and that it is the American view that foreign diplomats may present their views only through the customary diplomatic channels.

June 10.—William Huesse, head of the Janitors' Union of Chicago, and nine other officials of that organization are convicted on charges growing out of the recent terrorism inaugurated by labor in Chicago.

June 11.—Over 60 known dead, drowned or killed by falling debris, and many missing is the toll of a violent storm that sweeps New York and vicinity.

Strike ballots, authorized in April, and returnable July 1, are mailed to 400,000 railway shopmen as a result of the wage-cutting decision recently issued by the United States Railway Labor Board.

June 12.—Organized labor wants round-table conferences with employers on a basis of equality, declares Samuel Gompers, President, before the 42nd annual convention of the American Federation of Labor, meeting in Cincinnati.

A disastrous fire in Passaic, New Jersey, causes \$500,000 damage and renders 200 people homeless.

June 13.—In a letter to Chairman Campbell of the House Rules Committee, just made public, President Harding serves notice that unless the ship subsidy bill is favorably acted upon, he will call an extra session of Congress to consider it.

Net incomes reported to the Government during 1920 increased by nearly \$4,000,000,000, and the number of returns by nearly 2,000,000 over 1919, while the taxes received fell off about \$195,000,000, according to preliminary statistics issued by Internal Revenue Commissioner Blair.

The number of aliens to be admitted into the United States during the coming fiscal year under the 3 per cent. restrictive immigration act is fixed by the Labor Department at 357,903, as compared with 355,820 last year.

Communication!

THE manufacturers of the new Light-Running, Quiet-Running Royal believe they have achieved in it the ultimate design of typewriter; the final word in simplicity, balance, strength, practical quietness and speed. And the gratifying results it is giving today in hundreds of progressively managed offices more than justify this belief.

Communication is one of the two great agencies that have made mighty nations out of struggling colonies and transformed lone trading posts into bustling centers of commerce. And how vital a factor in modern systems of communication is the typewriter! It actually prepares the majority of business messages and authenticates most of the others—"confirmation to follow".

No miraculous invention made this new Royal possible. It is simply the result of a long, undiverted quest for the one typewriter—without complicating embellishments—that would so nearly approach perfection as to stand unequalled for years to come and probably never be surpassed.

The Light-Running, Quiet-Running Royal is the typewriter of the future available today!

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address Department D.

THE ▾ SPICE ▾ OF ▾ LIFE

All In.—**LACONIC TOURIST**—"Information given out here?"

TIRED CLERK—"It has."—*Boston Transcript*.

Fashion Note.—Women's hats, it is said, are to be larger. And the milliner's bill, no doubt, will be an affair of extra sighs.—*London Opinion*.

The Kind We Sometimes Eat.—**FOR SALE**—Two thoroughbred blue Antediluvian roosters. W. J. T.—*Classified Ad in The Tribune-Republican, Meadville, Pa.*

A Recipe.—To avoid a colorless existence, keep in the pink of condition; do things up brown, treat people white, be well read, and get out onto the golf green under the blue occasionally.—*Boston Transcript*.

Atonement.—Mr. Graham Bell has devised an apparatus for condensing air into water, to be used by travelers in the desert. Mr. Bell is the inventor of the telephone, and he seems to be endeavoring to make amends for his early indiscretion.—*London Opinion*.

We Live to Learn.—"I never knew till I got a car," said Bishop Eightly, "that profanity was so prevalent."

"Do you hear much of it on the road?"

"Why," said the Bishop, "nearly everybody I bump into swears dreadfully."—*Philadelphia Inquirer*.

A Lingering Hate.—**COMEDIAN**—"Poor old Harry got the bird properly last night. They hissed him right off the stage. Then I came on. The audience quietened down and listened to my first number with every attention. Then, just as I was giving 'em my patter, *blowed if they didn't start hissing old Harry again.*"—*Punch (London)*.

Jogging His Memory.—It was a thrilling story that McGregor had to tell.

"I had abandoned all hope," he said. "As I sunk for the third time my past life seemed to rise before me in a series of grim, realistic pictures."

A murmur of sympathy rolled from the lips of listening friends; but just as McGregor was preparing to resume, McTavish interrupted him sharply and hopefully.

"And did you happen to notice," he asked, "a picture of me lending you a fiver in the autumn of 1919?"—*The Continent (Chicago)*.

In Bad Company.—When a vote is to be taken on some important measure, a Congressman who can not be present "pairs" himself with some Representative who would vote "aye" to the Congressman's "nay," or *vice versa*. Once a Democratic member of the House received a letter from an active politician of that party in his district, calling attention to the fact that he was reported in the *Congressional Record* almost every day as being "paired" with a Republican. "I don't doubt your loyalty to the party," read the letter; "but I think the boys would like it a good deal better if you paired with Democrats instead of Republicans."—*Harper's Magazine*.

In the Rough.—"Sir, I have all the gems of English literature in my library."

"Yes, and I notice that they are uncut gems."—*Gaboon*.

Our Post-War Forest.—Great family trees in America are few, but it is probable that many new ones were started during the war by grafting.—*Baltimore Sun*.

A Contingent Worker.—"Ah wants a day off, boss, ta look for a job faw mah wife."

"And—if she doesn't get it?"

"I'll be back to-morrow."—*Phoenix*.

Preparedness.—A Mexican revolutionary, treated in a New York hospital, had twenty-two bullets extracted from his body. It is said that he had to have this done in order to make room for more when he returned home.—*Punch (London)*.

Current Humor.—Once there was a conductor who was not satisfied with his wages, and left. The next day while looking for a job he happened to step on the third rail. Did he get killed? No. He was a non-conductor.—*Science and Invention Magazine*.

Getting Him Going.—**FATHER** (from upstairs)—"Helen, isn't it time for the young man to go home?"

YOUNG MAN—"Your father is a crank."

FATHER (overhearing)—"Well, when you don't have a self-starter a crank comes in mighty handy."—*Boston Transcript*.

Reprisals.—**WIFE**—"Where, might I ask, have you been till this hour of the morning?"

HUSBAND—"W—why, round at the c—club, of course, c—c—considerin' of a strike."

WIFE—"Well, you go back to your club and consider it a lock-out!"—*London Mail*.

Enthusiastic Convert.—Dr. James Melvin Lee, head of the Department of Journalism in New York University, said during the course of an after-dinner speech: "The average person, as well as the average nation, is blind to his own faults. An American woman, a leader of the S. P. C. A. was soliciting subscriptions for the animals' cause in Madrid. 'Will you subscribe, sir?' she asked a Spanish grandee.

"I'll do better than that, madam," said the grandee graciously. 'I'll get up a bullfight for your society's benefit.'"—*The Argonaut (San Francisco)*.

Efficiency First.—An applicant for work at the Ford plant asked a veteran Ford employee if it were true that the company was always finding methods of speeding up production by using fewer men. The veteran replied:

"Most certainly. In fact," he continued, "I just had a dream which illustrates the point. Mr. Ford was dead and I could see the pallbearers carrying his body. Suddenly the procession stopt. Mr. Ford had come to life. As soon as the casket was opened he sat upright, and, on seeing six pallbearers, cried out at once: 'Put this casket on wheels and lay off five men.'"—*Wall Street Journal*.
